About Sāsanārakkha Buddhist Sanctuary

Founded in the year 2543 BE (Buddhist Era; i.e. 2000 CE), it throughout has been the main objective of Sāsanārakkha Buddhist Sanctuary (SBS) to provide high-quality theoretical and practical tutelage to bhikkhus of the Theravāda. It is a sanctuary for the protection (*ārakkho*) of the Buddha's teaching (*buddhasāsanaṃ*), heightening knowledge and wisdom in theory and practice. Suitably for these ends, SBS is situated within an extended primary forest near Taiping city in north-western Malaysia. Tailored individual spiritual consultations are offered besides guidance in the form of readings and discussions of the four main *nikāyas* and selected texts from the *Khuddakanikāya*, periodical *vinaya* classes and manual skills courses (sewing, broom making etc.) relating to the craft (*sippaṃ*) of a bhikkhu. The rules and regulations as found in the Pāḷi *vinaya* (monastic discipline; i.e. the *Bhikkhuvibhaṅga* and the *Khandhakas*) comprise the most fundamental community guidelines for monastics residing at SBS.

Acknowledgments

I would like to thank, first and foremost, Ā. Ariyadhammika (Austria) as *saṅghanāyaka* (“leader of the community”) of Sāsanārakkha Buddhist Sanctuary (SBS), especially for allowance to pursue my studies in full-time. I also wish to express my thanks to Ā. Bodhirasa (South Africa) for pointing out flaws in the chapters “Sandhi” and “Morphology” and to Ā. Pāladhammika (U.S.A.) for reading through a preliminary draft, giving perceptive feedback. Sayalay Cālā Therī (Aggācāra International Education and Meditation Centre, Myanmar) readily responded to numerous of my queries with insightful comments. I value and recognize her input. Ā. Sujāta (Germany) and Ms. Looi Sow Fei (Malaysia) also went through a draft of the entire book; I am thankful for all the mistakes they spotted.

I appreciate and am grateful for the discussions with Dr. Bryan Levman (University of Toronto, Canada) about many points and his kind willingness to fully review an earlier draft version – the quality of this work would have suffered much without his suggestions. Despite his teaching obligations, Prof. Dr. Thomas Oberlies (Universität Göttingen, Germany) kindly undertook to review substantial parts of the present grammar; I prize his insightful assistance, without which it would have suffered a sizable degradation in quality as well. I wish to thank Dr. Alastair Gornall for his occasional help. The efforts of Dulip Withanage and his wife Kanchana Ranasinghe (both Sri Lanka) are recognized with gratitude. They helped with needed book scans from the University of Heidelberg’s library, thus being a prop for the completion of my studies. Much thanks is also due to Stefan (Germany) and Lamai (Thailand) Köppl who, in like manner, acted very supportively. May the spiritual merit (*puññaṃ*) generated with the creation and donation of this work be dedicated to the welfare of their recently deceased father (Rudolf Köppl, dec. 2020) and mother (Malai Namnuan, dec. 2021) respectively, all beings as a whole and for the longevity of the Buddha’s teaching.

Introduction

Grammar and phonetics are a vital part of the indigenous Buddhist traditions, right from the era of the Teacher's (i.e. the Buddha's) floruit and throughout history up until modernity, constituting not only the foundation for preaching the *dhamma* to the people but also for understanding the subtleties of it in the first place (Subhūti, 2018: 4). Thus, we find evidence that those disciplines were invested with integral significance already in the nearly ubiquitously accepted earliest layers of Buddhist lore, to quote the *Aṅguttaranikāya*:

These two things, bhikkhus, lead to the confusion and disappearance of the good *dhamma* (*saddhammo*); which two? Badly- (or “wrongly,” “incorrectly”) settled words and syllables (or “letters”) and misinterpreted meaning. Bhikkhus, the meaning of badly-settled words and syllables is misinterpreted [...]. These two things, bhikkhus, lead to the continuance of the good *dhamma*; which two? Well-settled words and syllables and well-interpreted meaning. Bhikkhus, the meaning of well-settled words and syllables is well interpreted (AN II: 7 [AN 2.20]).¹

Bearing that in mind, the attempt to elucidate, elaborate upon and enrich the grammar of the Pāḷi language as undertaken with the present work seems a meaningful endeavor.

This Māgadhābhāṣā (Pāḷi) grammar, as it is named, was originally not intended to reach the extent it has now. The initial prospect was to create an informal and more or less makeshift conglomerate of relevant material mainly for personal studies and general use. However, the inspiration roused by the thought about the spiritual merit (*puññaṃ*) gained by creating

¹ *Dveme, bhikkhave, dhammā saddhammassa sammosāya antarahānāya saṃvattanti. katame dve? dunnikkhitaṇṇa padabyañjanaṃ attho ca dunnīto. dunnikkhittassa, bhikkhave, padabyañjanassa atthopi dunnayo hoti [...]. dveme, bhikkhave, dhammā saddhammassa tṭhitiyā asammosāya anantaradhānāya saṃvattanti. katame dve? sunikkhitaṇṇa padabyañjanaṃ attho ca sunīto. sunikkhittassa, bhikkhave, padabyañjanassa atthopi sunayo hoti [...].*

and sharing something more fundamental and reliable by investing just some extra labor (quite a bit in the end actually) led to the initial makeshift design being worked upon to lose its rough edges and growing in bulk.

With that, the aims, methods and rationales of the present Pāḷi grammar are as follows: (a) Lubricating access to the information contained in numerous modern Pāḷi grammars written in English by collating the dispersed material contained within them. People who wish to learn about grammatical rules and principles – either on a broader spectrum or at all – are compelled to track them down in the thicket of the widely scattered grammar inventories as separately given by the various available grammars. These works, mostly fine and outstanding works of scholarship in their own right, each individually often contain valuable data and perspectives not found in the other ones, and these are attempted to be distilled and presented with this Pāḷi grammar. (b) Facilitating identification of and providing explicit reference to most of the grammatical rules contained in the *Kaccāyanavyākaraṇam*² (*Kaccāyana*), the oldest extant Pāḷi grammar, as well as to selected ones from other traditional grammars. The complete lack of or just sporadic referencing to the indigenous grammars – a commendable exception to this being Collins’s *A Pali Grammar for Students* (2006) – is not a trifling defect. Not to say that the content which is tendered in such manner is thereby flawed per se, but it possibly presents disbenefits for a variety of individuals, such as those who wish to gain familiarity also with the source grammars or those who are more skeptical by nature about the

² Also *Kaccāyanavyākaraṇam*: *kaccāyana* + *vyākaraṇam* → *kaccāyanavyākaraṇam* (“the grammar of *Kaccāyana*”). The 19th century Sri Lankan scholar bhikkhu Subhūti (2018: 4) explains: “*Vyākaraṇa* is the science of writing and speaking a language without fault and of understanding the intentions of texts by knowing all the divisions and syntactic relations of a language’s expressions. *Vyākaraṇa* is not exclusive to one language but is for all languages. Some languages that were used in former times, however, do not have complete grammars since the principal users of these languages were uncivilised and were of weak intellect. The existence of a very complete and pristine grammatical literature in Sanskrit and Pali, by contrast, is a testament to the sharp intellects of the users of these languages.”

validity of unreferenced material. To my knowledge, neither such a blend as attempted here nor the consistent referencing to classical grammars has been effected as of this writing, so that some benefit – however small – might hopefully be derived for the reader from the following pages. This potential benefit will, it is hoped as well, not suffer much from the following limitations of the present grammar.

- It does not throughout throw into relief the different ancient grammarian’s views and presentations (that of Moggallāna, Aggavaṃsa etc.).
- Some informative modern grammars have not been taken into consideration.
- It does not deal with prosody.

The structure is primarily modelled after that of Kaccāyana and references (incl. page numbers) to works in the Pāḷi language as well as quotations from them are directed to and from the *Chaṭṭhasaṅgāyana* editions (PDF files) of the Vipassana Research Institute, Igatpuri, India, also commonly known as the Burmese edition (B^e), with the exception of two quotations from European editions (E^e). Since traditionally proper names and titles of books are not capitalized in the Pāḷi language, this practice is continued here for the actual Pāḷi texts quoted; however, it is, for obvious reasons, discontinued for such individual Pāḷi words contained in the running text written in English.

Those who are not interested in word formation and derivation but mainly wish to have an avenue quickening access to specific rules – and thereby to the Pāḷi texts themselves – may skip entire chapters³ and/or the sections on formation contained within most of the remaining ones. They may directly proceed to those parts of the book discussing actual usage, holding the most relevant information for comprehending the syntax and meaning of the Pāḷi text they wish to understand. Let it be finally remarked, however, that a proven way to gain a broader and deeper

³ Primarily the chapters “Sandhi,” “Morphology,” “Kīta and Taddhita Affixes” and “Uṇādi Affixes.”

grasp of the Pāḷi language is to get also familiar with word formation and derivation principals; therefore, it is recommended.

Pāḷi – Historical Backdrop

Pāḷi is one of the Middle Indo-Aryan (MIA) languages, itself part of the Indo-Aryan language family. The broad classification of Indo-Aryan languages can, on linguistic grounds,⁴ be chronologically subdivided in the following way (Das, 2006: 3; Gair, 2007: 847; Oberlies, 2007: 164; Witzel, 2009: 47):

1. 1500 BCE – 600 BCE: Old Indo-Aryan – Vedic (Ṛgvedic Sanskrit and its dialects), Classical and Epic Sanskrit.
2. 600 BC – 1200 CE: Middle Indo-Aryan – Pāḷi, Prākṛt (Prakrit), Ardha-Magadhī, Māharāṣṭrī, Gāndhārī, Sinhala Prakrit, Buddhist Hybrid Sanskrit etc.
3. 1200 CE – present: New Indo-Aryan – Hindu/Urdu, Sinhala, Dardic, Panjabi, Dogri, Nepali, Bengali etc.

The corpora of early Buddhism have initially and in the first few centuries after the demise of the Teacher been transmitted in four of these Indic languages at a minimum: (1) Pāḷi, (2) Classical Sanskrit, (3) Gāndhārī and (4) Buddhist Hybrid Sanskrit (Edgerton, 1953: 1). As the title of this book suggests, only the Pāḷi language will be singled out and considered in the expositions contained in this grammar.

Basing himself upon morphological and lexical features, Oberlies (2007: 164) states that Pāḷi cannot be a direct continuation of Vedic, but Geiger (1916/1956: 1) and Pischel (1957: 4) stress its closer relation to Vedic rather than Classical Sanskrit, the latter from which Pāḷi, they maintain, cannot directly be derived. Wackernagel (as quoted by Karpik, 2019: 55) and others (Karpik: 55; Oberlies: 161) argue for a parallel development of Vedic and the Prakrits in general, among which Pāḷi and the other Middle Indo-Aryan dialects are sometimes classified (Geiger:

⁴ This classification scheme is not strictly applicable on historical grounds; MIA languages are older than Classical Sanskrit.

1; Norman, 1983: 7). Pischel (p. 4) maintains that “[...] it does not seem probable that all the Prakrit dialects sprang out from one and the same source.” Woolner (1999: 3) and von Hinüber (2001: 43), on the other hand, see them as (essentially) derived from Vedic. For Levman (2019: 96, n. 32) “the actual answer appears to lie in the middle.” In any case, the antiquity of Pāli among the Middle Indo-Aryan languages and largely Sanskrit-independent grammatical traditions were given as reasons to let Pāli stand apart from the Prakrits (Klein et al., 2017: 319).

Pāli – Derivation and Orthography

The word “Pāli”⁵ (also “Pāli,” “Paḷi” and anglicized “Pali”) was stated to be a Dravidian loanword meaning “row,” “line” and in the Pāli Buddhist tradition later also “norm,” “text” (Levman, personal communication, April 28, 2020; Mallik, 1970: 78, 81; PED, s.v. “Pāli/Pāḷi”), being an equivalent to *tanti*, meaning “string,” “sacred text.” We also find medieval and modern attempts to derive it from within the indigenous grammatical system of the Pāli language itself as well as from Sanskrit. The dictionary reference provided above sees a connection with Sanskrit *pālī*⁶ (“dam,” “dike,” “bridge”), but Gombrich (2018: 11) suggests a derivation from Sanskrit *√paṭha* (“to recite”) instead. The autochthonous Pāli grammar of Moggallāna,⁷ however, maintains a connection to the Pāli *√pāla*, explained as having the meaning of “protecting,” as it has in Sanskrit⁸ (Mogg: 147). It explains: *atthaṃ pāti rakkhatīti pāli* – “Pāli: ‘It protects and keeps watch over the meaning.’” Childers (s.v. “Pāli”) quotes an anonymous grammatical work being along the same lines as Moggallāna just referred to: *saddatthaṃ pāletīti pāli*, which he renders as: “Text is so called because it protects the

⁵ IPA: /'pa:li/; abbr. “pi” (ISO 639–1) or “pli” (ISO 639–2 and 3).

⁶ Skt. *√pālā*.

⁷ Fl. ca. 1165 CE (Jayawardhana, 1995: 156).

⁸ *Pāto ḷi. pātismā ḷi hoti. atthaṃ pāti rakkhatī ti pāli tanti* – “ḷi after the [verbal base] *pā* ‘to protect’. *ḷi* occurs after the [verbal base] *pā* ‘to protect’. It protects (*pāti*), [i.e.] guards (*rakkhati*), the meaning, therefore, it is *pāli*, [i.e.] a sacred text (*tanti*)” (Alastair Gornall [Trans.]; personal communication, May 4, 2020).

sense of the words.” If we accept Jayawickrama’s (2003) claim that it is not possible to derive “Pāli” from Sanskrit *pāṭha* (√*paṭha*) since no such phonological change is attested, the constructions of Moggallāna and the dictionary explanations are the preferred choice.

Pāli – the Name of a Language

Nowhere in the canon (*pāli*), its commentaries (*aṭṭhakathā*) or subcommentaries (*ṭīkā*) preserved within the Pāli tradition is mention made of a language with the name “Pāli.”⁹ In the *aṭṭhakathā*, it is used solely in the sense of “text” and predominantly as “canonical text,” but not exclusively (Norman, 1983: 1; von Hinüber, 1977/1994: 85). This can be understood from the numerous commentarial expressions making a clear distinction between canon and *aṭṭhakathā*.¹⁰ The *aṭṭhakathā* and *ṭīkā* literature termed the language of the *tipiṭaka* etc. in the following ways (not exhaustive):¹¹

- *Māgadhabhāsā* – “the language of Magadha” (Mp-ṭ II: 178): “Surely, when the the Perfectly Enlightened One committed the Buddha Word, the *tipiṭaka*, to the canon, it was done just by means of the language of Magadha (*māgadhabhāsāya*).”¹²
- *Māgadhavohāro* – “the common (or ‘popular,’ ‘current’) speech of Magadha”¹³ (Kkh-nṭ: 39).

⁹ It is also unknown to non-Buddhist traditions (von Hinüber, 1977/1994: 85).

¹⁰ E.g.: [...] *pāḷiyaṃ avuttampi aṭṭhakathāyaṃ vuttavasena gahitaṃ* – “[...] but it is not said in the canon (*pāli*) but taken here vis-à-vis the commentary” (Sp I: 300). See also Childers (s.v. “Pāli”) for a decent summary of further occurrences.

¹¹ See also von Hinüber (1977/1994) for further discussion.

¹² *Sammāsambuddhopi hi tepiṭakaṃ buddhavacanaṃ tantiṃ āropento māgadhabhāsāya eva āropesi.*

¹³ E.g.: *ettha ca ariyakam nāma māgadhavohāro*. Levman on the term *vohāro* (personal communication, April 28, 2020): “The word *vohāro* is derived from OI [Old Indian] *vy-ava + hṛ*, meaning ‘to carry on business,’ ‘trade,’ ‘deal in,’ ‘exchange,’ ‘have intercourse with’ etc. In other words, the very word *vohāro* confirms the existence of this koine.” What this “koine” is referring to is elaborated upon further down below.

- *Māgadhiko vohāro* – “the common speech belonging to Magadha”¹⁴ (Sp IV: 23).
- *Māgadhikā bhāsā* – “the language belonging to Magadha”¹⁵ (Moh: 75).
- *Ariyako* – “Aryan [language].”
- *Ariyavohāro* – “the current Aryan speech”¹⁶ (Sp I: 94).

This nomenclature landscape makes for the rationale behind selecting the title of the present grammar as it stands, despite most (but not all) scholars’ dislike of adopting that name for the language in which the lore of Pāli Buddhism was transmitted and in which it has been committed to writing – a language which was possibly even used by the Buddha himself (more on that further below in the section “Pāli – What is it?”). How, then, did it come about that we nowadays know that language under the name “Pāli” in the first place and not as it was known throughout, likely already in the nascent years of Buddhism?

Norman (1983: 1) figures it probable that a misunderstanding of the compound word *pālibhāsā* (“language of the canon [*pāli*]”), is responsible for the inception of the word “Pāli” as being used to denote the name of a language. He points to facts indicating a usage of the term “Pāli” in that confused sense in 19th century Sri Lanka and Burma (the work quoted mentioning *pālibhāsā*), in the case of the latter Burmese work likely even earlier. Cousins (2015: 119) draws attention to a few ambiguous instances of *pālibhāsā* in the *ṭikā* literature as denoting the name of a language but follows eventually von Hinüber (1977/1994: 90), who made it evident that the first attested use of the word “Pāli,” as referring to the language in which the Pāli Buddhist scriptures were handed down, was in the 17th century CE, both pointing to a letter (d. 1672 CE) of M. Laneau (as cited

¹⁴ *[S]akāya niruttīyāti ettha sakā nirutti nāma sammāsambuddhena vuttappakāro māgadhiko vohāro.*

¹⁵ *Sabhāvaniruttīti ca māgadhikā bhāsā, yāya sammāsambuddhā tepīṭakaṃ buddhavaṇaṃ tantīṃ āropenti* – “‘The natural tongue’: the language belonging to Magadha, with which the Perfectly Enlightened Ones commit the Buddha Word – the *tipīṭaka* – to the canon.”

¹⁶ E.g.: *[T]attha ariyakam nāma ariyavohāro, māgadhābhāsā.*

by Pruitt, 1987: 123–4) which relates his successful learning Siam and Pāli (Baly). Lastly, von Hinüber (p. 90) gives the 15th century CE as the terminus ante quem the term Pāli (or *pāḷibhāsā*) was not used in the sense it is nowadays and proposes a commencement at some time between the 15th and 17th centuries CE. He cites a Sinhalese work, which lists four languages among which is also the one of “Magada” [sic].

For Norman (1983: 2), it seems unlikely that this usage arose independently in all three major Buddhist countries. In any case, in traditional Buddhist countries both senses – i.e. the earlier commentarial and the somewhat later confounded sense – existed parallel to each other up to the present day; thus, to use the traditional nomenclature as elaborated upon above as well as the widespread modern variant seem uncontroversial and permissible in nearly all respects. However, scholars continue to hold certain reservations as to the legitimacy of allocating much linguistically relevant weight on a potential link between the Pāli language and languages or dialects as they were spoken in ancient Magadha, at least the Māgadhi dialect proper, and have proposed quite a plethora of opinions on what Pāli is and how and from what it developed – more on that in the subsequent paragraphs.

Pāli – What is it?

The *Handbook of Comparative and Historical Indo-European Linguistics* (Klein et al., 2017: 318) states: “It is generally accepted that Pāli as known from the Theravāda texts was a lingua franca, not a single individual language particular to one dialect area.” However, the scholarly discussions on the subject matter that have been consulted are of course somewhat more nuanced than that generalizing statement in its depiction of the status quo. They state, more specifically, that Pāli is either (a) some form of either a lingua franca,¹⁷ koine¹⁸ or standard dialect (Geiger, 1916/1956:

¹⁷ Merriam Webster (“Lingua franca,” n.d.): “[A]ny of various languages used as common or commercial tongues among peoples of diverse speech.”

¹⁸ Merriam Webster (“Koine,” n.d.): “[A] dialect or language of a region that has become the common or standard language of a larger area.”

4–6; Karpik, 2019: 67; Oberlies; 2007: 183; Roth, 1980: 78; Wynne, 2019: 9–10), (b) some form of a vernacular (Childers, 1875: xiv; Roth, 1980: 78; Warder, 1970/2000: 294) or (c) based upon one of these (Levman, 2019: 64–5, n. 1; Lüders, as quoted by Waldschmidt in Lüders, 1954: 8; Norman, 1989: 66; Rhys Davids, 1911: 53–4). There is also a dissensus as to the question if Pāḷi predominantly constitutes an artificially crafted language (Gombrich, 2018: 84–5;¹⁹ Norman: 65; von Hinüber, 1996: 5²⁰) or had developed mainly by natural means (Pischel, 1957: 5). It also has to be noted that the first-mentioned views under (a) above premise some actually spoken basis underlying the Pāḷi language, having been significantly morphed or superseded by contrived structures in the course of time – at least in part – and that the second-mentioned view does not assume that the language was safe from any form of change as it relates to redaction, transmission errors etc. Not one text-critically involved scholar, as far as I am aware of, is of the opinion that the Pāḷi as we know it has undergone no changes whatsoever.

The above-presented traditional accounts, reporting the language as found in the texts of the Pāḷi Buddhist tradition to be *māgadhābhāsā* etc., are by and large considered incorrect by modern scholars. They adduce, inter alia, the peculiar features of the Māgadhī dialect proper as inferred from the Aśokan inscriptions and the medieval descriptions of it by the Indian grammarians and determined these features to be (a) *l* instead of *r* (e.g. *lāja* – *rāja*), (b) *a*-stems in *e* for *o* (e.g. *lāje* – *rājo*) and (c) palatal *ś* for dental *s*. However, based upon inscriptional and other evidence, Norman (1980: 68–9) demonstrated that these features were found merely within a relatively restricted area and that it is feasible to regard the home of Pāḷi as being outside the region where the true Māgadhī was spoken but

¹⁹ Gombrich holds that the Buddha was the progenitor of the Pāḷi language or at least a principle figure as it relates to its creation.

²⁰ Commenting on von Hinüber's assessment of Pāḷi as an artificial language, Prof. Oberlies remarks: "The 'artificial language' of Mr. von Hinüber goes too far also for me" – "Die 'Kunstsprache' von Herrn von Hinüber geht auch mir zu weit" (personal communication, May 3, 2020).

still within Magadha, somewhat in the center of the east-Indian region, not far from Kaliṅga. He considers it feasible that Māgadhi – as depicted within the *aṭṭhakathā* tradition as the language of the *tipiṭaka* – is a variant of the Māgadhi dialect proper and that the Buddhist tradition can thus be correct. To similar conclusions came already Winternitz (1908/1981: 40), seeing the Māgadhi dialect proper at the base of Pāli, and Geiger (1916/1956: 4), to quote the latter:

A consensus of opinion regarding the home of the dialect on which Pāli is based has therefore not been achieved. Windisch therefore falls back on the old tradition—and I am also inclined to do the same—according to which Pāli should be regarded as a form of Māgadhi, the language in which Buddha himself had preached.

What emerges from the above is that the traditional narrative should not be and has not been dismissed outright.

Commentaries, Sub-Commentaries and Pāli Grammatical Literature

The *aṭṭhakathā* and *ṭikā* traditions take the language of Magadha (*māgadhabhāsā*) to be a natural language – a delightful language indeed (Sv-pt: 6).²¹ As presented already above, the *Samantapāsādikā vinaya aṭṭhakathā* (Sp IV: 23) proffers the following annotation of the phrase *sakāya niruttīyā* as used by two Brahmins in the context of one cardinal (as it relates to linguistics) incident recorded in the *vinaya*, where they, still attached to things Vedic, complain about the way or language by adopting or use of which the Buddha’s teaching was spoiled: “[...] ‘own tongue’ means the common speech belonging to Magadha (*māgadhiko vohāro*) in the manner spoken (*vuttappakāro*) by the Perfectly Enlightened One.”²² The 12/13th century CE *Vimativinodanīṭikā* (Vmv: 125) interprets the relevant portion of the episode thus: “They ruin (*dūṣenti*) the word of the Buddha with their own language (*sakāya niruttīyā*) as it relates to the canon (*pāli*): ‘Surely, those of inferior birth who have learned [memorized; i.e. the *buddhavacana*]

²¹ *Manoramam bhāsanti māgadhabhāsaṃ.*

²² “[...] *sakā nirutti nāma sammāsambuddhena vuttappakāro māgadhiko vohāro.*

corrupt the language of Magadha (*māgadhabhāsāya*) to be spoken by all with ease (*sabbesaṃ vattum sukaratāya*)’ – this is the meaning.”²³ The *Vinayālaṅkāraṭīkā* (Pālim-nt: 180) from the 1600’s CE in turn as succinctly as possible glosses *sakāya niruttīyā* as *māgadhabhāsā*, the “language of Magadha.”²⁴ The *Samantapāsādikā* (Sp I: 94), on another occasion, equates *māgadhabhāsā* seemingly with the Aryan language as a whole, thereby possibly referring to a supra-regional language.²⁵ The indigenous Pāli grammars basically concur with the above. The *Padarūpasiddhi*, for example, mentions explicitly that the Buddha spoke a tongue belonging to Magadha (*māgadhika*), as recorded in the *tipiṭaka*²⁶ (Rūp: 32) – for a detailed discussion concerning themes related to the last-mentioned point, see Gornall (2014). The above is, as we have already seen at the beginning of this chapter, a sensible account of what language the Buddha employed, at least *primarily*.

In this connection, it appears relevant to mention that the *aṭṭhakathā* tradition is not just an alternative scholarly opinion but rather constitutes strong additional evidence (cf. Karpik: 74), as Norman (1983: 119) spelled it out:

[...] some parts of the commentaries are very old, perhaps even going back to the time of the Buddha, because they afford parallels with texts which are regarded as canonical by other sects, and must therefore pre-date the schisms between the sects. As has already been noted, some canonical texts include commentarial passages, while the existence of the Old Commentary in the Vinaya-piṭaka and the canonical status of the Niddesa prove that some sort of exegesis was felt to be needed at a very early stage of Buddhism.

²³ Pāliyaṃ sakāya niruttīyā buddhavacanaṃ dūsentīti māgadhabhāsāya sabbesaṃ vattum sukaratāya hīnajaccāpi uggaṇhantā dūsentīti attho.

²⁴ **Sakāya niruttīyā**ti māgadhabhāsāya.

²⁵ [T]attha **ariyakam** nāma ariyavohāro, māgadhabhāsā.

²⁶ **Adhikāroyaṃ**. tattha pañca māre jītavāti jino, buddho. jinassa vacanaṃ jīnavacanaṃ, tassa jīnavacanassa yuttaṃ **jīnavacanayuttaṃ**, tepiṭakassa buddhavacanassa māgadhikāya sabhāvaniruttīyā yuttaṃ anurūpamevāti idaṃ adhikāratthaṃ veditabbaṃ.

Furthermore, Buddhaghosa's *Samantapāsādikā* contains over 200 quotations of earlier material, according to the indigenous tradition harkening back in parts to the first council (*paṭhamasaṅgīti*) held shortly after the demise of the Buddha (von Hinüber, 1996: 104). Surely, Geiger (1916/1956: 4–6) must have based his deliberations to some extent upon the exegeses of the *aṭṭhakathā*, *tīkā* and grammatical traditions showcased throughout this section when he wrote:

[...] Pāli should be regarded as a form of Māgadhi [...]. Such a *lingua franca* naturally contained elements of all the dialects [...]. I am unable to endorse the view, which has apparently gained much currency at present, that the Pāli canon is translated from some other dialect (according to Lüders, from old Ardha-Māgadhi). The peculiarities of its language may be fully explained on the hypothesis of (a) a gradual development and integration of various elements from different parts of India, (b) a long oral tradition extending over several centuries, and (c) the fact that the texts were written down in a different country. I consider it wiser not to hastily reject the tradition altogether but rather to understand it to mean that Pāli was indeed no pure Māgadhi, but was yet a form of the popular speech which was based on Māgadhi and which was used by Buddha himself.

Whatever the case may be when it comes to the nature of Pāli, perhaps Bodhi (2020: 3) is right when suggesting: “If by some unexpected miracle transcripts of the original discourses should turn up in the exact language(s) in which they were delivered, one who knows Pāli well would be able to read them with perhaps 90 percent accuracy.”²⁷ In thus manner, the scope of modern scholarly assessments concerning the nature of Pāli partially extends, but a brief survey of the sociological environment and conditioning of the Buddha will conclude the account on the nature of Pāli as a language with the following section.

²⁷ I am indebted to Ā. Bodhi (aka Bhikkhu Bodhi) for sharing the above text with me prior to the book release and Bryan Levman for directing my attention to this passage in the first place.

Pāḷi and the Buddha

The Pāḷi canon does not contain any record about which language the Buddha spoke, either as his native tongue, regarding potential standard dialects, a lingua franca or a koine. As a Sakyan, having possibly been nothing less than “junior allies”²⁸ of the Kosalan kingdom, he possibly spoke an eastern Indic dialect as his native tongue but having received a thoroughgoing education in an aristocratic or royal family, he in all likelihood was multilingual (cf. Edgerton, 1953: 2; Karpik, 2019: 21; Levman, personal communication, April 28, 2020; Rhys Davids, 1911:

²⁸ That this term might be a viable alternative rendering for the commonplace “vassals” to denote the relationship between the Sakyan crowned republic and the Kosalan kingdom might be gathered from Pj II (Bodhi [Trans.], 2017: 867): “[Ruled] by one native to the Kosalans (*kosalesu niketino*): Saying this, he rejects its rule by a subordinate ruler; for a subordinate ruler is not said to be native. But one for whom a particular country has been his place of residence by way of succession from early times is said to be native to it, and Suddhodana was such a king. By this, he shows, too, that it excels in wealth that has come down in succession.” DOP II (s.v. “*niketi(n)*”): “having a home; (one) who has a long connection with.” Although the *Dīghanikāya* speaks of the Sakyans as being *anuyuttā* to king Pasenadi of Kosala, this does not have to refer to vassalage. The past participle *anuyuttā*, functioning as a predicate substantive noun in the text, can mean: (a) “applying oneself to,” “given to,” (b) “following,” “attending on,” “obedient (as a vassal or inferior king),” with the textual variant for *anuyuttā* (i.e. *anantarā anuyantā*) designating the following: *anantarā* (“immediately after,” “next”); *anuyantā*, from *anuyāti* (“to follow,” “to go along through,” “then”).

This much suffices to understand that “vassal” is a rendering which misses out on a number of possible nuances. The respective glosses found in the *Sumaṅgalavilāsinī* and its *ṭīkā* make a rendering as “junior ally” even more compelling. The former explains *anuyuttā* with *vasavattino* (“wielding power,” “dominating”), but the latter clarifies this term – commenting on the textual variant – to mean *anuvattakā* (“siding in with,” “one who follows or acts according to”). Bryan Levman (personal communication, July 11, 2020) suggest that: “here *vasa* must have the meaning of OI *vaśa* ‘willing, submissive, obedient, subject to or dependent on’ (MW),” but finds that the traditional exegeses represents a “commentarial apology” and that it is “trying to make palatable something unpalatable.” It appears to me, however, that the matter, as pictured above, does not seem to justify probative statements.

153; Warder, 1970/2000: 200). There is also evidence that his clan – the Sakyas – spoke Munda (part of the Austroasiatic language family) and/or Dravidian (Levman, 2019: 64). Be that as it may, as Warder (p. 201) and others pointed out, the Buddha spent most of his time in the kingdom of Kosala and much less so in the Magadhan or others, and it is outside of Magadha where Buddhism at first in the main spread,²⁹ although it expanded significantly already during his lifetime and reached nearly all other ancient Indian countries before the Magadhan supremacy (ca. 410 BCE³⁰ and onwards; Warder: 202). Thus, although we cannot be certain what kind of language the Buddha habitually employed, it is at least safe to assume that he was multilingual. It is also well possible that he made regular use of a more universally established and widespread form of language – such as a pan-Indic high language, koine or lingua franca, the existence of which some scholars have argued for as we have come to see in the foregoing sections. This indeed might have been the Pāli language as preserved in the voluminous scriptures of Pāli Buddhism as we know them today, described by the tradition throughout under various names, such as *māgadhabhāsā*. Of that language the following grammar is a study.

²⁹ An analysis of the four main *nikāyas* of the Pāli canon yields the following: 78 % in Kosala and 12 % in Magadha when including larger cities (such as Sāvatti); 41 % in Kosala and 20 % in Magadha excluding such (Karpik, 2019: 22–5).

³⁰ Reckoned on the basis of the so-called corrected long chronology, which places the Buddha's demise at ca. 486 BCE. This dating remains a viable alternative to the median chronology, which has gained widespread appeal at present (placing this event at around 400 BCE) and even appears preferable, especially given the review and symposium of Narain (1993; 2003), including critical assessments of several highly influential deductions of scholarly works presented during the Göttingen symposia on the subject (Bechert, 1991; 1992; 1997).

The Pāli Alphabet or Orthography (*saññā*)

There are 41 phonemes to be found in the Pāli language, with the sequential order of them being as follows (Thitzana, 2016: 119): *a, ā, i, ī, u, ū, e, o, ka, kha, ga, gha, ña, ca, cha, ja, jha, ña, ṭa, ṭha, ḍa, ḍha, ṇa, ta, tha, da, dha, na, pa, pha, ba, bha, ma, ya, ra, la, va, sa, ha, ḷa, am (niggahītaṃ).*

(a) The vowel *a* is appended traditionally to the consonants for ease of utterance, but a representation without them is also acceptable, perhaps even preferable (Thitzana, 2016: 121). **(b)** By dint of affixing this inherent vowel, one may also correctly state that the Pāli language does not possess an alphabet – Gornall (2014: 511) called it a syllabary, but it rather represents a so-called abugida/syllabic alphabet (Ānandajoti, personal communication, July 15, 2020).

Pāli Alphabet Classification

(a) In the traditional classification system, we find, to facilitate reference, a division into five groups – called *vaggā* (pl.) in Pāli – of the majority of consonants, according to the position of the tongue in producing the respective sounds (Ñāṇadhaja, 2011: 9; Thitzana, 2016: 122). **(b)** Kaccāyana and other traditional grammars divide all letters into vowels and consonants, the latter of which includes the *niggahītaṃ* (Kacc 2–3, Vidyabhusana, S. & Punnananda, 1935: 3). **(c)** One distinct sound is assigned to each letter of the Pāli alphabet. **(d)** In Roman transliterations of Pāli letters, the aspirates (*cha, tha* etc.) are represented as digraphs – i.e. two letters standing for one sound (Warder, 1963/2001: 1). **(e)** Con-junct consonants (sing. *saṃyogo*) are combinations of consonants without intervening vowels, either with similar (e.g. *kkh, dda, ss*) or dissimilar consonants (e.g. *ndh, nd, mba*) respectively (Kacc 2–3, 6–7; Thitzana: 53; Vidyabhusana, S. & Punnananda: 3). **(f)** Within the traditional Pāli grammatical system, the technical term *saṃyogo* encompasses also geminate³¹

³¹ Gemination refers to the prolongation in the case of sonorant and fricative consonants (i.a. /l/, /m/, /n/ and /s/, /z/ respectively) or unreleased consonants in the case of stops (i.a. /t/, /p/, /d/, /g/; “Gemination,” n.d.; “Geminate consonants,” n.d.).

consonants (Rūp: 2–3). **(g)** The aspirated letters are not to be regarded as conjunct consonants since they only represent one separate phoneme or sound each (Ānandajoti, 2004: 16).

Vowels (*sarā*) – 8

- *a, ā, i, ī, u, ū, e, o.*

Consonants (*byañjanā*) – 33

- *ka*-group (*kavaggo*) – *ka, kha, ga, gha, ṇa.*
- *ca*-group (*cavaggo*) – *ca, cha, ja, jha, ña.*
- *ṭa*-group (*ṭavaggo*) – *ṭa, ṭha, ḍa, ḍha, ṇa.*
- *ta*-group (*tavaggo*) – *ta, tha, da, dha, na.*
- *pa*-group (*pavaggo*) – *pa, pha, ba, bha, ma.*
- Ungrouped (*avaggā*)³² – *ya, ra, la, va, sa, ha, ḷa.*
- *aṃ.*

(a) Only the first and second and the third and fourth letters of the same class (in that order; e.g. *ka* + *kha* but not *kha* + *ka*) can be conjoined to form a conjunct consonant (here geminates only). **(b)** The fifth letter (nasal) of each class can be appended to any consonant of the same classification – including itself – to form conjuncts. An exception is the letter *ṇ*, which cannot form a geminate consonant with itself (Yindee, 2018: 45). **(c)** The letters of the five groups are articulated with strong contact (cf. Rūp: 2; Ñāṇadhaja: 14).

Pāli Alphabet – General Descriptions

Vowels

(a) Short (*rassaṃ*) or light (*lahu*) are: *a, i, u* generally as well as *e* and *o* before geminate consonants (*kkh, cch, kk, yy* etc.; e.g. *bhāseyya* – “He should speak”). Exception for *e* and *o*: Occurrences before conjuncts with end-group nasals are long (e.g. *meṇḍo* – “sheep”; *soṇḍo* – “drunkard”; see above the last letters of each group for the end-group nasals). **(b)** According to

³² As per Ñāṇadhaja (2011: 8).

the so-called law of *mora*, long vowels are usually not followed by conjunct consonants (one exception out of many is: *svākkhāto* – “well taught”) – *mora* being a translation of the Pāli term *mattā* (“measure”). (c) One *mattā* denotes the time it takes to pronounce one short vowel; two *mattā* it takes for a long one as well as a short vowel before geminate and conjunct consonants (e.g. *nakkhamati* – “He does not approve of,” Sp V: 56; Kacc 602; Rūp: 2; Ñāṇadhaja, 2011: 6–8; Oberlies, 2001: 17). (d) In verse compositions, however, the short vowels take one and a half *mattā* to be vocalized: “In reference (*gahaṇa*) to light [form]: herein, however, it might be one and a half *mattā* as the employed (*gahaṇa*) use if it relates to verse”³³ (Rūp: 2). (e) Regarding the long vowels, the same length “of one and a half *mattā* is also a well-supported use”³⁴ (Rūp: 2). (f) “Short” is said because it takes only a short time to speak one *mattā*, corresponding to the time it takes to blink only once (Kacc 4; Rūp: 2; Ñāṇadhaja: 6–8).

(a) Long³⁵ (*dīgham*) or heavy (*garu*) are: *ā*, *ī*, *ū* generally as well as *e* and *o* at the end of words (e.g. *vane* – “in the forest”; *putto* – “son”), before single consonants (e.g. *kāmesu* – “regarding sensuality”; *odanaṃ* – “rice”) and, again, the nasal conjuncts mentioned just above (Sp V: 56; Ñāṇadhaja, 2011: 7). (b) “Long” is said since it takes a long time to articulate two *mattā*. (c) The time passage of these long vowels equals that of two short ones; i.e. to blink twice (Sp V: 6; Ñāṇadhaja: 7). (d) All vowels are voiced in the Pāli language (Duroiselle, 1906/1997: 4).

There are differences in opinion regarding the points just mentioned, even among the ancient grammarians. Kaccāyana, for example, mentions *e* and *o* as only being long (Kacc 5; Thitzana, 2016: 120), whereas Buddhappiya (Rūp: 12) in his medieval Pāli grammar *Padarūpasiddhi* – being part of the Kaccāyana tradition – maintains their shortness before geminate but not conjunct consonants (as above) without allowing exceptions.

³³ *Lahuggahaṇaṇcetta chandasi diyaḍḍhamattassāpi gahaṇatthaṃ*. The short vowel *a*, *i*, *u* are explained to be “light” (*lahu*).

³⁴ *Aññaggahaṇaṇ diyaḍḍhamattikānampi saṅgahaṇatthaṃ*. The long vowels are referred to as “others” (*añña*).

³⁵ The diacritic sign called a “macron” (ˉ) above a vowel indicates its length.

However, Moggallāna asserts, in contradistinction to the Kaccāyana tradition, that short vowels *e* and *o* count as separate letters and therefore reports a total of 43 phonemes to be existent in the Pāli language.³⁶ See Ñāṇadhaja (2011: 7) for an account of the again differing views held by modern grammarians. Here we mainly take the explanations of Kaccāyana, Buddhappiya and Ā. Ñāṇadhaja (aka Ledi Sayadaw) as the basis for our expositions on phonetics (cf. Gornall, 2014: 516–7).

With modern examples based upon American English pronunciation (whenever possible), the following lists tender illustrations of articulating letters in accordance with the parameters as found in the Pāli language. The letters in parentheses are International Phonetic Alphabet (IPA) symbols (“Pali,” n.d.), modelled after the explanations of the ancient grammarian as to the place (*ṭhānaṃ*), instrument (*karaṇaṃ*) and mode of articulation (*payatanaṃ*), given here to broaden the avenues for identification. The underlined parts of the example words used below correspond phonetically or approximate.

Consonants

(a) Consonants are said to indicate the meaning. **(b)** Standing by themselves, they take half a *mattā* to enunciate, with a short vowel one and a half *mattā* and with a long vowel two and a half (Rūp: 2; Ñāṇadhaja, 2011: 8, Oberlies, 2001: 17). **(c)** In Pāli, there are aspirated (e.g. *kha*) and unaspirated consonants (e.g. *ka*). **(d)** When letter *h* arises together with the letters of the groups (represented by an *h* in the digraphs, as in *kh*), or with *ya*, *ra*, *la*, *va*, it is said to be chest-born (*uraja*) – **(e)** it symbolizes aspiration (Geiger, 1916/1994: 2; Ñāṇadhaja: 12). Though most English speakers generally do not notice the difference, there are aspirated and unaspirated sounds in the English language too, and it might be helpful to briefly elaborate on that at this juncture. **(f)** The transcriptions of the

³⁶ “At the end of his discussion, Moggallāna rejects Buddhappiya’s standpoint by arguing that ‘e’ and ‘o’ cannot have a long duration and then, in certain situations, be short. If ‘e’ and ‘o’ are ever short these sounds must be acknowledged as completely different sounds from long ‘e’ and ‘o’” (Gornall, 2014: 519).

various English words are oftentimes “broad,” which means that they do not disclose as much detail as a so-called “narrow transcription” would. With the latter, it becomes possible to discern aspiration in the written word, as can be seen a little further below. **(g)** To give an illustration of what is meant by aspiration in English: When respectively speaking “skirt” and “keen” closely into the palm of one’s hand, an air puff becomes palpable when producing the [k^h] in “keen” (represented by the aspiration modifier letter “^h”) but not so with the [k] in “skirt” (showing that it is unaspirated). To clearly instance the pronunciation of the Pāli language, the relevant English examples are given according to a narrow transcription. **(h)** Note that only voiceless stops (*p*, *t*, *k*) occur as aspirated in English – and this just under certain conditions – not so voiced ones (*b*, *d*, *g*; Andersen, n.d.). **(i)** Double consonants are pronounced as two distinct syllables, with a noticeable pause (e.g. *panna* – “fallen,” “gone” ~ “unnecessary”; *phassa* – “contact” ~ “pus, sir”; Dhammajoti, 2018: 2; Warder, 1963/2001: 4).

Pāli Alphabet: Articulation

Gutturals (*kaṇṭhaja*)³⁷

(a) The letters of this group are *a*, *ā*, *ka*, *kha*, *ga*, *gha*, *ṇa*, *ha* and their articulation takes place in the region of the throat, being gutturals (Rūp: 1; Ñāṇadhaja, 2011: 11) – the end-group nasal is, in addition to the throat, also produced in the nose (*nāsikaṭṭhāṇaja*; Rūp: 2). **(b)** Unvoiced (*aghosa*)³⁸ letters of the gutturals are: *ka*, *kha*, with the voiced (*ghosa*)³⁹ ones being: *a*, *ā*, *ga*, *gha*, *ṇa*, *ha* (Kacc 9; Duroiselle, 1906/1997: 4; Vidyabhusana, S. & Punnananda, 1935: 5). **(c)** As already explained above, the letters of the five groups are articulated with strong contact (cf. Rūp: 2; Ñāṇadhaja: 14).

- *a* [ɐ] = nut.
- *ā* [a:] = calm.
- *ka* [k] = luck.

³⁷ Lit. “throat-born.”

³⁸ Unvoiced: without vibration of the vocal cords.

³⁹ Voiced: with vibration of the vocal cords.

- *kha* [k^h] ~ kel, with stronger breath pulse.
- *ga* [g] = gear.
- *gha* [g^h] ~ gear, with breath pulse as with *kha*.
- *ṇa* [ɳ] = thing.
- *ha* [h] = behind.

Palatals (tālūja)⁴⁰

(a) The letters of this group are *i*, *ī*, *ca*, *cha*, *ja*, *jha*, *ṇa*, *ya* and their articulation takes place on the palate with the tongue's middle (instead of its tip) in contact with it (Rūp: 1-2; Ñāṇadhaja, 2011: 11) – the end-group nasal is, in addition to the palate, also produced in the nose (*nāsikaṭṭhāṇaja*; Rūp: 2). (b) The letters *ca* and *cha* of the palatals are unvoiced but voiced are: *ja*, *jha*, *ṇa*, *ya* (Kacc 9; Vidyabhusana, S. & Punnananda, 1935: 5). (c) Letter *ya* is formed by somewhat touching, with slight contact (Rūp: 2; Ñāṇadhaja: 14).

- *i* [ɪ] = sit.
- *ī* [i:] = seek.
- *ca* [tʃ] = which.
- *cha* [tʃ^h] ~ check, with stronger breath pulse.
- *ja* [dʒ] = range.
- *jha* [dʒ^h] ~ range, with breath pulse as with *cha*.
- *ṇa* [ɳ] = señor.
- *ya* [j] = yes.

⁴⁰ Lit. “palate-born.”

Cerebrals/Retroflexes (muddhaja)⁴¹

(a) The letters of this group are *ṭa, ṭha, ḍa, ḍha, ṇa, ḷa, ra* and engendered with near the tip of the tongue, curled back at the roof of the mouth's interior (Rūp: 2; Ñāṇadhaja, 2011: 11) – the end-group nasal is, in addition to that, also produced in the nose (*nāsikaṭṭhāṇaja*; Rūp: 2). (b) Of these, *ṭa* and *ṭha* are unvoiced letters, whereas *ḍa, ḍha, ṇa, ḷa, ra* are all voiced (Kacc 9). (c) The letter *ra* is formed by somewhat touching, with slight contact (Rūp: 2; Ñāṇadhaja: 14). (d) The intervocalic letter *ḷa* usually represents *ḍa*, and *ḷh* may occur for *ḍh*, but only rarely. Of ten interchanged are *ḷ* and *l* (Collins, 2006: 2). (e) The way of pronouncing the letters of this class represents the typical Indian way of articulating the English alveolars, regular /t/, /d/ etc. (Warder, 1963/2001: 1). (f) However, when /r/ precedes /t/ and /d/ in American English, they manifest usually as retroflexes (see below for examples and, to further aid correct implementation, Figure 1 above).

Figure 1. Tongue position while pronouncing cerebral/retroflex sounds. Source: Retroflex consonant (n.d.). In: Wikipedia - The free encyclopedia.

- *ṭa* [t̪] = heart.
- *ṭha* [t̪ʰ] ~ barter, with stronger breath pulse.
- *ḍa* [d̪] = warder.
- *ḍha* [d̪ʰ] ~ warder, with breath pulse as with *ṭha*.
- *ṇa* [ɳ] = barn.
- *ḷa* [ɭ] = curl.
- *ra* [ɻ] = ram.

Dentals (dantaja)⁴²

(a) The letters of this group are *ta, tha, da, dha, na, la, sa* and sounded with the tip of the tongue in contact with the edge of the row or line of the

⁴¹ Lit. “head-born.”

⁴² Lit. “tooth-born.”

teeth (Rūp: 2; Ñāṇadhaja, 2011: 11) – the end-group nasal is, in addition to the teeth, also produced in the nose (*nāsikaṭṭhāṇaja*; Rūp: 2). **(b)** The unvoiced letters here are *ta*, *tha* and *sa*. Voiced forms are given as *da*, *dha*, *na*, *la* (Kacc 9). **(c)** Letter *la* is formed by somewhat touching, with slight contact (Rūp: 2; Ñāṇadhaja: 14). **(d)** The sibilant *sa* produces a hissing sound and is unvoiced (Kacc 9; Duroiselle, 1906/1997: 5). **(e)** Pāli has no [z] sound as found in English (e.g. “zone”; Warder, 1963/2001: 3). **(f)** An English equivalent of tongue positioning for these dentals would be in the formation of dental fricative /θ/ ([ð]; [θ] – e.g. “this”; “thin” respectively) but with a plosive sound instead of the natural fricative pronunciation (Warder: 2–3). **(g)** For illustration purposes, it is worth mentioning that consonants before the mentioned /θ/ tend to become dentals naturally (e.g. letter “d” in “rod thin”). **(h)** Thus, we can gather that this class of letters does not represent the regular alveolars as articulated with the tongue on the alveolar ridge – i.e. the noticeable ridge between just behind the upper teeth and the hard palate – as with /t/, /d/ etc. **(i)** In the following, the Pāli dentals with equivalents and approximations in English:

- *ta* [t̪] = hit this.
- *tha* [t̪ʰ] ~ attack, with stronger breath pulse and the tongue in dental position.
- *da* [d̪] = rod thin.
- *dha* [d̪ʰ] ~ den, with breath pulse as with *tha* and the tongue in dental position.
- *na* [n̪] = tenth.
- *la* [l̪] = wealth.
- *sa* [s̪] = salt.

Labials (oṭṭhaja)⁴³

(a) The letters of this group are *u*, *ū*, *pa*, *pha*, *ba*, *bha*, *ma* and spoken in contact with both lips (Ñāṇadhaja, 2011: 12) – the end-group nasal is, in addition to that, also produced in the nose (*nāsikaṭṭhāṇaja*; Rūp: 2);

⁴³ Lit. “lip-born.”

however, the lips should be open when articulating *u*, *ū* (Ñāṇadhaja: 14).

(b) The unvoiced and voiced letters form this class are *pa*, *pha* and *u*, *ū*, *ba*, *bha*, *ma* respectively (Kacc 9; Duroiselle, 1906/1997: 4; Vidyabhusana, S. & Punnananda, 1935: 5). **(c)** The lips should have strong contact when forming the labials, excepting the vowels (Ñāṇadhaja: 14).

- *u* [u] = put.
- *ū* [u:] = fruit.
- *pa* [p] = stop.
- *pha* [p^h] ~ prawn, with stronger breath pulse.
- *ba* [b] = hub.
- *bha* [b^h] ~ hub, with breath pulse as with *pha*.
- *ma* [m] = moon.

Gutturo-palatal (kaṇṭhatāluja)

(a) The letter is *e*, and its articulation happens in the throat (as with all other vowels) and the palate (Ñāṇadhaja, 2011: 12), with open lips (Rūp: 2). **(b)** It was stated already that all vowels are voiced in the Pāli language (Duroiselle, 1906/1997: 4).

- *e* [ɛ] = fell.
- *e* [e:] = Seele (German).⁴⁴

Gutturo-labial (kaṇṭhotṭhaja)

(a) The letter is *o* and is produced in the throat (as with all other vowels) and the lips, with an effort to keep the lips open (Rūp: 2; Ñāṇadhaja, 2011: 12, 14). **(b)** Again, all vowels need to be voiced in the Pāli language (Duroiselle, 1906/1997: 4).

- [o] = oko (Czech).⁴⁵
- [o:] ~ home (hoom; corresponding to [o] before the sound change to [ʊ]).

⁴⁴ I am not aware of any American English equivalent.

⁴⁵ See previous footnote.

Dento-labial (dantoṭṭhaja)

(a) The letter is *va* and is generated with the teeth and the lips (Ñāṇadhaja, 2011: 12), voicing occurs (Kacc 9; Vidyabhusana, S. & Punnananda, 1935: 5). (b) It is formed by *somewhat* (*tholaṃ*) touching, with slight contact (Rūp: 2; Ñāṇadhaja: 14). (c) Duroiselle (1906/1997: 6) and Warder (1963/2001: 3) mention that when this letter is preceded or combined with another consonant (e.g. as in *tvā*), it is instead pronounced as a pure labial.

- *va* [v] = vine.
- *va* [w] = wind.

The Pure Nasal (niggahītaṃ)

(a) This letter (*aṃ*)⁴⁶ is called *niggahītaṃ* or *anunāsiko* in Pāli⁴⁷ (Kacc 8) and is listed by all Pāli grammarians as a consonant (Kacc 6; Rūp: 3; Deokar, 2008: 113). (b) It is never of long duration when pronouncing it (Geiger, 1916/1956: 63) and is described as neither voiced nor unvoiced (Deokar, 2009: 179). (c) Traditionally, it is held that a dot (*bindu*) after a short vowel⁴⁸ or the dot itself represent the *niggahītaṃ* – with the *ṃ* being a transliteration of the dot, referring to some traditional orthographical representations of the phoneme (e.g. in the Sinhala script), equal to the *anusvāraḥ* and *anunāsikaḥ* in Sanskrit⁴⁹ (Mogg: 42; Rūp: 3; Deokar, 2008: 114, 116; cf. “Anusvāra,” n.d.). (d) In fact, manuscripts vary greatly in representing this letter; thus, we find, for example, variants for the word “other” as *aṃṇo*, *añño* or for the word “question” as *paṃha*, *pañha* and *paṇha* (Frankfurter, 1883: 7). (e) In the different modern American Standard

⁴⁶ The letter *a* is, again, just added for ease of pronunciation.

⁴⁷ In Pāli, there is no difference between the *anunāsiko* and the *niggahītaṃ*; both can be used interchangeably. This can be gathered from numerous passages where the *anunāsiko* stands for the *niggahītaṃ*. To quote the *Paramatthajotikā I* (p. 63) as an example, relating that the *anunāsiko*, there clearly representing the *niggahītaṃ*, was inserted for metrical reasons: *sabbattha sotthiṃ gacchantīti [...]* *anunāsiko cettha gāthābandhasukhatthaṃ vuttoti veditabbo*.

⁴⁸ If a long vowel falls before a *niggahītaṃ*, it is shortened (“Pali,” n.d.).

⁴⁹ It depends, however, which definition one refers to (cf. Deokar, 2009: 180).

Code for Information Interchange (ASCII) transliteration schemes, it is represented in a number of alternative ways – this, nevertheless, makes no difference whatsoever as to pronunciation. In the following, a selection of the more popular schemes:

- International Alphabet of Sanskrit Transliteration (IAST): ṁ.⁵⁰
- International Organization for Standardization (ISO; ISO 15919): m.⁵¹
- Indian Languages Transliteration (ITRANS): M; N; .m.
- Velthuis: .m.

(a) The *niggahītaṃ* is capable of forming homorganic nasals, i.e. the place of articulation when pronouncing the *niggahītaṃ* is assimilated to that of the end-group nasals in the Pāli alphabet, thereby being displaced by them, these and the *niggahītaṃ* thus becoming distinct phonetically (Kacc 31, 466, 537; Rūp: 28; cf. Deokar, 2008: 113; Levman, 2020: 29; Thitzana, 2016: 52). **(b)** These are the respective parameters for the assimilation of the *niggahītaṃ* to the end-group nasals:

- ṇ before a velar stop (*k, kh, g, gh*).
- ñ before a palatal stop (*ca, cha, ja, jha*).
- ṇ before a retroflex stop (*ṭa, ṭha, ḍa, ḍha*).
- n before a dental stop (*ta, tha, da, dha*).
- m before a labial stop (*pa, pha, ba, bha*).

(a) The place of articulation in the case of the *niggahītaṃ* is the nose (*nāsikaṭṭhāṇaja* – “born in the place of the nose” or *nāsikaja* – “nose-born”; Rūp: 2; Ñāṇadhaja, 2011: 12). **(b)** The place for the pronunciation of the end-group nasals is twofold: They are verbalized in the place of the nose (*nāsikaṭṭhāṇaja*), as is the *niggahītaṃ*, but in addition to that also in their “own place” of articulation (*sakaṭṭhāṇaja*), as elaborated above. **(c)** For example, the labial [m] is verbalized in the place of the nose (*nāsikaṭṭhāṇaja*) and with the lips (*oṭṭhaja* – “lip-born”; Rūp: 2; Ñāṇadhaja: 12). **(d)** This

⁵⁰ As in the Romanized editions of the *Chaṭṭhasaṅgāyana* (Sixth Buddhist Council) and also in those of the later Pali Text Society.

⁵¹ This rendition also corresponds to the Unicode character.

demonstrates that the end-group nasals and the *niggahītaṃ* are distinct from each other.

(a) The *Padarūpasiddhi* mentions that this phoneme is called *niggahītaṃ* because the instrument of articulation (*karaṇaṃ*) is restrained (*niggahīta*, past passive participle of *niggaṇhāti* – “press,” “repress”) by an obstructed opening (*mukhenāvivaṭena*) and because it is based upon (*nissāya*) the short vowels *a*, *i*, *u*, taking them up (*gayhati*, passive form of *gaṇhāti* – also “seize,” “acquire,” “grasp”; Rūp: 3; Deokar, 2008: 113; Warder, 1963/2001: 4). (b) In fact, the 17th century CE *Kaccāyana-vaṇṇanā* (as cited by Deokar, 2009: 178, 181, n. 6) explains that the nose is defined as the articulatory organ (*nāsikāsaṅkhātāṃ karaṇaṃ*) – and that this is what is restrained when pronouncing the *niggahītaṃ*. (c) This process of restraining, as per that text, also refers to the phrase “by an obstructed opening” (*mukhenāvivaṭena*). (d) This must refer to the partial occlusion instanced by the soft palate, restricting parts of the open airflow of an released (*vimutta*) or oral vowel and allowing parts to escape through the nose and the mouth respectively, since a full occlusion would produce end-group nasals, as discussed above (e.g. [m] when closing the lips or [ŋ] with occlusion of the oral cavity’s back by the tongue). (e) As a technical term, *vimutta* stands in direct opposition to the *niggahītaṃ* and denotes denasalization (Deokar, 2008: 118). (f) This must inform our understanding of the commentarial contrast of oral vowels with the *niggahītaṃ*: “**Released (*vimutta*)**: that which, not having nasalized, is spoken with an unobstructed opening, having let loose, [and] unrestrained (*aniggahetvā*) the articulatory organs [...] ‘*pattakallā*’ should be spoken having nasalized with obstructed opening, [but] ‘*pattakallā*’ is called an utterance freed (*vimuttavacanāṃ*) from the *niggahītaṃ* [i.e. ‘the restrained’], having not nasalized by an unobstructed opening”⁵² (Sp V: 56). On this contrast, see further also Deokar (pp. 112–3, 116–8).

⁵² *Vimuttanti yaṃ karaṇāni aniggahetvā vissajjetvā vivaṭena mukhena anunāsikaṃ akatvā vuccati. [...] pattakallān’ti avivaṭena mukhena anunāsikaṃ katvā vattabbe ‘pattakallā’ti vivaṭena mukhena anunāsikaṃ akatvā vacanaṃ niggahitassa vimuttavacanāṃ nāma.*

(a) Scholars who investigated the phonetic reality of the *niggahītaṃ* now also seem to regard it as a nasalization of the short vowels *a*, *i*, *u* (Collins, 2006: 1; Deokar, personal communication, July 3, 2020; Geiger, 1916/1956: 61; Levman, personal communication, July 8, 2020). (b) Therefore, the most likely pronunciation of the *niggahītaṃ* corresponds to nasalized vowels:

- *aṃ* [ã] = French (Québécois): “maman”
- *iṃ* [ĩ] = Portuguese: “sinto”
- *uṃ* [ũ] = Portuguese: “dum.”

(c) That this phenomenon of vowel nasalization is the correct interpretation is furthermore corroborated by the probability of it not having been a foreign element in the major autochthonous language groups present during the floruit of the Buddha. (d) These groups are the ancestral prototypes of modern languages in which this is a recognized feature (as in Dravidian Tamil or Santali). (e) In a similar way, this holds true for nasal assimilation (see above).

(a) What emerges from the above is that the pronunciation of the *niggahītaṃ* as it is commonly realized in the traditional Buddhist countries (in Sri Lanka and Thailand as [ŋ] and in Burma as [m]) does not reflect early usage. (b) However, to dismiss these articulations offhand would be too rash an approach, as can be gleaned from the instructions on what the proper methods for giving the Three Refuges (*tisaraṇaṃ*) within the bounds of the going forth as a *sāmaṇera* (*sāmaṇerapabbajjā*) and the ordination as a *bhikkhu* (*upsampadā*) imply: “But with the giving these ‘*buddhaṃ saraṇaṃ gacchāmi*’ as being joined as one (*ekasambandhāni*), they should be given having nasalized the end [of each word]; ‘*buddhaṃ saraṇaṃ gacchāmi*,’ having broken up [the words] (*vicchinditvā*), they should be given, having produced the letter *m*” (Sp III: 10). (c) Within the field of monastic legislation (*vinaya*), these two methods represent different but equally valid approaches to giving the Three Refuges during the mentioned procedures.⁵³ (d) However,

⁵³ From a linguistic standpoint, however, articulating an [m] at the end of a Middle Indic (MI, incl. Pāli) word does not constitute regular pronunciation. According to the operant rules of MI, it changes into the *niggahītaṃ*.

it is important to note that fastidious attention and adherence to proper pronunciation – apart from the just-provided instance of leeway – is an essential part of Theravāda legislative speech (*kammavācā*), insofar that an invalidation happens if “instead of an unaspirated sound [e.g. *ka*, *pa*, *ba*] an aspirated sound [*kha*, *pha*, *bha*], instead of an aspirate an unaspirate one, instead of an oral one (*vimutta*) a *niggahītaṃ*, instead of a *niggahītaṃ* an oral one is produced [...]”⁵⁴ (Sp V: 55–6). (e) So, the statement of Deokar (2009: 181) that “convention always supersedes grammar” might be a good principle to adopt for monastic activities such as chanting but less so for legislative speech.

⁵⁴ [...] *sithile kattabbe dhanitaṃ, dhanite kattabbe sithilaṃ, vimutte kattabbe nigga-hitaṃ, niggahite kattabbe vimuttanti imāni cattāri byañjanāni antokammavācāya kammaṃ dūsentī*. However, other confusions of letters such that of long *ā* for short *a* do not upset (*kuppati*) legislative speech. There is also a difference of opinion between the *suttanta* and *vinaya* elders in that the former group accepts a confusion of *da* for *ta*, *ta* for *da*, *ca* for *ja*, *ja* for *ca*, *ya* for *ka* and *ka* for *ya*, but for legislative speech this is not suitable, whence the latter group avoids these faults (Sp V: 55–6).

Sandhi

(a) Sandhi denotes the process of euphonic (or “pleasing,” “harmonious”) changes that may occur when two letters meet during the formation of words and compound words (Duroiselle, 1906/1997: 6; Thitzana, 2016: 35; Perniola, 1997: 7) and may be translated as “euphonic combination,” “union,” “junction” or “connection.” **(b)** The changes transpire by means of elisions, substitution, augmentation etc. (Yindee, 2018: 46). **(c)** When it occurs within a word, it is called *akkharasandhi* (“sandhi of letters,” aka “internal sandhi”) and *padasandhi* (“sandhi of words,” aka “external sandhi”) when two words meet, either to form compound words or to remain separate (Gair & Karunatillake, 1998: 9; Nhu Lien, 2007: 28) – examples for internal sandhi: *saṃ + yuttaṃ → saññuttaṃ*; and external sandhi: *tassa + iti → tassāti*. **(d)** There are four types of sandhi:

- Vowel sandhi (*sarasandhi*): meeting of two vowels, as final and initial member.
- Consonantal sandhi (*byañjanasandhi*): meeting of final vowel and initial consonant.
- *Niggahīta* sandhi: meeting of the *niggahītaṃ* (ṃ) as final member and vowel or consonant as following initial.
- Natural sandhi (*pakatisandhi*): retention of the structural pattern with no union taking place.

(a) The rules for the blending of two consonants also belong to the category of sandhi (Duroiselle, 1906/1997: 6) but will be dealt with here in the following chapter “Morphology.” **(b)** Let it be remarked that all the necessary morphological procedures to be elucidated in this chapter are on occasions applicable for the verbs of all roots (Kacc 517). **(c)** The references to Kaccāyana are as indicated after the rules, others are positioned next to the section headings. **(d)** Guide to the following section on sandhi:

- → = “becomes,” “changes into,” “results in.”
- → ∅ = elision.
- ∅ → = insertion.

- / = “in the environment of.”
- + = meeting.
- # = word boundary.
- [] = optionality (only after symbols).
- (Ṽ) = short vowel.
- (V̄) = long vowel.
- (C) = consonant.
- (CC) = double consonant.

(a) The underscores (__) indicate the position in the environment where the action happens that is expressed as a rule before the slash; for example, the formula: “vowel → (Ṽ) [usually] / __ vowel [same class]” says that any vowel (vowel) in the environment *before* another vowel (/ __ vowel) of the same class is usually lengthened (→ (Ṽ) [usually]). **(b)** If it should express that the lengthening would happen after (instead of before) another vowel, one would simply change the element “/ __ vowel” as above to “/ vowel __,” with the underscores in the posterior position. **(c)** If there is some additional rule after a comma, following the element which occurs after the slash, that indicates that it applies to this element when the change of the pre-slash rule has occurred or simultaneously (e.g. “vowel → Ø [occasionally] / __ vowel, vowel → (Ṽ)” means after the vowel has been elided – which happens occasionally – when coming before another vowel, that last-mentioned vowel is also lengthened (vowel → (Ṽ)). **(d)** To give two other general examples to facilitate comprehension:⁵⁵ “vowel → Ø [usually] / o __” signifies that a vowel is usually elided in the environment after the vowel o. Formula “v → b / # __” means that v changes into b after the beginning of a word – in the following, the respective rules in full.

Vowel Sandhi (*sarasandhi*) (Duroiselle, 1906/1997: 7–12)

1. Vowel → Ø / __ vowel (e.g. *yassa + indriyāni* → *yassindriyāni*; Kacc 12).

⁵⁵ For exemplification of explicit instances, see just below.

2. Vowel / __ dissimilar vowel, dissimilar vowel → Ø
(e.g. *cakkhu + indriyaṃ* → *cakkhundriyaṃ*; Kacc 13).
3. Vowel → Ø [occasionally] / __ vowel, vowel → (ṽ)
(e.g. *tatra + ayaṃ* → *tatrāyaṃ*; Kacc 15).
4. Vowel (ṽ) → (ṽ) [occasionally] / __ vowel, vowel → Ø
(e.g. *vi + atimānenti* → *vītimānenti*; Kacc 16).
5. *a* or *ā* → Ø [occasionally] / __ *i* or *ī*, *i* or *ī* → *e*
(e.g. *upa + ikkhati* → *upekkhati*; Kacc 14).
6. *a* or *ā* → Ø [occasionally] / __ *u* or *ū*, *u* or *ū* → *o*
(e.g. *canda + udayo* → *candodayo*; Kacc 14).

Exceptions:

- *a* → (ṽ) / __ *iti*, *i* → Ø (e.g. *tassa + iti* → *tassāti*).
 - *a* / __ *i*, *i* → Ø (e.g. *pana + ime* → *paname*).
 - *ā* → Ø / __ *i* (e.g. *seyyathā + idaṃ* → *seyyathidaṃ*).
7. Vowel (ṽ, ṽ) → (ṽ) [usually] / __ vowel [same class]
(e.g. *a + a* → *ā*; *i + ī* → *ī*; *ū + u* → *ū*).
 8. Vowels before particles beginning with *a*, *i*, *e*
(e.g. *atha*, *iva*, *eva*) follow the rules of sandhi thus:
 - *itthī + iti* → *itthīti*.
 - *e* / __ *e*, *e* → Ø (e.g. *sabbe + eva* → *sabbeva*).
 - *o* → Ø / __ *e* (e.g. *so + eva* → *sveva*).
 - *a* → Ø / __ *ettha* (e.g. *na + ettha* → *nettha*).
 9. *e* → Ø / __ dissimilar (ṽ) (e.g. *me + āsi* → *māsi*).
 10. *e* → Ø / __ dissimilar (ṽ) followed by (CC)
(e.g. *sace + assa* → *sacassa*).
 11. Vowel → Ø [usually] / *o* __ (e.g. *cattāro + ime* → *cattārome*).
 12. Vowel (ṽ) → (ṽ) [occasionally] / __ *eva*, *eva* → *ri*
(e.g. *yathā + eva* → *yathariva*; Kacc 22).
 13. *abhi* → *abbh* / __ dissimilar vowel (e.g. *abhi + uggacchati* → *abbha uggacchati* → *abbhugacchati*; Kacc 44, 46).

14. *ti* → *c* [occasionally], *c* → *cc* (e.g. *iti* + *etaṃ* → *iccetaṃ*; Kacc 19, 28, 47).
 15. *di* → *jj* / __ dissimilar vowel (e.g. *nadī* + *ā* → *najjā*).
 16. *adhi* → *ajjha* / __ dissimilar vowel (e.g. *adhi* + *okāse* → *ajjhokāse*; Kacc 45).

Transformation into Semi-Vowels (*ādeso*)⁵⁶

17. *i* → *y* / __ dissimilar vowel (e.g. *vi* + *ākāsi* → *vyākāsi*; Kacc 21).
 18. *e* [of *me*, *te*, *ke*, *ye* etc.] → *y* / __ *a* followed by (CC)
 (e.g. *ke* + *assa* → *kyassa*).
 19. *e* [of *me*, *te*, *ke*, *ye* etc.] → *y* / __ *a* followed by (C), *a* →
 (Ṽ) (e.g. *me* + *ahaṃ* → *myāhaṃ*; cf. Kacc 17).

Exceptions:

- *e* → Ø / __ vowel (Ṽ) (e.g. *me* + *āsi* → *māsi*).
- *e* → Ø / __ vowel (Ṽ) followed by (CC) (e.g. *sace* + *assa* → *sacassa*).
- *e* / __ vowel, vowel → Ø (e.g. *te* + *ime* → *teme*).
- *e* → Ø / __ *a* → (Ṽ) (e.g. *sace* + *ayaṃ* → *sacāyaṃ*).

20. *u* → *v* [occasionally] / __ dissimilar vowel
 (e.g. *anu* + *eti* → *anveti*; Kacc 18).
 21. *o* → *v* [occasionally] / __ dissimilar vowel
 (e.g. *yo* + *ayaṃ* → *yvāyaṃ*; Kacc 18).

Exceptions:

- *u* → Ø / __ dissimilar vowel (e.g. *sametu* + *āyasmā* → *ametāyasmā*).
- *u* → (Ṽ) / __ *i* (e.g. *sādhū* + *iti* → *sādhūti*).
- *o* → Ø [usually] / __ vowel (Ṽ) followed by (CC).
- *o* → Ø / __ vowel (Ṽ) followed by (CC)
 (e.g. *kuto* + *ettha* → *kutettha*).

⁵⁶ This term also refers to the transformation of one vowel into another (Thit-zana, 2016: 570).

Consonantal Insertion (*āgamo*)

22. To avoid a hiatus, not seldom the following letters are inserted between two vowels: *y, v, m, d, n, t, r, l (= ḷ), h* (e.g. *na + imassa → nayimassa*; *√bhū + ādāya → bhūvādāya*; *idha + āhu → idhamāhu* etc.; Kacc 35).
23. Vowel → Ø / __ consonant, Ø → *o* [occasionally] (e.g. *para + sahaṣṣaṃ → parosaṣṣaṃ*; Kacc 36).
24. Vowel / __ vowel or consonant, Ø → *ṃ* (e.g. *ava + siro → avamsiro*; Kacc 37).
25. *Putha*, Ø → *g* [occasionally] / __ vowel (e.g. *putha + eva → puthageva*; Kacc 42).
26. *ā* [of *pā*] → (ṽ), Ø → *g* [occasionally] / __ vowel (e.g. *pā + eva → pageva*; Kacc 43).

Consonantal Sandhi (*byañjanasandhi*)

(Duroiselle, 1906/1997: 15–6)

1. Vowel (ṽ) → (ṽ) [occasionally] / __ consonant (e.g. *yiṭṭhaṃ vā hutaṃ vā loke → yiṭṭhaṃ va hutaṃ va loke*; Kacc 26).
2. Vowel (ṽ) → (ṽ) / __ consonant (e.g. *√su + rakkaṃ → sūrakkaṃ*).
3. Vowel (ṽ) / __ consonant, (C) → (CC) (e.g. *idha + pamādo → idhappamādo*; usually after: *u, upa, pari, ati, pa, a, anu*, etc.).
4. Vowel (ṽ) → (ṽ) [occasionally] / __ consonant (e.g. *muni + care → munī care*; Kacc 25).
5. Vowel → Ø and is replaced by *a* [occasionally] / __ consonant (e.g. *eso dhammo → esa dhammo*; Kacc 27).
6. Vowel → *bb* / __ *v* (e.g. *ni + vānaṃ → nibbānaṃ*).
7. Vowel / __ consonant, consonant (C) → (CC) (e.g. *idha pamādo → idhappamādo*; Kacc 28).
8. Vowel (ṽ) [of particles] → (ṽ) [usually] / __ reduplicated consonant (e.g. *ā + kamati → akkamati*).

9. o [of so, eso, ayo, mano, tamo, paro, tapo and a few others] → a [occasionally] / __ consonant (e.g. *esa dhammo*; *sa attho*; *ayapattam*).
10. ava → o [occasionally] / __ consonant (e.g. *ava + naddha* → *onaddha*; Kacc 50).
11. dha → da [occasionally] / __ vowel (e.g. *ekaṃ + idha + ahaṃ* → *ekamidāhaṃ*; Kacc 20).
12. dha → ha [occasionally] (e.g. *rudhira* → *ruhira*; Kacc 20).
13. d → t (e.g. *sugado* → *sugato*; Kacc 20).
14. t → ṭ (e.g. *pahato* → *pahaṭo*; Kacc 20).
15. t → k (e.g. *niyato* → *niyako*; Kacc 20).
16. t → dh (e.g. *gantabba* → *gandhabbo*; Kacc 20).
17. tt → tr (e.g. *attajo* → *atrajo*; Kacc 20).
18. tt → cc (e.g. *batto* → *bacco*; Kacc 20).
19. g → k (e.g. *hatthupaga* → *hatthupaka*; Kacc 20).
20. r → l (e.g. *paripanno* → *palipanno*; Kacc 20).
21. y → j (*gavayo* → *gavajo*).
22. y → k (e.g. *saye* → *sake*; Kacc 20).
23. vv → bb (e.g. *kuvvato* → *kubbato*; Kacc 20).
24. k → y (*sake pure* → *saye pure*).
25. j → y (*nijaṃputtam* → *niyaṃputtam*; Kacc 20).
26. k → kh (*nikamati* → *nikhamati*; Kacc 20).
27. p → ph (e.g. *nipatti* → *niphatti*; Kacc 20).
28. pati → paṭi [occasionally] / __ vowel (Kacc 48).
29. putha [inter alia] → puthu / __ consonant (Kacc 49).

Niggahīta Sandhi (Duroiselle, 1906/1997: 14–5)

1. ṃ / __ consonant (e.g. *taṃ dhammaṃ kataṃ*).
2. ṃ → respective nasal: ṇ, ñ, ṇ, n, m [occasionally] / __ consonant (e.g. *raṇaṃ + jaho* → *ranañjaho*; *taṇhaṃ + karo* → *taṇhaṅkaro*; *saṃ + ṭhito* → *saṇṭhito*; Kacc 31).
3. ṃ → l / __ l (e.g. *paṭi + saṃ + līno* → *paṭisallīno*; *saṃ + lekko* → *sallekko*).

4. $\text{ṁ} \rightarrow \tilde{n}$ [occasionally] / $__ e$ [or h] (e.g. *taṁ + eva* \rightarrow *taññeva*; *evaṁ + hi* \rightarrow *evañhi*; Kacc 32; for doubling of the consonant, see under “Consonantal Sandhi (*byañjanasandhi*),” pt. 7.; Kacc 28).
5. $\text{ṁ} \rightarrow \tilde{n}$ [occasionally] / $__ y$ (e.g. *saṁ + yuttaṁ* \rightarrow *saññuttaṁ*; Kacc 33; for doubling of the consonant, see under “Consonantal Sandhi (*byañjanasandhi*),” pt. 7.; Kacc 28).
6. $\text{ṁ} \rightarrow d$ [occasionally] / $__ \text{vowel}$
(e.g. *etaṁ + attho* \rightarrow *etadattho*; Kacc 34).
7. $\text{ṁ} \rightarrow m$ [occasionally] / $__ \text{vowel}$
(e.g. *taṁ ahaṁ* \rightarrow *tamaḥaṁ*; Kacc 34).
8. $\text{ṁ} \rightarrow \emptyset$ [occasionally] / $__ \text{consonant}$ (e.g. *ariyasaccānaṁ + dassanaṁ* \rightarrow *ariyasaccānadassanaṁ*; Kacc 39).
9. $\text{ṁ} \rightarrow \emptyset$ [occasionally] / $__ \text{vowel}$
(e.g. *tāsaṁ + ahaṁ santike* \rightarrow *tāsāhaṁ santike*; Kacc 38).
10. $\text{Vowel} \rightarrow \emptyset$ [occasionally] / $\text{ṁ} __$ (e.g. *kiṁ + iti* \rightarrow *kinti*; Kacc 40).
11. $\text{Vowel} \rightarrow \emptyset$, $\text{consonant (CC)} \rightarrow \text{consonant (C)}$ / $\text{ṁ} __$
(e.g. *evaṁ assa* \rightarrow *evaṁsa*; Kacc 41).
12. $\emptyset \rightarrow \text{ṁ}$ / $__ \text{vowel}$ [or consonant]
(e.g. *ava siro* \rightarrow *avaṁsiro*; Kacc 37).

Natural Sandhi (*pakatisandhi*)

1. $\text{Vowel} / __ \text{consonant}$ (e.g. *mano + pubbaṅgamā* \rightarrow *manopubbaṅgamā*; Kacc 23).
2. $\text{Vowel} / __ \text{vowel}$ (e.g. *ko imaṁ*; Kacc 24).
3. i [and u] / $__ \text{any verb w/ vowel initial}$ (e.g. *gāthāhi ajjhabhāsi*).
4. i [and u] / $__ \text{any verb}$.
5. $\text{Vowel} / __ \text{vocative case}$ (e.g. *kassapa etaṁ*).
6. Final long vowel remains unchanged if not followed by *iti* or not being compounded.
7. $\text{Vowel} / __ \text{particle w/ initials other than } a, i, e$
(e.g. *atha kho āyasmā*).

Morphology

(a) The following morphological changes happen mostly in the formation of the passive, past passive participle, the stems built from the third class root affixes, of the infinitive, absolutive, the future passive participle and in the formation of the desiderative – also under the influence of certain affixes in the derivation of nouns.⁵⁷ (b) Regressive assimilation (←) is the more common. (c) The *ṇ* placed traditionally before all causative affixes to denote vowel increase (*vuddhi*) in the root (see below the chapter “Vowel Gradation”) is always to be elided (e.g. *√kara + ṇaya + ti* → *kārayati*; Kacc 523). (d) References to Kaccāyana are again as indicated – others are placed next to the section headings. (e) The paradigms are as follows (Duroiselle, 1906/1997: 17–8):

1. Mute⁵⁸ → mute / mute __ (e.g. *√saja + ta* → *satta*).
2. Dental → guttural / guttural __ (e.g. *√laga + na* → *lagna* → *lagga*).
3. Dental voiceless → retroflex / palatals __ (e.g. *√maja + ta* → *maṭṭha* or *maṭṭa*); *j* and *c* → *t* [occasionally] / __ *t*
(e.g. *√bhuja + ta* → *bhutta*; *√muca + ta* → *mutta*).
4. Dental voiceless → retroflex / retroflex __
(e.g. *√kuṭṭa + ta* → *kuṭṭha*).
5. Dental → consonant / __ consonant
(e.g. *√uda + gaṇhāti* → *uggaṇhāti*).
6. Voiced aspirate → voiced unaspirate / __ *t*, *t* → *dh*
(e.g. *√rudhi + ta* → *rud + dha* → *ruddha*).
7. Voiceless unaspirated guttural or labial → voiceless dental / __
voiceless dental (e.g. *√tapa + ta* → *tatta*).

⁵⁷ See chapters “*Kita* and *Taddhita* Affixes” and “*Uṇādi* Affixes.”

⁵⁸ Mute because they require closure or contact (*phasso*) in their place of articulation and the stopping of the breath. Not to be confused with surd; i.e. unvoiced consonants. They are: *k, kh, g, gh, c, ch, j, jh, ṭ, ṭh, ḍ, ḍh, t, th, d, dh, p, ph, b, bb*. As with the letters in the alphabet, the *a* appended to the Pāli roots provided is just for ease of utterance.

8. Voiced or voiceless unaspirated dental → labial / __ labial (e.g. *tad + purisa → tappurisa*).
9. *n* → Ø [occasionally *m̐*] / __ *ta* (of past passive participle; e.g. *√mana + ta → mata*).

Assimilation of *y*⁵⁹ (Duroiselle, 1906/1997: 19–20)

10. Consonant ← *y* (e.g. *√divu + ya → divva → dibba*), also in the middle of a compound word (e.g. *api + ekacce → apyekacce → appekacce*).
11. *vv* → *bb* (e.g. *√divu + ya → divva → dibba*).
12. *ā* [of *√dā, √pā, √hā, √mā* and *√ñā*] → *eyya* [occasionally] / __ *ya* (e.g. *√dā + ya → deyyam̐* – “something to give”; Kacc 544).
13. Ø → *ya* [occasionally] / *da-* and *dha-*ending roots __ *tuna, tvāna* and *tvā* [suffixes] (e.g. *u + pada + ya + tvā → uppajjitvā*; Kacc 606).
14. *ty* → *cc* (e.g. *√sata + ya → satya → sacca*).
15. *dy* → *jj* (only after *√mada* and *√vada*; e.g. *√mada + ya → madya → majja*; Kacc 544).
16. *dhy* → *jjh* (e.g. *√rudha + ya → rudhya → rujjha*).
17. *thy* → *cch* (e.g. *tath + ya → tathya → taccha*).
18. *my* → *mma* (Kacc 544).
19. *jy* → *gga* (e.g. *√yuja + ya → yogga*; Kacc 544).
20. *y* → sibilant / sibilant __ (e.g. *√pasa + ya → pasya → passa*).
21. *v* → *b* / # __ (e.g. *vi + ākaraṇam̐ → vyākaraṇam̐ → byākaraṇam̐*).
22. Dental → *y* / __ *y* (e.g. *√ud + yuñjati → uyyuñjati*).
23. *u* → (*ṽ*) [of *√guha* and *√dusa*] / __ causative affixes (e.g. *√guha + aya + ti → gūhayati* – “causes to protect,” “hide”; Kacc 486).
24. *ya* → *abba* / *√bhū* __ (e.g. *√bhū + ya → bhabbo*; Kacc 543).
25. *a* and *v* [of *√vaca, √vasa, √vaha*] → *u* [occasionally] / __ *ya* (e.g. *√vaca + ya + ti → vuccati*; Kacc 487).

⁵⁹ Assimilation of this type happens mostly in the formation of the passive voice, absolutes, verbal bases/stems of the third class and derived nouns.

26. Initial vowels [of $\sqrt{dā}$, $\sqrt{dhā}$, $\sqrt{mā}$, $\sqrt{thā}$, $\sqrt{hā}$, $\sqrt{pā}$, \sqrt{maha} , \sqrt{matha}] $\rightarrow i / _ ya$ (e.g. $dā + ya + ti \rightarrow dīyati$; Kacc 502).
27. Consonant y [of \sqrt{yaja}] $\rightarrow i / _ ya$ (e.g. $\sqrt{yaja} + ya + ti \rightarrow ijate$ – “He is worshipped”; Kacc 503).

Assimilation of r (Duroiselle, 1906/1997: 21)

28. $r \rightarrow \emptyset / _ \text{mute}$ (e.g. $\sqrt{kara} + ta \rightarrow kata$).
29. $r \rightarrow \emptyset, a \rightarrow (\bar{V}) / _ \text{mute}$ (incl. lengthening of preceding a ; e.g. $\sqrt{kara} + tabba \rightarrow kātābba$).
30. $n \rightarrow \eta / r _ , r \rightarrow \eta$ (e.g. $\sqrt{cara} + na \rightarrow carṇa \rightarrow ciṇṇa$).
31. $r \rightarrow l / _ l$ (e.g. $\sqrt{dur} + labho + si [o] \rightarrow dullabho$).
32. When any r -morpheme is appended to a root, the first component vowel of that root and its last consonant are usually elided as well the vowel and the r of the r -morpheme (Kacc 539).

Assimilation of s (Duroiselle, 1906/1997: 21–2)

33. $j + sa \rightarrow kkh / _ sa$ (e.g. $\sqrt{bubhuj} + sa \rightarrow bubhukkha$).
34. $p + sa \rightarrow cch / _ sa$ (e.g. $\sqrt{jigup} + sa \rightarrow jiguccha$).
35. $t + sa \rightarrow cch / _ sa$ (e.g. $\sqrt{tikit} + sa \rightarrow tikiccha$).
36. $s + sa \rightarrow cch / _ sa$ (e.g. $\sqrt{jighas} + sa \rightarrow jighaccha$).
37. $y \rightarrow s$ [occasionally] / $sa _$ (e.g. $\sqrt{vnasa} + ya \rightarrow nassa$; $\sqrt{alasa} + ya + si [am] \rightarrow ālasyam$).
38. $t \rightarrow \text{ṭ} / s _$ (e.g. $\sqrt{vkasa} + ta \rightarrow kaṭṭha$).
39. Dental $\rightarrow s / _ s$ (e.g. $\sqrt{vuda} + sāha \rightarrow ussāha$).
40. $s \rightarrow t / _ t$ (e.g. $\sqrt{vjhasa} + ta \rightarrow jhatta$).
41. $s \rightarrow tth / _ t$ (e.g. $\sqrt{vvasa} + ta \rightarrow vuttha$).

Assimilation of h (Duroiselle, 1906/1997: 22–3)

42. Consonant \rightarrow aspirated consonant / $_ h$ (e.g. $\sqrt{vuda} + harati \rightarrow uddharati$).
43. $h\eta \rightarrow \eta h / _ \eta$ (e.g. $\sqrt{vgaha} + ṇa \rightarrow gaṇṇa \rightarrow gaṇḥa$).⁶⁰

⁶⁰ Kacc 490 explains it like this: h [of \sqrt{vgaha}] $\rightarrow \emptyset$ when $\emptyset \rightarrow \eta hā$ (e.g. $\sqrt{gaṇhāti}$).

44. $h \leftrightarrow y$ and in some instances $ya \rightarrow la$
(e.g. *oruh* + *ya* → *oruyha*; Kacc 488).
45. $h \leftrightarrow v$ (e.g. *jihvā* → *jivhā*).
46. $h \rightarrow y$ [seldom] / $_y$ (e.g. *leh* + *ya* → *leyya*).
47. $h \rightarrow gh$ [occasionally] / $\# _$ (e.g. *hammati* → *ghammati*).
48. $h + t \rightarrow ddh$ (e.g. *√duha* + *ta* → *duddha*).
49. $h + t \rightarrow dh$ (sometimes; e.g. *√liha* + *tum* → *ledhum*).

Reduplication⁶¹ (Duroiselle, 1906/1997: 83)

1. The second and fourth consonants of the consonant groups (sing. *vaggo*) are added to the first and third respectively
(e.g. *yatra thitaṃ* → *yatraṭṭhitaṃ*; Kacc 29).⁶²
2. Initial vowel [of roots] → (\bar{v}) (e.g. *√ah* → *āha*).
3. The reduplicated vowels → *i*, \bar{i} and *a* [occasionally]
(e.g. *jigucchati*; Kacc 465).
4. A guttural is reduplicated by its corresponding palatal
(e.g. *√kita* + *cha* + *ti* → *cikicchati*; Kacc 462).
5. An unaspirate is always reduplicated by an unaspirate
(e.g. *√chida* → *ciccheda* – “It was cut”; Kacc 458, 462).
6. An aspirate is reduplicated by its unaspirate
(e.g. *√bhuja* → *bubhukkhati*; Kacc 458, 461).
7. The initial *h* of a root is reduplicated by *j*
(e.g. *√hā* → *jahāti*; Kacc 464).
8. *v* is reduplicated by *u* [usually] (e.g. *√vasa* → *uvāsa*).
9. *a* or \bar{a} takes *a* (e.g. *√dhā* → *dadhā*; Kacc 460).
10. *i* or \bar{i} takes *i* [occasionally] (e.g. *√kita* → *cikicchā*; Kacc 460).
11. *u* or \bar{u} takes *u* but occasionally *a* (e.g. *√bhū* → *babhuva*).
12. *i* → *e* [occasionally] (e.g. *√chida* → *ciccheda*).
13. *u* → *o* [occasionally] (e.g. *√soca* → *susoca*).

⁶¹ Mainly doubling of the first root consonant together with a following vowel in the formation of the active base/stem of the third class of conjugation.

⁶² Exceptions: *idha*, *cetaso*, *dalhaṃ*, *gaṇhāti*, *thāmasā*.

14. *a* [of a root] → (Ṽ) (e.g. √*vada* → *uvāda*).
15. *m* [of √*māna*] → *v* [occasionally] / __ reduplicated vowel (e.g. *vīmaṃsati*; Kacc 463).
16. √*māna* → *maṃ* [occasionally] / reduplicated vowel __ *sa* (e.g. *vīmaṃsati*; Kacc 467).
17. √*pā* → *vā* [occasionally] / reduplicated vowel __ *sa* (e.g. *pivāsati*; Kacc 467).
18. Reduplicated *k* [of √*kita*] → *t* / __ reduplicated vowel (e.g. *tikicchati*; Kacc 463).
19. Ø → *ṃ* [occasionally] / reduplicated vowel __ (e.g. *caṅkamati*; Kacc 466).

Further Morphological Changes

1. √*pā* → *pivā* [occasionally] (e.g. √*pā* + *ā* + *ti* → *pivati*; Kacc 469).
2. √*ñā* → *jā*, *jaṃ*, *nā* [occasionally] (e.g. √*ñā* + *a* + *ti* → *jānāti*; Kacc 470).
3. √*disa* → *passa*, *dissa*, *dakkha* [occasionally] (e.g. √*disa* + *a* + *ti* → *passati*; Kacc 471).
4. √*hara* → *gī* / __ *sa* (e.g. *jigīsati*; Kacc 474).
5. √*brū* and √*bhū* change into *āha* and *bhūva* respectively / __ perfect endings (e.g. √*brū* + *a* → *āha*; Kacc 475).
6. *m* [of √*gamu*] → *cch* [occasionally] / __ all conjugational root affixes (e.g. √*gamu* + *a* + *māna* + *si* [o] → *gacchamāno*; Kacc 476).
7. Initial vowel [of √*vaca*] → *o* / __ aorist suffix (e.g. √*vaca* + *uṃ* → *avocuṃ*; Kacc 477).
8. *ū* [of √*hū*] → *eha*, *oha*, *e* [occasionally] / __ future tense suffix, future tense suffix may → Ø (e.g. √*hū* + *ssati* → *hehiti*; Kacc 480).
9. √*kara* may → *kāha* [occasionally] / __ future tense suffix, future suffix → Ø (Kacc 481).
10. *ā* [of √*dā*] → *aṃ* / __ present tense suffixes *mi* and *ma* (e.g. √*dā* + *mi* → *dammi*; Kacc 482; *ṃ* → *m* by Kacc 31).

11. Non-conjunct root vowels → increase⁶³ [usually] / __ non-causative affixes (e.g. $\sqrt{h}\bar{u} + a + ti \rightarrow hoti$; Kacc 485).
12. $\emptyset \rightarrow kha, cha, sa$ [occasionally] / $\sqrt{t}ija, \sqrt{g}upa, \sqrt{k}ita$ and $\sqrt{m}\bar{a}na$ __ (e.g. $\sqrt{t}ija + kha + ti \rightarrow titikkhati$ – “He forbears [or ‘endures’]”; Kacc 433).
13. $\sqrt{g}aha \rightarrow ghe$ / __ affix ppa (e.g. $gheppati$; Kacc 489).
14. $\sqrt{k}ara \rightarrow k\bar{a}sa$ [occasionally] / __ aorist suffix (e.g. $\sqrt{k}ara + \bar{i} \rightarrow ak\bar{a}si$; Kacc 491).
15. Suffix $mi \rightarrow mhi$ [occasionally] / $\sqrt{v}asa$ __ (e.g. $\sqrt{v}asa + mi \rightarrow amhi$ – “I am”; Kacc 492).
16. Suffix $ma \rightarrow mha$ [occasionally] / $\sqrt{v}asa$ __ (e.g. $\sqrt{v}asa + ma \rightarrow amha$ – “We are”; Kacc 492).
17. Suffix $tha \rightarrow ttha$ [occasionally] / $\sqrt{v}asa$ __, s [of $\sqrt{v}asa$] → \emptyset (e.g. $\sqrt{v}asa + tha \rightarrow attha$ – “You are”; Kacc 493).
18. Suffix $ti \rightarrow tthi$ [occasionally] / $\sqrt{v}asa$ __ (e.g. $\sqrt{v}asa + ti \rightarrow atthi$ – “[there] is”; Kacc 494).
19. Suffix $ti \rightarrow ssa$ / $\sqrt{v}asa$ __ (e.g. $\sqrt{v}asa + ti \rightarrow assa$ – “It should be”; Kacc 571).
20. $\emptyset \rightarrow i$ / $\sqrt{v}br\bar{u}$ __ ti (e.g. $\sqrt{v}br\bar{u} + a + ti \rightarrow brav\bar{i}ti$ – “He says”; Kacc 520).
21. Suffix $tu \rightarrow tthu$ [occasionally] / $\sqrt{v}asa$ __ (e.g. $\sqrt{v}asa + tu \rightarrow atthu$ – “Let it be”; Kacc 495).
22. s of [of $\sqrt{v}asa$] → \emptyset when nominative suffix si ⁶⁴ is appended to $\sqrt{v}asa$ (e.g. $\sqrt{v}asa + si \rightarrow asi$ – “You are”; Kacc 496).
23. Aorist suffixes $\bar{i} \rightarrow ttha$ / $\sqrt{v}labha$ __ (e.g. $\sqrt{v}labha + \bar{i} \rightarrow alattha$; Kacc 497).
24. $i\bar{m} \rightarrow ttham$ / $\sqrt{v}labha$ __ (e.g. $\sqrt{v}labha + i\bar{m} \rightarrow alattham$; Kacc 497).
25. Aorist suffix $\bar{i} \rightarrow cchi$ / $\sqrt{k}usa$ __, s [of $\sqrt{k}usa$] → \emptyset (e.g. $\sqrt{k}usa + \bar{i} \rightarrow akkocchi$ – “He reviled”; Kacc 498).
26. $\sqrt{v}d\bar{a} \rightarrow dajja$ [occasionally] (e.g. $\sqrt{v}d\bar{a} + eyya \rightarrow dajjeyya$; Kacc 499).

⁶³ See below the chapter “Vowel Gradation” for details.

⁶⁴ This nominative suffix undergoes changes to $o, a\bar{m}$ etc. in other cases.

27. $\sqrt{vada} \rightarrow vajja$ [occasionally]
(e.g. $\sqrt{vada} + eyya \rightarrow vajjeyya$; Kacc 500).
28. $\sqrt{gamu} \rightarrow ghamma$ [occasionally]
(e.g. $\sqrt{gamu} + a + tu \rightarrow ghammatu$ – “Let him go”; Kacc 501).
29. Aorist suffix $um \rightarrow imsu$ / all roots __ (Kacc 504).
30. $\sqrt{jara} \rightarrow jira$ or $jyia$ [occasionally]
(e.g. $\sqrt{jara} + a + ti \rightarrow jirati$; Kacc 505).
31. $\sqrt{mara} \rightarrow miya$ [occasionally]
(e.g. $\sqrt{mara} + a + ti \rightarrow miyyati$; Kacc 505).
32. Initial vowel a [of \sqrt{asa}] $\rightarrow \emptyset$ [occasionally] / __ all suffixes
(e.g. $\sqrt{asa} + a + anti \rightarrow santi$; Kacc 506).
33. $\sqrt{asa} \rightarrow bhū$ [occasionally]
(e.g. $\sqrt{asa} + a + ssanti \rightarrow bhavissanti$; Kacc 507).
34. Optative suffix $eyya \rightarrow iyā$ or $ñā$ / $\sqrt{ñā}$ __ (Kacc 508).
35. Affix $nā$ (fifth class active base root affix) $\rightarrow \emptyset$ or ya [occasionally]
/ $\sqrt{ñā}$ __ (Kacc 509).
36. Affix a (first class active base root affix) $\rightarrow \emptyset$ or e [occasionally]
(e.g. $\sqrt{vasa} + a + mi \rightarrow vademi$; Kacc 510).
37. Affix o (seventh class active base root affix) $\rightarrow u$ [occasionally] /
 \sqrt{kara} __ (e.g. $\sqrt{kara} + o + te \rightarrow karume$ – “He does”; Kacc 511).
38. Component vowel a [of \sqrt{kara}] $\rightarrow u$ [occasionally] (e.g. $\sqrt{kara} + o + ti$
 $\rightarrow kurute$ – “He does”; Kacc 511, 512).
39. The increase morpheme $o \rightarrow ava$ / $\sqrt{bhū}$, \sqrt{cu} etc. __ vowel
(e.g. $\sqrt{cu} + a + ti \rightarrow cavati$; Kacc 513).⁶⁵
40. The increase morpheme $e \rightarrow aya$ / \sqrt{ni} , \sqrt{ji} etc. __ vowel
(e.g. $\sqrt{ji} + a + ti \rightarrow jayati$; Kacc 514).
41. Increase vowel $o \rightarrow āva$, $e \rightarrow āya$ / __ causative affix [e , ya]
(e.g. $\sqrt{lū} + e + ti \rightarrow lāveti$; Kacc 515).
42. $\emptyset \rightarrow i$ / root consonant __ $asabbadhātuka$ suffixes⁶⁶
(e.g. $\sqrt{gamu} + ssati \rightarrow gamissati$; Kacc 516).

⁶⁵ See also below the chapter “Vowel Gradation” for details.

⁶⁶ Suffixes of the perfect (*parokkhā*), aorist (*ajjatani*), future indicative (*bhavisanti*) and conditional (*kālātipatti*) are meant (Kusalagñāṇa, 2012: 161).

43. Last component vowel [of polysyllabic roots] → Ø [occasionally]
(e.g. $\sqrt{\text{mara}} + a + ti \rightarrow \text{marati}$; Kacc 521).
44. Consonants *s* and *m* [of $\sqrt{\text{visu}}$, $\sqrt{\text{yamu}}$] → *cch* [occasionally]
(e.g. $\sqrt{\text{visu}} + a + ti \rightarrow \text{icchati}$; Kacc 522).
45. *ima* → *a*, *samāna* → *sa* / *ima*, *samāna*, *apara* __ suffixes
jja, *jju*, *jja*, *jju* (e.g. *ima* + *jja* → *ajja* – “today”).
46. *Kita* affix *ta* → *cca* or *ṭṭa* / $\sqrt{\text{naṭa}}$ __ (e.g. $\sqrt{\text{naṭa}} + ta$
+ *si* [*aṃ*] → *naccaṃ* – “dancing”; Kacc 571).
47. Regarding *kita* affix *ta*:
 - i. $\sqrt{\text{sāsa}}$, $\sqrt{\text{disa}} \rightarrow \text{riṭṭha}$ / __ *ta* (e.g. $\sqrt{\text{disa}} + ta \rightarrow \text{diṭṭha}$ – “seen”; Kacc 572).
 - ii. *ta* → *ṭṭha* [together with final root consonant] / $\sqrt{\text{puccha}}$, $\sqrt{\text{bhanja}}$, $\sqrt{\text{hansa}}$ and roots ending in *s* etc. __ (e.g. $\sqrt{\text{bhanja}} + ta \rightarrow \text{bhaṭṭha}$; Kacc 573).
 - iii. *ta* → *uṭṭha* [together with final *s* of the root] / $\sqrt{\text{vasa}}$ __,
v → *u* [occasionally] (e.g. $\sqrt{\text{vasa}} + ta \rightarrow \text{vuṭṭha}$; Kacc 574–575).
 - iv. *ta* → *dha* and *ḍha* respectively / *dha*, *ḍha*, *bha*, *ha* __
(e.g. $\sqrt{\text{budha}} + ta + si$ [*o*] → *buddho* – “the Awakened One”; Kacc 576).
 - v. *ta* → *gga* [together with final *j* of the root] / $\sqrt{\text{bhanja}}$ __
(e.g. $\sqrt{\text{bhanja}} + ta \rightarrow \text{bhagga}$ – “broken”; Kacc 577).
 - vi. *ta* → (CC) / $\sqrt{\text{bhanja}}$ etc. __, final root consonant → Ø
(e.g. $\sqrt{\text{cāja}} + ta \rightarrow \text{catta}$ – “given up”; Kacc 578).
 - vii. *ta* → (CC) / $\sqrt{\text{vaca}}$ __, *v* [of $\sqrt{\text{vaca}}$] → *u* [occasionally], *c* → Ø
(e.g. $\sqrt{\text{vaca}} + ta \rightarrow \text{utta}$ – “said”; Kacc 579).
 - viii. *ta* → (CC) / $\sqrt{\text{vaca}}$ __, *v* [of $\sqrt{\text{vaca}}$] → *u* [occasionally],
c → Ø, Ø → *v* (e.g. $\sqrt{\text{vaca}} + ta \rightarrow \text{vutta}$ – “said”; Kacc 579).
 - ix. *ta* → (CC) / $\sqrt{\text{gupa}}$ etc. __, final root consonants → Ø
(e.g. $\sqrt{\text{līpa}} + ta \rightarrow \text{litta}$ – “annointed”; Kacc 580).
 - x. *ta* → *iṇṇa* / $\sqrt{\text{tara}}$ etc. __, final root consonants → Ø
(e.g. $\text{saṃ} + \sqrt{\text{pūra}} + ta \rightarrow \text{sampunṇa}$ – “well filled”; Kacc 581).

- xi. *ta* → *inna, anna, īṇa* / *√bhida* etc. __, final root consonants → Ø (e.g. *√bhida* + *ta* → *bhinna* – “broken”; Kacc 582).
- xii. *ta* → *nta* [occasionally] / prefix *pa* etc. + *√kamu* etc. __, final root consonants → Ø (e.g. *pa* + *√kamu* + *ta* → *pakkanta*; Kacc 584).
- xiii. *ta* → *kkha* and *kka* / *√susa, √paca, √saka* etc. __, final root consonants → Ø (e.g. *√susa* + *ta* → *sukkha* – “dried”; Kacc 583).
- xiv. *ta* → *ha* / *ha*-ending roots (except *√daha* and *√naha*) __, *h* [of the roots] → *ḷ* (e.g. *√baha* + *ta* → *bālḷha* – “grown”; Kacc 589).
48. Initial *a* [of *√yaja*] → *i* / __ *ṭṭha* (morphological resultant of *ta*; e.g. *√yaja* + *ta* → *yitṭha*; Kacc 610; see also pt. ii above for changes which result in *ṭṭha*).
49. Final consonants [of *ha, da, bha* of *√naha, √kudha, √yudha, √sidha, √labha, √rabha* etc.] → *da* / __ *dha* (morphological resultant of *ta*; e.g. *√labha* + *ta* → *laddha* – “obtained”; Kacc 611; see also pt. iv above for changes which result in *dha*).
50. Final component consonants *ha, dha* [of *√daha, √vaḍha*] → *ḍa* / __ *dha* (morphological resultant of *ta*; e.g. *√daha* + *ta* → *dadḍha* – “burnt”; Kacc 612; see also pt. iv above for changes which result in *dha*).
51. Regarding *kita* affixes *ta* and *ti*:
- Initial vowel [of *√jana*] → *ā* / __ *ta* or *ti* (e.g. *√jana* + *ta* → *jāta* – “born,” “arisen”; Kacc 585).
 - Final root consonant [of *√gamu, √khanu, √hana, √ramu* etc.] → Ø [occasionally] / __ *ta* or *ti* (e.g. *√khanu* + *ti* → *khati* – “digging”; Kacc 586). Exception: Ø → *i* as per pt. 67 below (Kacc 617).
 - Final *r* [of *√kara, √sara* etc.] → Ø / __ *ta* or *ti* (e.g. *pa* + *√kara* __ *ti* → *pakati* – “original [or ‘natural’] form”; Kacc 587).

- iv. Vowel *ā* [of *√thā*, *√pā* etc.] → *i* or *ī* respectively / __ *ta* or *ti* (e.g. *√pā* + *ti* → *pīti* – “act of drinking”; Kacc 588).
52. *ta* [of *kita* affix *tabba*] → *raṭṭha* / *√sāsa*, *√disa* etc. __ (e.g. *√disa* + *tabba* + *si* [*aṃ*] → *daṭṭhabbam*; Kacc 572, elision of *r* according to Kacc 539).
53. *tum* suffix → *raṭṭhum* / *√sāsa*, *√disa* etc. __ (e.g. *√disa* + *tum* = *daṭṭhum*; Kacc 573; elision of *r* according to Kacc 539).
54. Regarding *kita* affix *ṇa*:
- i. *nja* [of *√ranja*] → *j* / __ *ṇa* (Kacc 590).
 - ii. *√hana* → *ghāta* / __ *ṇa* (e.g. *go* + *√hana* + *aka* + *si* [*o*] → *goghātako* – “the one who kills cows”; Kacc 591).
 - iii. *√hana* → *vadha* / __ *ṇa* (e.g. *√hana* + *ṇa* + *si* [*o*] → *vadho* – “the one who kills”; Kacc 592).
 - iv. vowel *ā* [of *ā*-ending roots] → *āya* / __ *ṇa* (e.g. *√dā* + *aka* + *si* [*o*] → *dāyako* – “a donor”; Kacc 593).
55. *√kara* → *kha* / *pura*, *saṃ*, *upa* and *pari* __ (e.g. *saṃ* + *√kara* + *ta* → *saṅkhata* – “conditioned,” “prepared”; Kacc 594).
56. *√kara* → *kā* / __ *kita* suffixes *tave* and *tuna* (e.g. *√kara* + *tuna* → *kātuna* – “having done”; Kacc 595).
57. *m* and *n* [of *√gamu*, *√khanu*, *√hana* etc.] → *n* [occasionally] / __ *kita* affixes *tum* and *tabba* (e.g. *√gamu* + *tabba* + *si* [*aṃ*] → *gantabbam* – “that which should be done”; Kacc 596).
58. *Kita* suffixes *tuna*, *tvāna*, *tvā* etc.:
- i. → *ya* [occasionally] / after all roots __ (e.g. *ā* + *√dā* + *tvā* → *ādāya*; Kacc 597).
 - ii. → *racca* [occasionally] / all *ca*- and *na*-ending roots __ (e.g. *vi* + *√vica* + *tvā* → *vivicca* – “having renounced,” “being far from”; Kacc 598).
 - iii. → *svāna*, *svā* [occasionally] / *√disa* __ (e.g. *ā* + *√disa* + *tvā* → *disvā*; Kacc 599).

- iv. → *mma*, *yha*, *jja*, *bbha*, *ddha* [occasionally] *ma-*, *ha-*, *da-*, *bha-* ending roots __ (e.g. *ā* + *√gamu* + *tvā* → *āgamma* – “having come”; Kacc 599).
59. Ø → *i* / root __ all affixes (*ririya*, *tabba*, *ta*, *tvā* etc.; e.g. *√vida* + *tabba* → *viditabba*; Kacc 605).
60. The first *n* [of some roots] → *ṇ* (e.g. *√ranja* + *ṇa* + *si* [o] → *raṇgo* – “act of coloring”; Kacc 607).
61. *√ge* → *gī* [whenever appropriate] (e.g. *√ge* + *ta* + *si* [aṃ] → *gītaṃ* – “music”; Kacc 608).
62. *√sada* → *sīdā* [always] (e.g. *ni* + *√sada* + *a* + *ti* → *nisīdati*; Kacc 609).
63. *√gaha* → *ghara* [occasionally] / __ affix *ṇa* (e.g. *√gaha* + *ṇa* + *si* [aṃ] → *gharaṃ* – “house”; Kacc 613).
64. *da* [of *√daha*] → *ḷa* [occasionally] / __ affix *ṇa* (e.g. *pari* + *√daha* + *ṇa* + *si* [o] → *pariḷāho* – “burning”; Kacc 614).
65. Final consonant [of a root] → Ø / __ *kita* affix *kvi* (i.e. other roots themselves; Kacc 615).
66. Ø → *ū* / *√vida* __ *kita* affix *kvi* (e.g. *lokavidū* – “the knower of the world”; Kacc 616).
67. **(a)** When an inserted *i* (as per Kacc 605) is already positioned, the final consonants [of *√hana*, *√gamu*, *√ramu*, *√saka*, *√kara* etc.] are not elided with *ta* affixes. **(b)** Applicable affixes are: *tabba*, *tum*, *tvā* and *tvāna*. **(c)** Inapplicable exceptions are: *tave*, *tāye*, *tavantu*, *tāvi* and *teyya* (Kacc 617; Thitzana, 2016: 756).
68. *r* [of *√kara*] → *t* / __ *tu* (e.g. *√kara* + *ritu* + *si* [→ Ø] → *kattā* – “the one who does”; Kacc 619).
69. *r* [of *√kara*] → *t* [occasionally] / __ *tum*, *tuna*, *tabba* (e.g. *√kara* + *tuna* → *kattuna*; Kacc 620).
70. The final component consonant *c* [of *√paca* etc.] and *j* [of *√yaja* etc.] → *k* and *g* respectively / __ affix *ṇa* (e.g. *√yuja* + *ṇa* + *si* [o] → *yogo*; Kacc 623) but not / __ *ṇvu* affixes (Kacc 618).

Uṇādi Rules

1. Initial vowel [of \sqrt{gaha}] $\rightarrow ge$ [occasionally]
(e.g. $\sqrt{gaha} + a + si [aṃ] \rightarrow gehaṃ$ – “house”; Kacc 629).
2. su [of stem $masu$] $\rightarrow cchara$ or $cchera$ (e.g. $masu + kvi + si [o] \rightarrow maccharo$ – “jealousy”; Kacc 630).
3. $\sqrt{cara} \rightarrow cchariya$, $cchara$ or $cchera$ / \bar{a} __, $\bar{a} \rightarrow (\check{V})$
(e.g. $\bar{a} + \sqrt{cara} + kvi + si [aṃ] \rightarrow accharam$; Kacc 631).
4. tha [of \sqrt{matha}] $\rightarrow la$ (e.g. $\sqrt{matha} + a + si [o] \rightarrow mallo$ – “wrestler”; Kacc 634).
5. Some roots which end in c and $j \rightarrow k$ and g respectively / __
 η -initial affix (e.g. $\sqrt{sica} + \eta a + si [o] \rightarrow seko$ – “pouring”; Kacc 640).
6. una [of stem $suna$ – “dog”] $\rightarrow oṇa$, $vāna$, $uvāna$,
 $\bar{u}na$, $unakha$, una , \bar{a} or $\bar{ā}na$ (Kacc 647).
7. Stem $taruṇa \rightarrow susu$ (Kacc 648).
8. uva [of stem $yuva$] $\rightarrow uvāna$, una or $\bar{u}na$
(e.g. $yūno$ – “youth”; Kacc 649).
9. \bar{u} , u and asa [of $\sqrt{sū}$, \sqrt{vu} , \sqrt{asa}] $\rightarrow ata$, $\emptyset \rightarrow$ affix tha
($\sqrt{sū} + tha + si [aṃ] \rightarrow satthaṃ$ – “a weapon”; Kacc 660).
10. $\sqrt{hi} \rightarrow herañ$ or $hīraṇ$ / $paṭi$ __ (e.g. $paṭi + \sqrt{hi} + kvi + si [aṃ] \rightarrow pāṭihīraṃ$ or $pāṭiheraṃ$ – “miracle”; Kacc 662).
11. Stem $putha \rightarrow puthu$, $patha$, $\emptyset \rightarrow$ affix ama ⁶⁷ [occasionally]
(e.g. $putha + kvi [\rightarrow \emptyset] + si [\rightarrow \emptyset] \rightarrow pathavī$ – “earth”; Kacc 666).

⁶⁷ For an example, refer to the section “Ordinal Numerals.”

Vowel Gradation

(a) Root vowels may vary in “strength” or appear in various “grades,” which means that they are changed into another vowel sound. (b) This process is called “strengthening” or “vowel gradation” and occurs regularly in the formation of verbal stems, non-finite verbs (i.e. infinitives and absolutes) and in the derivation of words while appending certain affixes (see chapters “*Kita and Taddhita Affixes*” and “*Uṇādi Affixes*”; Dhammajoti, 2018: 20; Duroiselle, 1906/1997: 23). (c) Three grades exist in Pāli, named and following a generic paradigm as illustrated in Table 1 below.

Table 1. *Vowel Gradation*

Unstrengthened (<i>avuddhika</i>)	Strong (<i>guṇa</i>)	Increase (<i>vuddhi</i>)
–	<i>a</i>	<i>ā</i>
<i>i, ī</i>	<i>e, aya</i>	<i>e, āya</i>
<i>u, ū</i>	<i>o, ava</i>	<i>o, āva</i>

(a) The ancient grammarians explain these processes as an absence and prefixing (or “increase”) of the letter *a* respectively (Dhammajoti, 2018: 20; Warder, 1963/2001: 12) or as the replacement of *i* and *u* by *e* and *o* respectively (Kacc 401). (b) These processes can also be reversed; an instance of such is called *viparīto* (“reversal”; Thitzana, 2016: 569). (c) Examples of vowel gradation can be conveniently given with the words *bhūta* (unstrengthened form), *bhavati* and *hoti* (strengthened form), *bhāveti* (increased form), which are all formed from $\sqrt{bhū}$. (d) The increase morpheme $o \rightarrow ava$, $e \rightarrow aya / \sqrt{bhū}$, \sqrt{cu} etc. / __ vowel (e.g. $\sqrt{cu} + a + ti \rightarrow cavati$; Kacc 513–514). (e) Vowel $o \rightarrow āva$, $e \rightarrow āya$ / __ causative affix [*e, ya*] (e. g. $\sqrt{lū}^{68} + e + ti \rightarrow lāveti$; Kacc 515).

⁶⁸ The *ū* of $\sqrt{lū}$ has previously been strengthened to *o*.

Parts of Speech (*padajāti*)

1. Nouns – incl. adjectives and pronouns (*nāmāṇi*).
2. Verbs (*ākhyātāṇi*).
3. Indeclinable prepositions and prefixes (*upasaggā* or *upasārā*).
4. Indeclinable particle – conjunctions, prepositions, adverbs and all other indeclinables (*nipātā*).

Sentence Structure and Syntax

(a) The main collections (sing. *nikāyo*) of Pāḷi Buddhist texts employ an idiom which usually bears a close affinity to the syntax of Vedic, thereby manifesting a closer linguistic connection to Indo-European than Classical Sanskrit; however, marked divergences from Vedic nevertheless exist (cf. Hendriksen, 1944: 81; Wijesekera, 1936/1993: 6). (b) In the Pāḷi language, the usual order within sentences is: subject (S; *kattā* – lit. “agent”) + object (O; *kammaṃ*) + verb (V; *kamma kiriyā*; e.g. *bhagavā* (S) *dhammaṃ* (O) *deseti* (V) – “The Blessed One teaches the *dhamma*,” DN III: 41 [DN 28]), with the verb at the end of the sentence (Yindee, 2018: 69). (c) An adjective normally precedes the noun it qualifies and a modifying adverb its verb. (d) “Adverbs of time always come first in the sentence” (Duroiselle, 1906/1997: 52).

(a) A regular yet not universal feature of prose portions in the Pāḷi language (as well as Vedic and Buddhist Hybrid Sanskrit) is the grouping of word elements with related or identical meaning (e.g. synonyms), a remnant of the oral style of composition and transmission, facilitating memory (Allon, 1997: 191; Anālayo, 2009: 740–1). (b) It is commonplace to encounter two, three or more adjectives qualifying the same substantive noun and to find a body of substantive nouns functioning as the sentence subjects or objects; the same principle of aggregation holds also true for verbs and adverbs (Allon: 191). (c) The arrangement of all these parts of speech is determined by the so-called Waxing Syllable Principle, influencing the sequential order according to the syllable

length of the word strings: each subsequent element stays either equal in syllable length or increases; waning does not occur (e.g. *bhīto samviggo lomahaṭṭhajāto* [syllable count: 2 + 3 + 6] – “frightened, agitated and gotten horripilation,” DN I: 24 [DN 2]; Anālayo: 740). **(d)** Exceptions to this are groupings of items which *must* belong together due to similar grammatical and morphological form, related meaning and doctrinal content (e.g. regarding the items of the noble eightfold path [*ariyo aṭṭhaṅgiko maggo*]; Allon: 191; Anālayo: 741). **(e)** When a sentence has two subjects, the last one determines the person for the corresponding verbs (Kacc 409). **(f)** The enclitics *me* and *te* are, as a rule, found in the second position of a sentence (Oberlies, 2019: 265). **(g)** Clauses are conjoined in the following ways (Perniola, 1997: 384, 390–1):

- They simply follow each other.
- Relative clauses and phrases:
 - ❖ With relative pronouns, adjectives or adverbs as the sentence initial of the subordinate clause, in correlation with a demonstrative pronoun, adjective or adverb introducing the main clause (e.g. *yo dhammaṃ passati so buddhaṃ passati* – “He who sees the *dhamma* is the one who sees the Buddha,” Mil: 35).
 - ❖ With a participle functioning as an adjective, agreeing with a noun (e.g. *addasā kho āyasmā rāhulo bhagavantaṃ dūratova āgacchantaṃ* – “Ā. Rāhula saw the Blessed One, who was coming from afar,” MN II: 40 [MN 61]).
 - ❖ With dependent-determinative, descriptive-determinative or attributive compounds⁶⁹ (e.g. *evaṃ kho, kassapa, bhikkhu sīlasampanno* [tappurisa compound] *hoti* – “thus, Kassapa, is a bhikkhu one who is possessed of virtue,” DN I: 81 [DN 8]).
- With the introduction of adverbs or adverbial phrases of time and space (e.g. *tadā* – “at that time”; *tattha* – “there”; *bhūtapubbaṃ* –

⁶⁹ See chapter “Compounds (*samāsā*)” for details.

“formerly”; *ekaṃ samayaṃ* – “at one time”; *tena samayena* – “at that time”; *atha kho* – “now then” etc.).

- With particles *ca* (copulative) and *vā* (disjunctive).
- Phrase *kuto pana* (“still less”) and words *pageva* (“still more”), *aññādatthu* (“except”; all adversative).
- With *seyyathāpi* (“just as”) contrasted with *evameva* (“just so”) and *yathā* (“just as”) contrasted with *tathā* (“so”; all comparatives).
- Consecutive and connected verbs may stand in the absolutive with the finite verb being placed last.

(a) It may often happen that the verb “to be” is not expressed but only implicitly understood (e.g. *rūpaṃ aniccaṃ* – “Form is impermanent”). **(b)** In the end, there are no hard and fast regulations about the sentence structure – the subject, to proffer an example, remains the subject even if it succeeds the object (e.g. *dhammaṃ buddho [S] deseti* – “Dhamma teaches the Enlightened One [S]”; Dhammajoti, 2018: 9, 12). **(c)** The word order is rarely of grammatical significance but in terms of style and emphasis rather relevant (Warder, 1963/2001: 15). **(d)** The vocative is unable to stand as sentence initial (Palistudies, 2018b). **(e)** Regarding case endings (see below), the *Padarūpasiddhi* (Rūp: 29) and Duroiselle (1906/1997: 24) mention that at times whole syllables are elided for the sake of meter or to facilitate simplicity (e.g. *abhiññāya sacchikatvā* → *abhiññā sacchikatvā*).

Nouns (*nāmāṇi*)⁷⁰

Kinds of Nouns (cf. Thitzana, 2016: 184–5)

1. Substantive Nouns (*nāmanāmāṇi*).
 - i. Common nouns (*sādhārananāmāṇi*).
 - ii. Proper nouns (*asādhārananāmāṇi*).
2. Adjectives (*guṇanāmāṇi*).
3. Pronouns (*sabbanāmāṇi*).
4. Compound nouns (*samāsanāmāṇi*; Kacc 601).
5. Nouns formed from *taddhita* affixes (*taddhitanāmāṇi*, incl. numerical nouns; Kacc 601).
6. Nouns formed from *kita* affixes (*kitanāmāṇi*; Kacc 601).⁷¹

General Characteristics

(a) In the Pāḷi language, there are no fundamentally distinct classes of substantive nouns, adjectives and pronouns, all being united under the broad category of *nāmaṇ* (noun), but individual differences nonetheless exist (Pandita, n.d.; Warder, 1963/2001: 7). (b) Substantive nouns and adjectives share declensions (see Table 3 in the “Tables” section) and are also part of the *samāsanāmāṇi*, *taddhitanāmāṇi* and *kitanāmāṇi* classes; e.g.:

- *Sāriputto; arindamo* (*nāmanāmaṇ*, *kitanāmaṇ* and *samāsanāmaṇ*).
- *Kaccāyano* (*nāmanāmaṇ* and *taddhitanāmaṇ*).⁷²

(a) Although adjectives bear the name of *guṇanāmaṇ* (“quality noun”) – indicating that they are a class of nouns qualifying other nouns – the lack of an absolute distinction between substantive nouns and adjectives can be seen in many instances; for example, the word *kusala* (“wholesome,” “skillful”) can stand as a substantive noun: *kusalaṇ* (“the wholesome”)

⁷⁰ Sing. *nāmaṇ*.

⁷¹ The last three-mentioned items are dealt with in separate chapters.

⁷² I am indebted to Ā. Kovida (Myanmar, aka Sayadaw U Kovida) for initially clarifying the concept for me and providing the examples (personal communication, April 11, 2020).

or operate as an attribute of another noun, as in *kusalo dhammo* (“the good *dhamma*”). **(b)** Compound nouns are simply combinations made up of members from the above-given noun classes (see the respective chapters for details). **(c)** Although particles (sing. *nipāto*) and prefixes (sing. *upasaggo* or *upasāraṃ*) cannot be classified under the rubric of nouns – possessing no gender and number – they can be subject to the rules of nouns when standing as independent words in a sentence; these are, however, exceptional cases (Thitzana, 2016: 185). **(d)** It should be noted that the case endings in these unusual instances are not permitted to remain attached to these words (Thitzana: 323).

General Formation

The formation of nouns in the Pāḷi language comes about in the following manner, conjoining two or more of these elements:

- Prefix (*upasaggo* or *upasāraṃ*).
- Root (*dhātu*).
- Kita affix (*kitapaccayo*).
- Taddhita affix (*taddhitapaccayo*).
- Interfix (*āgamo*).
- Suffix (*paccayo* or *vibhatti*), expressing:
 - ❖ Case.
 - ❖ Number.
 - ❖ Gender.

(a) For example, the substantive noun *āvāso* is formed from these elements: *ā* (*upasaggo*) + *√vas* + *a* (*kitapaccayo*) form the stem to which *si* [o] (*vibhatti*; singular nominative case masculine suffix) is appended; thus, finally → *āvāso* (“home,” “dwelling place”). **(b)** Another example to illustrate how an interfix is applied is given with the following. The adjective *mānasika* is broken up like this: *√māna* + *s* (*āgamo*) + *ika* (*taddhitapaccayo*) → *mānasika* (“related to mind”) or + *si* [aṃ] (singular nominative case neuter suffix – “that which is related to mind”) when functioning as a substantive noun. **(c)** Another interfix, consonant *n*, is

added in the formation of numerical nouns with dative suffix *naṃ* (e.g. *dvinnāṃ* – “two”; Kacc 67). **(d)** The rules of sandhi and morphology are regularly applied (i.e. assimilation, elision, insertion and reduplication; e.g. *√ana + ya* [*taddhitapaccayo*] → *añña* [pronoun] – “other,” “another”).⁷³

Gender, Number and Case

(a) In the Pāli language, three genders (sing. *liṅgaṃ*) exist for nouns: masculine (*pulliṅgaṃ*), feminine (*itthiliṅgaṃ*) and neuter (*napuṃsaka-liṅgaṃ*; Kacc 52; Oberlies, 2019: 199); two numbers: singular (*ekavacanaṃ*) and plural⁷⁴ (*bahuvacanaṃ*; Buddhadatta, 1937/1997: 3; Warder, 1963/2001: 7); three persons (sing. *puriso*): first (*paṭhamapuriso*), second (*majjhimapuriso*) and third (*uttamapuriso*),⁷⁵ with the indigenous grammatical tradition recognizing seven cases. Seven cases because it treats the vocative as standing apart from the rest (cf. Yindee, 2018: 58–9), although in modern grammars, we may find it included among the total count, therewith amounting to eight cases (Collins, 2006: 18–9). **(b)** Substantive nouns usually assume only one gender, whereas adjectives and pronouns are capable of standing in all three – variably corresponding to the gender, number and case of the nouns of which they are the attribute or correlate respectively. **(c)** However, a substantive noun, without changing form, can also possess two or all three genders (e.g. *kumāra* [“boy,” “prince”] can assume masculine [*kumāro*] as well as feminine forms [*kumārī*], and

⁷³ See chapters “Sandhi,” “Morphology” and “Kita and Taddhita Affixes” for details and for explanations on the characteristics of roots and stems the section “General Formation” in the chapter “Verbs (*ākhyātāni*).”

⁷⁴ The plural has basically replaced the dual in Pāli; only a few forms can be found (Oberlies, 2019: 201).

⁷⁵ This is the schema of the traditional Pāli grammarians – first and third persons given therein are the exact opposites in English (e.g. English first persons “I” and “we” are each classed as third person [*uttamapuriso*] in Pāli, and English third persons “he/she/it” and “they” each correspond to the first person [*paṭhamapuriso*] in Pāli); however, to forestall confusion, occurrences of grammatical numbers in Pāli – within the bounds of the present grammar – correspond, henceforth, to English usage.

kuddaka [“belly”] can occur in the masculine [*kuddako*], neuter [*kuddakam*] and feminine [*kuddakā*]; Geiger, 1916/1994: 67–8; Yindee: 58).

Substantive Nouns (*nāmanāmāni*)

As mentioned above, this classification includes common and proper nouns (cf. Buddhadatta, 1937/1997: 48).

- Common nouns: a group of unspecified people (*vāṇijo* – “merchant”), animals (*hatthī* – “elephant”), places (*nagaram* – “city”), things (*rukkho* – “tree”) and ideas (i.e. abstract nouns; *dhammo* – “norm,” “nature”).
- Proper nouns: specific persons (*sāriputto* – right-hand chief disciple of Lord Buddha), places (*rājagaho* – an ancient Indian city with that name) and organizations.

(a) As single entities, substantive nouns have usually merely one gender (of the three, as mentioned above), but as final members of attributive compounds,⁷⁶ substantive nouns can also assume all three genders – in which case they are used adjectivally (Collins, 2006: 17; Buddhadatta, 1937/1997: 4). (b) As mentioned in the previous section, a substantive noun may possess altogether two or even all three genders.

Adjectives (*guṇanāmāni*)⁷⁷

(a) As adverted to earlier, adjectives bear the name of *guṇanāmāni* (“quality nouns”), indicating that they are a class of nouns modifying other nouns, providing more information about them (Yindee, 2018: 55). (b) Adjectives are capable of standing, as mentioned above, in all three genders – assuming the gender, number and case of the nouns of which they are the attributes. They themselves lack intrinsic gender (Dhammajoti, 2018: 9). (c) If an adjective qualifies two or more nouns, it may agree with the sum (being plural then) or with the nearest. (d)

⁷⁶ See chapter “Compounds (*samāsā*)” for details.

⁷⁷ For the different stems of substantive nouns and adjectives as well as their declensions, see Table 3 in the section “Tables” at the end of this book.

The qualified words may also taken to be collective with the adjective in singular. **(e)** In case of gender conflict, the masculine has precedence over the feminine and the neuter over both. **(f)** They usually precede the qualified noun, but in the case of several adjectives modifying a noun, one adjective may precede and the rest follow. **(g)** An adjective following a substantive noun *usually* indicates the predication of it, with the attribute being emphasized and translated by a relative clause “who/which is ...” or an adjectival predicate (i.e. an adjective that follows a linking verb, such as “am,” “is,” “are,” “has been”), modifying the sentence subject (e.g. *vedanā aniccā* – “feeling is impermanent,” MN I: 146 [MN 35]; cf. Bodhi, 2020: 32–3). **(h)** Without a verb in the sentence (i.e. in equational sentences), this predication may take place regardless of the adjective’s positioning (cf. Warder, 1963/2001: 60–1). **(i)** The distinction between substantive nouns and adjectives is not an absolute, as previously explained (Warder: 62).

(a) Pronouns or pronominal adjectives are used as adjectives (Ānanda-maitreya, 1993/2012: 25). **(b)** Almost all pronouns become adjectives when they are used before a substantive noun of the same gender, number and case. **(c)** They are pronouns when they stand alone in a sentence. **(d)** Let it be reiterated briefly that stems in *a* are more common than any other (Geiger, 1916/1956: 159; Warder, 1963/2001: 8). **(e)** The following affixes are used to form adjectives: *a*, *ana*, *ika*, *ka*, *kaṭa*, *ma*, *mantu* (*mā*; possessive), *maya*, *min* (*mī*; possessive), *ra*, *so*, (*s*)*sī* (possessive), *tana*, *ti*, *tya*, *va*, *vantu* (*vā*; possessive), *vī*.⁷⁸

Three Grades of Adjectives

(a) To express the comparative form of adjectives, the following affixes are appended to nominal bases: *tara*, *iya*, *iyya* and for the superlative: *tama*, *iṭṭha*, *issika*, (*i*)*ma* (Ānandamaitreya, 1993/2012: 93; Duroiselle, 1906/1997: 59; Perniola, 1997: 48–9; Yindee, 2018: 55–6).⁷⁹ **(b)** In most cases, affixes *tara* and *tama* may be used interchangeably as well as *iya* for *iṭṭha*,

⁷⁸ See chapters “*Kita* and *Taddhita* Affixes” and “*Uṇādi* Affixes.”

⁷⁹ See Table 2 below for a summary.

issaka and vice versa (Duroiselle: 59). **(c)** Affix *tara* may be superadded to some forms of the comparative and superlative without affecting the meaning as conveyed by the initial affix. **(d)** Some adjectives have more than one form or are constructed irregularly (e.g. *antika* – “near” → *nediya* – “nearer” or *nediṭṭha* – “nearest”; Duroiselle: 60; Perniola: 49). **(e)** The comparative adjectives are primarily employed with nouns in the instrumental or ablative cases singular and the superlatives with the genitive and locative cases plural (e.g. *tayā mahiddhikataro* – “more powerful than you”; *tesaṃ sattamo* – “the best of them”; *tesu sattamo* – “best among them”; Ānandamaitreya: 93) – the adjective may also stand after the ablative case. **(f)** The declensions of adjectives of stems in *mantu* (*mā*), *vantu* (*vā*), *vī* are elided together with the antecedent vowel (e.g. *guṇavā* + *iya* → *guṇiyo* – “more virtuous”). **(g)** Depending on which gender they ought to take, the comparative and superlative forms are to be declined like neuter and masculine stems in *a* or feminine stems in *ā* (Duroiselle: 59–60). **(h)** Certain past participles, by themselves or as the final member of compounds, are used comparatively with the appropriate affixes (e.g. *paṇīta* – “excellent” → *paṇītatara* – “more excellent”). **(i)** Within comparative compounds, the first member commonly is the object of the comparison (e.g. *paṇītasāṅkhatatara* – “reckoned as more excellent”). **(j)** Some substantive nouns can also take the comparative affixes (e.g. *malatara* – “having a greater stain”) and certain pronouns, prepositions and adverbs are able to take both comparative and superlative affixes (e.g. *aññatama* – “one out of many”; *upari* – “above” → *uparima* – “uppermost”; Perniola: 50–1).

Table 2. *Comparative and Superlative Degree of Adjectives*

(Positive) Natural Adjective (<i>pakati-karuṇanāmaṃ</i>)	(Comparative) Distinctive Adjective (<i>visesa-karuṇanāmaṃ</i>)	(Superlative) Beyond-Distinctive Adjective (<i>ativisesa-karuṇanāmaṃ</i>)
<i>abhirūpa</i> ("beautiful")	<i>abhirūpatara</i> ("more beautiful")	<i>abhirūpatama</i> ("most beautiful")
<i>dhanavant</i> ("rich")	<i>dhavantatara</i> ("richer")	<i>dhanavantatama</i> ("richest")
<i>pāpa</i> ("evil")	<i>pāpīya/pāpiyya</i> ("eviler")	<i>pāpiṭṭha/pāpissika</i> ("most evil")

Note: Substantive nouns in *nt* take *a* before *tara* and *tama*, forming the alternative stem in *anta*. Sources: (a) Ānandamaitreya, B. (2012). *Pali made easy*. Buddhist Cultural Centre (original work published 1993). <https://archive.org/details/PaliMadeEasyOCRed>; (b) Perniola, V. (1997). *Pali grammar*. The Pali Text Society.

Participles

The participles have the nature of verbal adjectives and must, therefore, agree with the nouns they qualify in number, gender and case (Duroiselle, 1906/1997: 100; Oberlies: 571, f.n. 1; Perniola, 1997: 357).

Possessive Adjectives⁸⁰

Formation. (a) Commonly added are *vantu* (*vā*), *vī* (Perniola, 1997: 147). (b) The usual affixes that form possessives include: *a*, *āla*, *ālu*, *ava*, *ita*, *ika*, *imā*, *in* (*ī*) (strengthening as a rule takes place), *iya*, *ila*, *eyya*, *eyyaka*, *mantu* (*mā*), (*s*)*sī*, *vantu* (*vā*), *vī*. (c) The feminine of possessive adjectives formed with *mantu* (*mā*) and *vantu* (*vā*) is usually, but not invariably, constructed from the weakened base (Collins, 2006: 58).

Usage. (a) The possessive adjectives can be rendered into English as regular adjectives or in combination with such words and idioms as "having," "possessed of," "possessing" (e.g. *satimā* – "possessed of

⁸⁰ For the declensions of the adjectives and substantive nouns in *in* (*ī*), *mantu* (*mā*), *vantu* (*vā*), *vī*, see Table 3 in the "Tables" section and for further information on these as well as the remaining affixes, the chapter "Kita and Taddhita Affixes."

mindfulness [i.e. ‘mindful’]”; Kacc 369). **(b)** The possessive adjectives in *mantu* (*mā*), *vantu* (*vā*) and *in* (*ī*) are also used as substantive nouns when they don’t qualify any other noun⁸¹ (e.g. *dhanavanto* – “the wealthy one”; *gomī* – “cattle,” “a possessor of cattle”; Ānandamaitreya, 1993/2012: 53, 57; Duroiselle, 1906/1997: 150). **(c)** As is the case with other adjectives, possessive adjectives are capable of being rendered as relative clauses and participle clauses/constructions with present participles (e.g. [relative clause] *daṇḍi* – “the one who possesses [or ‘carries’] a staff”; [participle construction] *medhāvī* – “the one possessing wisdom”; Kacc 364, 532; cf. Hendriksen, 1944: 7, f.n. 2).

Adjectives from Pronominal Bases

(a) Duroiselle, 1906/1997: 77–8: Affixes *di* (*dī*), *disa*, *dikkha*, *disaka*, *risa* (“intimate,” “likeness,” “resemblance”) are, with lengthening of the base vowel, appended to pronominal bases to form adjectives (e.g. *ta* + *di* → *tādi* – “like him,” “like that,” “such”). **(b)** For that purpose, affixes *tara*, *tama* (see above) are also added to the bases of interrogative pronouns, but the meaning differs just a little from that of the respective bases (e.g. *katara* – “which [of two]?”; *katama* – “which [of many]”).

Pronouns or Pronominal Adjectives (*sabbanāmāṇi*)

Kinds of Pronouns

1. Personal pronoun (*puggalanāmaṃ*).
2. Demonstrative pronoun (*nidassananāmaṃ*).
3. Relative pronoun (*anvayīnāmaṃ*).
4. Interrogative pronoun (*pucchānāmaṃ*).
5. Indefinite pronoun (*anīyamanāmaṃ*).
6. Possessive pronoun (Collins, 2006: 61; Nwe Soe, 2016: 205; Perniola, 1997: 52).

⁸¹ Most, presumably all, of those formed with the other affixes too.

General Characteristics

(a) Substantive nouns and adjectives may qualify their referent words, but pronouns act as mere pointers to these (Collins, 2006: 62). (b) They are officially regarded as belonging to the category of nouns (*nāmāṇi*), as mentioned above, and do not constitute a separate class of words. (c) Pronouns can stand in all genders, as they can represent all things and persons of the different genders apiece (Thitzana, 2016: 287) but are not able to be in the vocative case. (d) We can find three persons for pronouns, singular and plural. (e) Almost all pronouns become adjectives when they are used before a noun of the same gender, number and case (e.g. *so puriso* – “that man”). (f) They are pronouns when they stand alone in a sentence (Buddhadatta, 1937/1997: 49–50). (g) Pronouns can also act as noun substitutes (e.g. *sā bhuñjati* – “She eats”; Collins: 62; Warder, 1963/2001: 7) and are oftentimes merely implied (e.g. *bhuñjati* – “He eats”). (h) As a means of showing respect, especially (but not exclusively) to persons of higher rank, it is possible that the first and second person plurals of pronouns may replace the respective singular forms; this usage is known as the “honorific plural” (e.g. [possibly] *yo amhākaṃ rājaputto vā rājamahāmatto* – “the one who is our prince and prime minister [...]”, Mil: 44). (i) The second person singular, on the other hand, is used for peers and subordinates, as with German “du” (Collins: 65).

General Formation⁸²

(a) For a description on the general features of the formation process of nouns (incl. pronouns), see the above section of the present chapter having the same name as this one (i.e. “General Formation”), with some additional specifics in the following. (b) The *i* and *a* vowels of pronouns may lengthen when in certain combinations with \sqrt{disa} , so too then vowel *i* of \sqrt{disa} (e.g. *ya + \sqrt{disa} + kvi \rightarrow yādiso* – “any kind of person”; Kacc 642). It may be that the *d* of $\sqrt{disa} \rightarrow r$, and its *s \rightarrow sa, kkha* or *ī* in the process

⁸² For a part of different pronouns and their declensions, see Table 4 in the “Tables” section as well as the following.

(e.g. *yādikkho*; Kacc 642). (c) In the formation of the nominative case, all pronouns may take interfix consonant *k* (e.g. *sabbako* – “all”; Kacc 178).

The Traditional Inventory of 27 Pronouns (sabbanāmāni)

(1) *sabba* (“all”), (2) *katara* (“which [of two]?”), (3) *katama* (“which [of many]?”), (4) *ubbaya* (“both”), (5) *itara* (“other [of two]”), (6) *añña* (“other [of many]”), (7) *aññatara* (“other [of many]”), (8) *aññatama* (“a certain [of two]”), (9) *pubba* (“former”), (10) *para* (“another”), (11) *apara* (“another”), (12) *dakkhiṇa* (“right,” “south”), (13) *uttara* (“upper,” “north,” “more than”), (14) *adhara* (“lower”), (15) *ya* (“who,” “what”), (16) *ta* (“he,” “that”), (17) *eta* (“this”), (18) *ima* (“this”), (19) *amu* (“that”), (20) *kiṃ* (“what?”, “why?”), (21) *eka* (“one”), (22) *ubha* (“both”), (23) *dvi* (“two”), (24) *ti* (“three”), (25) *catu* (“four”), (26) *tumha* (“you”), (27) *amha* (“I,” “we”) (Sadd I: 150; Collins, 2006: 61).

Personal Pronouns

Usage. (a) Personal pronouns of the first and second persons do not possess gender and invariably operate as substantive noun substitutes (Collins, 2006: 62). (b) Enclitic genitive, dative, instrumental singular *me* (“by me,” “my,” “mine”) and genitive, dative, instrumental and ablative plural *no* (“our,” “for us,” “by us,” “from us”) are never used at the beginning of a sentence (Duroiselle, 1906/1997: 68), the same holds true for *te*. (c) For enhanced emphasis, the personal pronouns are found with relative pronoun *yo* (e.g. *lābhā vata me, suladdhaṃ vata me, yohaṃ evarūpehi sabrahmacārīhi saddhiṃ viharāmī* – “It is indeed a gain for me, a great gain for me, that I dwell together with such fellow companions in the holy life,” MN I: 135 [MN 31]; Duroiselle: 74).

Demonstrative Pronouns

Usage. (a) The pronouns of absence, formed from the stem *ta(d)*, are employed to refer to someone or something previously mentioned in a narrative or to absent persons or things.⁸³ (b) They might serve as

⁸³ Pronoun *ena* is used in the same way (Oberlies, 2019: 277).

a connecting element between two sentences or to extend paragraphs or sections and be translated as “that” etc. (e.g. *etthantare yaṃ caritaṃ, sabbaṃ taṃ bodhipācanaṃ* – “What conduct there is in the interim, all that is a maturing of enlightenment,” Cp: 1; *yamaḥaṃ jānāmi, taṃ tvaṃ jānāsi* – “What I know is that what you know!”, DN I: 41 [DN 3]). **(c)** They may also function as personal pronouns “he,” “she,” “it” and other forms of those. **(d)** The forms with *n* substitute (e.g. *enaṃ*)⁸⁴ usually refer to a noun which was already mentioned. **(e)** Besides these usages, forms of *ta(d)* can also be employed adverbially in all oblique cases (e.g. *taṃ* [acc.] – “thereto,” “therefore,” “that is why,” “now,” “then”; *tamenāṃ* – “at once”; *tassa* [gen.] – “therefore”; *yena* [...] *tena* [instr.] – “where [...], there,” “here and there”; *tasmā* [abl.] – “for this reason,” “therefore”; *tato* – “from there,” “thence”; *tahiṃ* [loc.] – “there,” “therefore”; *tahaṃ* – “there”; Oberlies, 2019: 260, 270, f.n. 1; PED, s.v. “ta”). **(f)** They are also used pleonastically, giving emphasis (e.g. *sohaṃ* – “I” [lit. “that I”]).⁸⁵

(a) Demonstrative pronouns formed from pronominal stem *eta(d)* are used to point to someone or something present in direct speech or to what immediately precedes or follows – they may be translated as “this” etc. (Collins, 2006: 63; Oberlies, 2019: 274; Warder, 1963/2001: 29); they may also operate as the personal pronouns “he,” “she,” “it” etc. **(b)** Demonstrative pronouns with stems in *ta(d)/eta(d)* are often used to give slight emphasis to the subject or as something approximating the English article “the.”

(a) Demonstrative pronouns formed from the pronominal stem in *ima* (such as *ayaṃ*) are used similarly but convey a special sense of proximity or immediacy, whereas those constructed from *eta(d)* are merely indefinite (Oberlies, 2019: 284; Warder, 1963/2001: 30). **(b)** They may be rendered into English with “this (here)” etc. **(c)** For enhanced emphasis, the pronouns *ayaṃ* and *so/eso* are applied pleonastically with relative *yo* (e.g. *tasmā yoyaṃ me attapaṭilābho* – “therefore, this is the acquisition

⁸⁴ These are given in Table 4 in the “Tables” section.

⁸⁵ For the usage with a relative pronoun giving emphasis, see below.

of personality for me,” Sv-pt: 135; Duroiselle, 1906/1997: 74). **(d)** The pronouns formed from *amu* imply a sense of being far away and may be translated as “yonder” etc. (Collins, 2006: 63; Warder: 30).

Relative Pronouns

Formation. **(a)** Relative pronouns are mainly found building relative clauses (e.g. *yo dhammaṃ passati, so buddhaṃ passati* – “He who sees the dhamma is the one who sees the Buddha,” Mil: 35), but some are employed as indeclinables (Warder, 1963/2001: 70). **(b)** Neuter singular of *ya(d)* is used preceding vowels and in compounds (Duroiselle, 1906/1997: 74). **(c)** The relative pronouns take their gender and number from the antecedent (the modified element from the main clause) in relative clauses, but case is determined according to their function in the relative clause (Collins, 2006: 68). **(d)** The relative clause regularly precedes the main clause (Warder: 71), though it may be that the correlating pronoun (with its clause) precedes the relative one (e.g. *amataṃ tesaṃ bhikkhave sacchikataṃ, yesaṃ kāyagatāsati sacchikatā* – “Those, bhikkhus, that have realized the deathless are those who realized mindfulness directed to the body,” AN I: 29 [AN 1.627]; Dhammajoti, 2018: 103).

Usage. **(a)** Relative pronouns are commonly translated with “who” or “which,” in the three genders. **(b)** As a simple marker of a relative clause or a connector of a subordinate clause, it may function as an indeclinable and be translated as “that,” “since,” “if,” “whereas” etc. (e.g. *nesa dhamma, mahārāja, yaṃ tvaṃ gaccheyya ekako* – “It is not right, great king, that you might go alone,” Jā II: 188 [Jā 547]; Dhammajoti, 2018: 102). **(c)** For the sake of emphasis, the relative pronoun *yo* is used pleonastically with demonstrative pronouns *ayaṃ* and so as well as with personal pronouns (or *eso*; e.g. *yo so, āvuso, bhikkhu kāmesu avītārāgo hoti [...], tasssa cittaṃ na namati ātappāya [...]* – lit. “That bhikkhu, friend, who has not been without passion regarding sensuality, his mind does not bend toward ardor,” DN III: 105 [DN 33]; Duroiselle, 1906/1997: 74). **(d)** To express the sense of generalization, the pronoun *ya(d)* can be employed thus:

- Repetition of *ya(d)* and the correlative in a distributive sense (e.g. *yo yo [...] ādiyissati, tassa tassa dhanamanuppadassāmi* – “Whoever will take up, to him I will give,” DN III: 27 [DN 26]).
- In combination with its correlative (e.g. *yasmiṃ tasmīṃ* – “in whatever place/case”).
- In combination with the indefinite pronouns (e.g. *yaṃ kiñci* – “whatever”).

(a) The form *yadidaṃ* can be employed in a variety of ways (e.g. “that is to say,” “since,” “which is this,” “namely”; Collins, 2006: 69). **(b)** The instrumental form *yena* in combination with a verb of motion carries the import of “where,” “toward” and governs the nominative case (Warder, 1963/2001: 73); in that sense, constructions with *yena [...] tena* may be translated as “where [...], there” (e.g. *yena bhagavā tenupasaṅkami* – “Where the Blessed One was, there [he] went,” Vin I: 4 [Pār 1]). **(c)** The relative pronouns in all oblique cases are also used adverbially (e.g. *yena* [instr.] – “where” or “at which place”; *yena yena* [instr.] – “wherever”; *yahiṃ* [loc.] – “where” or “whither”; *yasmā* [abl.] – “because” [corresponding with *tasmā*]; Oberlies, 2019: 260, f.n. 1, 270; PED, s.v. “*ya*”).

Interrogative Pronouns

Formation and Usage. **(a)** Interrogative pronouns are used to formulate questions (Collins, 2006: 67). **(b)** There is no equivalent to a question mark in the Pāli language; however, if a sentence contains an interrogative pronoun, the whole sentence takes on an interrogative sense. **(c)** It is also possible that a sentence contains no such pronoun but that the context imposes an interrogative sense (Warder, 1963/2001: 73–4). **(d)** The particles *su/ssu*, *nu* and *no*⁸⁶ are used with interrogative pronouns for emphasis (PED, s.v. “*ka*”; Perniola, 1997: 56). **(e)** As mentioned in the

⁸⁶ The last two-mentioned particles are used to signify doubt, by themselves or with an interrogative pronoun or adverb. They are oftentimes followed by *kho* (e.g. *ko nu kho, bho gotama, hetu ko paccayo [...]* – “Now what is the reason, dear Gotama, what the cause [...]?”), DN I: 68 [DN 5]; Oberlies, 2019: 282, f.n. 2).

section on adjectives: “[...] affixes *tara*, *tama* [...] are also added to the bases of interrogative pronouns, but the meaning differs just a little from that of the respective bases (e.g. *katara* – ‘which [of two]?’; *katama* – ‘which [of many]’).” (f) *Kena* (instr.), *kasmā* (abl.) and *kissa* (gen.) are also employed adverbially, meaning “why?”, “wherefore?”; *kiṃ* (acc.) is oftentimes used with the instrumental to express the meaning of “what is the use of.” (g) Interrogative pronouns in all oblique cases may be used adverbially as well (Oberlies, 2019: 260, f.n. 1, 270; Palistudies, 2018f).

Indefinite Pronouns

Formation and Usage. (a) Indefinite pronouns don’t refer to any person, thing or amount specifically. They are inexplicit, “not definite.” (b) Sometimes, substantive nouns are constructed from indefinite pronouns (e.g. *kiñcanaṃ* – “defilement”; Oberlies, 2019: 283). (c) They are formed in the following ways (Ānandamaitreya, 1993/2012: 81; Duroiselle, 1906/1997: 75; Perniola, 1997: 56–7; Warder, 1963/2001: 85–6):

- Addition of *ci* (*cid* before a vowel), *cana* (*canaṃ* is also found), *api* or *pi* to the interrogative pronouns (e.g. *kiñci*, *kācana*, *kampi*).
- Twofold repetition of the demonstrative or relative pronoun (e.g. *so so* – “anyone”; *taṃ taṃ*, in the sense of “several,” “various”).
- Joining a relative with an indefinite (e.g. *yaṃ kiñci* – “whatever”).
- Joining a negative with an indefinite (e.g. *na kiñci* – “nothing”).

Possessive Pronouns

Formation and Usage. (a) Some possessive pronouns form from the base of the first and second personal pronouns by means of affixes *īya* and *aka*, with occasional lengthening of the base vowel (e.g. *mad* + *īya* → *madīya*; *mam* + *aka* → *māmaka* – “mine”; Duroiselle, 1906/1997: 77). (b) The word *attano* (dative/genitive) can be used as a possessive pronoun (in all three genders, singular as well as plural), meaning “himself,” “oneself,” “myself,” “yourself,” agreeing with the subject of the clause or sentence (e.g. *attāpi attānaṃ na upavadati* – “and he does not blame himself,” MN

II: 53 [MN 65]). **(c)** As a possessive adjective, it stands for: “his own,” “her own,” “my own” etc. **(d)** Other possessive pronouns and adjectives include: *sayam* and *sāmaṃ* (“oneself,” “self,” “myself” etc.; e.g. *sāmaṃ diṭṭhaṃ* – “seen by oneself”); *saka* and *sa* (“one’s own”; Perniola, 1997: 57; Warder, 1963/2001: 187). **(e)** The genitive of the personal pronouns for both persons also articulates a possessive sense (e.g. *mayhaṃ*, *tuyhaṃ*, *tassa*; Perniola: 57).

Pronominal Derivatives (Adjectives, Adverbs)

Adjectives (Duroiselle, 1906/1997: 77–8). **(a)** Certain affixes added to pronominal bases form a great number of adjectives: *di* (*dī*), *disa*, *dikkha*, *disaka*, *risa* intimate likeness and resemblance, with lengthening of the base vowel (e.g. *ta* + *di* → *tādi* – “like him,” “like that,” “such”). **(b)** As mentioned above: “[...] affixes *tara*, *tama* [...] are also added to the bases of interrogative pronouns, but the meaning differs just a little from that of the respective bases (e.g. *katara* – ‘which [of two]?’; *katama* – ‘which [of many]?’).”

Adverbs (Duroiselle, 1906/1997: 78–9). **(a)** Certain suffixes added to pronominal stems form also a great number of adverbs: *dā*, *dāni*, *rahi* express time (e.g. *karahi* – “when?”; *etarahi* – “now”). **(b)** Adverbs of place are formed by means of suffixes *to*, *tra*, *tha*, *dha*, *ha*, *haṃ*, *hiṃ* (e.g. *kattha* – “where?”; *yatra* – “where?”) – preceding a short vowel, the *t* of *tha* is doubled. **(c)** Suffixes *thā*, *va*, *vaṃ*, *thaṃ*, *ti* are used to form adverbs of manner (e.g. *tathā* – “thus,” “like that”; *kathaṃ* – “how?”). **(d)** Another *va* suffix is used to intimate time and cause (stem final *a* is lengthened), appended to pronominal stems of *ta*, *ya*, *ki* – final *t* is dropped since no consonant is permitted to stand as word final. If it precedes a vowel, it is retained in the form of *d* (e.g. *yāvadeva* – “ever so much,” “as far as,” “but only”). **(e)** The ablative singular suffix *tā* is added to the mentioned forms too (e.g. *yāvatā* – “as far as,” “because”).⁸⁷ **(f)** Suffix *di* is found merely in *yadi* (“if”), *ti* in *kati* (“how many”) and *yati* (“as many”).

⁸⁷ More examples of case forms used adverbially are listed above in the section “Demonstrative Pronouns,” pt. (e).

Action Nouns

Formation and Usage. (a) The use of action nouns in Pāḷi is frequent – they are formed with affixes *a*, *i*, *ana*, *anā*, *aka*, *taṃ*, *tā*, *ti*, *tta*,⁸⁸ added either directly to the root or the base (Perniola, 1997: 381). (b) Action nouns express the generic verbal idea without reference to time or person (e.g. *dassana* – “seeing”) and, in the manner of any other noun, assume the case form according to the respective syntactical function they perform within the sentence (e.g. *te kāyassa bheda* [instr.] *paraṃ maraṇā sugatiṃ sattaṃ lokam upapannā* – “With the breaking up of the body, after death, they are reborn in a good destination, in the heavenly world,” DN I: 40 [DN 2]; Hendriksen, 1944: 87). (c) They usually govern the genitive case (e.g. *brāhmaṇo pokkharasāti bhagavato* [genitive] *adhivāsanaṃ veditvā* [...] *kālaṃ ārocesi* – “The Brahmin Pokkharasāti, having found out [about] the Blessed One’s consent [...], announced the time,” DN I: 51 [DN 3]), but *dassanāya* stands also with the accusative (e.g. *sammāsambuddhaṃ dassanāya upasaṅkamissāma* – “We would approach to see the Perfectly Enlightened One,” MN II: 118 [MN 81]; Perniola: 381). (d) Action nouns may take objects, are modified by adverbs and are oftentimes continued with verbs (Hendriksen: 87).

Agent Nouns

Formation. (a) The affixes forming agent nouns are: *a*, *ana*, *aka*, *āvi*, *dha*, *i*, *in*, *ina* [after √*ji*], *ka*, *ma*, *ratthu* (*tar*), *ta*, *tra*, *tuka* [after √*gamu*], *uka*, *ū*⁸⁹ – they are appended to roots or bases (Collins, 2006: 113; Perniola, 1997: 378). (b) Letter *a* [of roots] → *i* [occasionally] / __ *ratthu* (*tar*), but final *ā* and *e* of roots remain unchanged (Ānandamaitreya, 1993/2012: 66). (c) An *i* is also inserted under other circumstances (e.g. √*bhāsa* → *bhāsitar*; Warder, 1963/2001: 209). (d) The affix *aka* is used after action nouns in *ana* to form agent nouns (Perniola: 155). (e) The affixes of the past active participle may be superadded to these affixes (e.g. *sutavā* – “he who has

⁸⁸ See the chapter “*Kita and Taddhita Affixes*” for more details.

⁸⁹ See chapters “*Kita and Taddhita Affixes*” and “*Uṇādi Affixes*.”

heard”). (f) Agent nouns are oftentimes found as the final member of dependent-determinative compounds⁹⁰ (Perniola: 378).

Usage – as Adjectives and Substantive Nouns. (a) Agent nouns are frequently encountered in Pāli (more so in the earlier strata of the language) and may be translated as “one who does [this or that]” or rendered simply by means of the English suffixes -er or -or, denoting someone or something who/which does the action described by the verb; i.e. the agent (e.g. *tathāgato [...] daṭṭhāraṃ na maññati* – “The Tathagata [...] does not conceive the doer,” AN IV: 16 [AN 4.24]; Hendriksen, 1944: 81–2; Perniola, 1997: 378). (b) They may act as common nouns to take an object in the accusative, genitive or dative case (e.g. *bahujanamanāpā tathārūpiṃ vācaṃ* [acc.] *bhāsītā* – “the one who utters such speech which is pleasing to many people”; *bhinnānaṃ* [gen.] [...] *sandhātā* – “a conciliator [...] of those who are divided,” DN I: 2 [DN 1]; Ānandamaitreya, 1993/2012: 66; Oberlies, 2019: 251, f.n. 4; Warder, 1963/2001: 209; Wijesekera, 1936/1993: 186). (c) Agent nouns are also placed in apposition to a noun or pronoun (e.g. *ahamasmi brahmā [...] issaro kattā nimmātā* – “I am Brahma [...], the lord, maker and creator,” DN I: 9 [DN 1]; Hendriksen: 84; Perniola: 379). (d) They are also capable of functioning as adjectives (Ānandamaitreya: 66).

Usage – as Verbs and Predicates. (a) Agent nouns in Pāli may express the main action of a sentence (e.g. *samaṇo gotamo, ito sutvā na amutra akkhātā imesaṃ bhedaṃ* – “The ascetic Gotama is not one who relates there what he has heard here for the division of those,” DN I: 2 [DN 1]). (b) They are also capable of denoting the action of a subordinate clause (e.g. *ahaṃ tena samayena purohito brāhmaṇo ahoṣiṃ tassa yaññassa yājetā* – “At that time, I was the king’s high priest, who was the performer of [or ‘who performed’] the sacrifice,” DN I: 68 [DN 5]; Warder, 1963/2001: 211). (c) Oberlies (2019: 251, f.n. 4) notes that “[s]yntactically they take either the accusative [...] or the genitive” (e.g. [genitive] *bhavissanti dhammassa aññātāro* – “There will be those who understand the dhamma,” MN I: 114 [MN 26]; Hendriksen, 1944: 82). (d) On account of the ambiguity of its

⁹⁰ See chapter “Compounds (*samāsā*)” for details.

temporal sense, the agent noun may be used to express the past, present and future tenses, thus denoting that which takes place at any time⁹¹ (e.g. [potentially future] *ayampi kho, mahānāma, puggalo agantā nirayaṃ* – “Now this person, Mahānāma, will not go to hell”; Hendriksen: 81, 83–4).

Grammatical Case (*vibhatti*)

Kinds of Cases

1. Nominative (*paṭhamā* or *paccattavacanāṃ*).
2. Accusative (*dutiyā* or *upayogavacanāṃ*).
3. Instrumental → ablative of instrument (*tatiyā* or *karaṇavacanāṃ*).
4. Dative (*catutthī* or *sampadānavacanāṃ*).
5. Ablative of separation (*pañcamī*, *avadhi* or *apādānaṃ*).
6. Genitive or possessive (*chaṭṭhī* or *sāmivacanāṃ*).
7. Locative (*sattamī*, *bhumnavacanāṃ* or *ādihāro*).
8. Vocative (*ālapana* or *āmantaṇavacanāṃ*).

*General Characteristics*⁹²

(a) Noun case suffixes⁹³ are affixed to nominal stems to indicate grammatical case. (b) The traditional Pāḷi grammars acknowledge seven cases in total, excluding the vocative for the overall tally (cf. Yindee, 2018: 58); however, as mentioned earlier, “in modern grammars, we may find it included among the total count, therewith amounting to eight cases” (Collins, 2006: 18–9). (c) For the sake of completeness, the list of the most elementary morphological case suffixes – contained within the classical grammars – will be given in the following (Kacc 55; Rūp: 32; Thitzana, 2016: 186–9; Yindee, 2018: 58). This listing is not an exhaustive guide to all the possible forms as shown in Table 3 in the “Tables” section but would prove to be essential if one wishes to navigate the explanations

⁹¹ There seem to be, however, no usages with an unequivocal future sense.

⁹² For an in-depth study about the various cases and their contextual applications see, for example, Wijesekera (1936/1993).

⁹³ See Table 3 in the “Tables” section for a comprehensive listing.

contained within the indigenous grammar books – one would also better understand some derivations tendered in this grammar (singular endings are to the left, plural ones to the right):

– Nominative	<i>si</i> (→ <i>o</i>)	<i>yo</i> (→ <i>ā</i>)
– Vocative	<i>si</i> (→ \emptyset)	<i>yo</i> (→ <i>ā</i>)
– Accusative	<i>aṃ</i>	<i>yo</i> (→ <i>e</i>)
– Instrumental	<i>nā</i> (→ <i>ena</i>)	<i>hi</i> (→ <i>ebhi</i>)
– Dative/Gen.	<i>sa</i> (\emptyset → <i>s</i>)	<i>naṃ</i> (→ <i>ānaṃ</i>) ⁹⁴
– Ablative	<i>smā</i> (→ <i>mhā, ā</i>) ⁹⁵	<i>hi</i> (→ <i>ebhi</i>)
– Locative	<i>smiṃ</i> (→ <i>mhi, e</i>) ⁹⁶	<i>su</i> (final <i>a</i> [of stem] → <i>e</i> / <i>_su</i>) ⁹⁷

To reiterate, the *Padarūpasiddhi* (Rūp: 29) and Duroiselle (1906/1997: 24) mention that whole syllables are at times elided for the sake of meter or to facilitate pronunciation (e.g. *abhiññāya sacchikatvā* → *abhiññā sacchikatvā*).

Usage of the Cases

1. Nominative

- Subject (*kattā* – lit. “agent”) of sentences or clauses, active or passive. This is the main use of this case (Wijesekera, 1936/1993: 39).
- Subject qualifiers: adjectives (*guṇanāmāni*), predicates (*kiriyaṇi*) or a term in apposition (e.g. [predicate] [...] *saṅgati phasso* – “The meeting [...] is contact,” MN I: 80 [MN 18]).
- Items in a *ti* clause.
- Viewpoint (in the sense of “as”; e.g. *pāmojjabahulo, dukkhassantaṃ karissati* – “one will, as one having much joy, put an end to suffering, Dhṛp: 26, v. 376).
- Text titles (e.g. *dīghanikāyo*).

⁹⁴ Vowel *a* [of stem] → (*ṽ*).

⁹⁵ Suffix may remain unchanged.

⁹⁶ Suffix may remain unchanged.

⁹⁷ Suffix may remain unchanged.

- Exclamations (of abstract nouns).
- Hanging nominative, introduces another phrase without grammatical connection (Kacc 281, 285; Collins, 2006: 19–20).
- The nominative can also be used instead of the locative (e.g. *evaṃ kilesamaladhova, vijjante amatantaḷe. na gavesati taṃ taḷākamaṃ, na doso amatantaḷe*⁹⁸ – “Just so there exists the pool of the deathless for the cleansing of the stains. If you don’t search out that pool, it is not the fault of the pool of the deathless,” Bv: 6; *bhikkhu nisinne mātuḡāmo upanisinno [...] hoti* – “While the bhikkhu is sitting, the woman has sat down closely,” Vin I: 157 [Ay 1]).

2. Accusative

- Direct object, incl. goal of motion (*kammaṃ*) – the main function of this case (Kacc 280; Wijesekera, 1936/1993: 58).
- Internal direct object (e.g. “He sang a song”).
- With abstract endings *ttamaṃ* and *tā* as object of verbs of motion or acquisition for change of state.
- Double accusative (e.g. *taṃ ahaṃ brūmi brāhmaṇaṃ* – “Him I call a Brahmin,” MN II: 203 [MN 98]).
- Viewpoint (in the sense of “in terms of,” “as”; e.g. *yo ca abhāsitaṃ alapitaṃ tathāgatenā abhāsitaṃ alapitaṃ tathāgatenāti dīpeti* – “he who explains that which has not been said and spoken by the Tathagata as what was not said and spoken by the Tathagata,” AN II: 7 [AN 2.24]).
- Various adverbial uses:

⁹⁸ The respective commentary explicitly identifies *kilesamaladhova* as a nominative employed in the sense of a locative: *kilesamaladhovanti kilesamalasdthane, bhummatthe paccattavacanaṃ* (Bv-a: 47). I am indebted to Bryan Levman, who pointed out this passage to me. Both occurrences might be explained on different grounds, so much so that this usage has to be considered unattested (Oberlies, personal communication, October 3, 2020).

- ❖ Time during which (e.g. *te tattha [...] ciraṃ dīghaṃ addhānaṃ titthanti* – “They stay there for a long stretch of time”; Kacc 298).
- ❖ Extent of space (e.g. *yojanaṃ* – “for a league”; Kacc 298).
- ❖ Manner (e.g. *sādhukaṃ manasikarohi* – “Apply your mind [i.e. ‘pay attention’] thoroughly!”, DN III: 75 [DN 31]).
- Object of various prepositions and postpositions: *pacchā, antarā, yathā, vinā, santike, anu, abhi, paṭi* (Collins, 2006: 20–3; Duroiselle, 1906/1997: 155–6).
- May be used in the sense of the genitive, ablative,⁹⁹ instrumental and locative (e.g. [locative] *so [...] pubbaṇhasamayaṃ nivāsetvā pattacīvaramādāya gāmaṃ vā nigamaṃ vā piṇḍāya pavisati* – “He [...], having dressed in the morning time and having taken his robe and bowl, enters a village or town for alms,” MN II: 63 [MN 67]; Kacc 275, 279, 297, 306–307).

3. Instrumental

- The instruments (means) or things with which an action is completed; the fundamental use of this case (Kacc 279; Wijesekera, 1936/1993: 108).
- Logical subject of passive verbs (e.g. *svākkhāto bhagavatā dhammo* – “Well taught is the *dhamma* by the Blessed One,” DN III: 100 [DN 33]).
- Cause or reason (Kacc 289).
- Accompaniment (*saddhiṃ* and *saha* are not absolutely necessary; e.g. *[...] atha kho bhagavā āyasmataṃ aṅgulimālena pacchāsamaṇena yena sāvatthi tena cārikaṃ pakkāmi* – “and then the Blessed One went to Sāvatthi with Ā. Aṅgulimāla as his attendant monk,” MN II: 150 [MN 86]; Kacc 286).
- Manner.
- Attendant circumstances (e.g. *abhibhū bhikkhu [...] dissamānenapi kāyena dhammaṃ desesi* – “The bhikkhu Abhibhū [...] taught the *dhamma* with his body being visible,” SN I: 97 [SN 6.14]).

⁹⁹ With such words as *dūra* (“distant,” “far” etc.).

- Motion to a definite place can be expressed with *yena-tena* [“where-there”] constructions (e.g. *aññatarā devatā [...] yena bhagavā tenupasaṅkami* – “A certain deva went up to where the Blessed One was,” Khp: 2).
- Place (e.g. *bhagavā dakkhiṇena passena sīhaseyyaṃ kappesi* – “The Blessed One lay down on the right side,” DN II: 57 [DN 16]).
- Time (e.g. *tena samayena [...]* – “at that time [...],” DN II: 38 [DN 16]).
- Comparison (e.g. *na tena seyyo sadiso ca vijjati* – “There exist none better or equal to him,” DN III: 65 [DN 30]; with *saha* at times in the sense of equality: “as”).
- Other adverbial uses.
- With *kiṃ* in the sense of “what is the use of [...]?”, “away with [...]!”, “no more of [...]!”; with *alaṃ*: “enough of [...]!”, “there is no need of [...]!” (Kacc 279, 286, 288–289; Collins, 2006: 23–7; Duroiselle, 1906/1997: 156–7).
- Applied also in the sense of the ablative¹⁰⁰ and locative (Kacc 275, 290, 296).

4. Dative

- Purpose, benefit, result. It primarily “denotes the thing with reference to which an action proceeds” (Kacc 109, 276; Wijesekera, 1936/1993: 156).
- With *attha* also in the sense of “for the sake of.”
- Direction (e.g. *appo saggāya gacchati* – “Few go to heaven,” Dhpm: 12, v. 174).
- Time (e.g. *dukkhamupenti punappunaṃ cirāya* – “For a long time, again and again, they undergo suffering,” Dhpm: 24, v. 342).
- Used also instead of the accusative and locative (Collins, 2006: 27–8; Duroiselle, 1906/1997: 154–5).
- The dative of nouns in *āya* is often used in the sense of the infinitive and may be applied in a future sense (e.g. *pākāya* – “in order to cook”; Kacc 653; Duroiselle: 109).

¹⁰⁰ With such words as *dūra* (“distant,” “far” etc.).

- The infinitive is at times fully interchangeable with the dative of purpose (cf. Warder, 1963/2001: 134; Wijesekera: 181).

5. Ablative

- The point from which, cause, origin, motive etc. – the primary significance of the ablative case and the very opposite of the dative (Wijesekera, 1936/1993: 192).
- **(a)** Measurement of distance and time (e.g. *ito so, bhikkhave, ekanavutikappe yaṃ vipassī bhagavā arahaṃ sammāsambuddho loke udapādi* – “Bhikkhus, ninety-one aeons ago [lit. ‘from now’] Vipassī arose in the world, the Blessed One, Worthy One, Perfectly Enlightened One,” DN II: 1 [DN 14]). **(b)** Used also with such words as *dūra* (“distant,” “far” etc.), *antika* (“near”) and others of related meaning (e.g. *āsanne ito naḷakāragāmo* – “The village Naḷakāra is near from here,” MN II: 210 [MN 99]).
- Used with words indicative of purity, freedom, release, dissociation and “a little” as well as with the word *pubba* (“former,” “before”; e.g. *lobhaniyehi dhammehi suddho asaṃsaṭṭho* – “It is pure and dissociated from greed-causing phenomena”).
- Comparison and, closely related to that, viewpoint (in the sense of “in terms of,” “as” [with ablatives ending in *to*]; e.g. *sārañca sārato ñatvā [...], te sāraṃ adhiḡacchanti* – “Having known the essential as the essential [...], they attain the essential,” Dhṛ: 1, v. 12).
- Certain adverbial forms: *tasmā* or *tato* (“therefore,” “thence”), *yasmā* or *yato* (“whence,” “because” etc.).
- Abstention from, with such words as *āraṭi* (“abstinence”).
- Used also in the sense of the instrumental, accusative, genitive and locative (Kacc 275; Collins, 2006: 28–31; Duroiselle, 1906/1997: 157–8; Wijesekera: 194, 218).

6. Genitive

(a) The genitive case is not merely used with verbs and substantive nouns but also with adjectives and adverbs, although normally it is found to qualify another noun. “It does so by assigning it to a particular class or description, or by distinguishing it as a part of a whole. So, the fundamental notion expressed by it is to mark the *belonging to* or *being part of*. This *possessive* or *partitive* application admits of the almost universal rendering of the gen. in Pāli as in the older languages by the English *of*” (Wijesekera, 1936/1993: 225). (b) So, the main sense is that of the first and second points below, with the remaining ones to follow also occurring in the language:

- Possessive (e.g. *tathāgatassa parinibbānaṃ* – “the final extinction of the Tathagata,” DN II: 45 [DN 16]).
- Partitive, in the sense of “from among,” “of these.”
- Subjective (e.g. [...] *pacchimakaṃ* [...] *tathāgatassa vesāliyā dassanaṃ bhavissati* – “This will be the Tathagata’s [...] last sight of Vesāli,” DN II: 52 [DN 16]).
- Objective (e.g. *māvamaññetha puññaṃ* – “You ought not disregard merit,” Dhṛp: 9, v. 122).
- Time (e.g. *na cirasseva anupādāya āsavehi cittaṃ vimuccī* – “Just after no long time [or ‘before long’], the mind was liberated from the defilements by non-clinging,” DN II: 16 [DN 14]).
- Used also instead of the accusative, ablative, instrumental and locative (Kacc 277, 301, 304, 308–309; Collins, 2006: 31–4; Duroiselle, 1906/1997: 154).

7. Locative

The primary meanings expressed by the locative case are: “place at which” (proximity, domain), “in which” (permeation), “on which,” “into which” and “from which” (e.g. *jalesu khīraṃ tiṭṭhati* – “The milk is in the water”; Kacc 278; Wijesekera, 1936/1993: 265), but it may comprise also the following:

- Comparison.
- Partitive, in the sense of “from among,” “of these.”
- “With regard to,” “in respect of,” “in re” (e.g. *ariyasāvako rūpasmiṃ nibbindati* – “The noble disciple is disgusted with regard to corporality,” MN I: 96 [MN 22]).
- Adverbial sense of space and time (e.g. *sacepi [...] taṃ bhagavantaṃ dasasu yojanesu [...]* – “even if [...] the Blessed One would be within ten leagues,” MN II: 137 [MN 84]).
- Adverbial (generally).
- Extensively used instead of the genitive, instrumental, dative and ablative (Kacc 278, 302, 304, 310–313; Collins, 2006: 34–7; Duroiselle, 1906/1997: 158–9).

Vocative

- Addressing listener (Collins, 2006: 37; Duroiselle, 1906/1997: 159).

Locative, Genitive, Accusative and Nominative Absolute

(a) A noun, pronoun or phrase together with a participle in agreement with it is called an absolute construction; it functions syntactically as an independent adverbial (i.e. qualifying) clause or phrase to denote time, manner or attendant circumstance (though not invariably) in relation to a main clause. (b) Its agent differs from the main clause or is impersonal (i.e. has no explicit agent; Collins, 2006: 37; Palistudies, 2018e; Wijesekera, 1936/1993: 302). (c) The presence of a participle separates this construction – having a subject and a predicate of its own¹⁰¹ – from the main clause and is thus considered freed or detached (Lat.: *absolutus*) from the remainder of the sentence; however, a logical tie always remains. (d) Absolute constructions occur with the locative, genitive, accusative and nominative cases (order of frequency), either with a present or past passive participle but never with the future passive participle or others, such as the past active participle

¹⁰¹ Wijesekera (1936/1993: 302) observes that the “absolute construction differs from the simple temporal or modal use of a case only in the predicative character of the participle.”

(Wijesekera: 302–3; however, see e.g. [past active participle] *therassa taṃ bhattaṃ thokaṃ bhuttavato kaṇṇasūlaṃ paṭippassambhi* – “When the elder had eaten that meal, the pain in the ear was allayed,” contained in the 1901 PTS edition of the *Vimānavatthu* commentary, Pd III [E^e]: 244).¹⁰²

(a) They discard their case-relevant meaning and may be translated as “when,” “while” (temporal), “since,” “because,” “as a result of” (causal), sometimes also as “although,” “even though” (concessive) and in the case of the locative and genitive absolutes – expressing a sense of contempt or disregard – oftentimes also as “in spite of,” “despite,” “notwithstanding”¹⁰³ (modal; Kacc 305, 313; Collins, 2006: 37–9; Duroiselle, 1906/1997: 160; Pali-studies, 2018e; Wijesekera, 1936/1993: 305–6). (b) When the main clause is interrogative, the absolute construction can be rendered into English with hypothetical clauses beginning with “supposing” or “now if” (Wijesekera: 307).

Locative absolute (*bhāvena bhāvalakkhaṇabhummāni*). (a) The locative absolute occurs frequently in Pāli and has many nuances, being occasionally syntactically complex (Wijesekera, 1936/1993: 303; e.g. *rudanta-smiṃ dārake pabbaji* – “He went forth in spite of his son weeping”; Kacc 305, 313). (b) Locative absolute phrase *atthe sati* can be rendered as “if, such being the case [...]”

Genitive absolute. (a) Wijesekera (1936/1993: 259) remarks that the genitive absolute is restricted “to a few standing phrases” and although “it is sometimes concurrent with the loc. absolute, it is still far from possessing the general character” of it (e.g. *so kho ahaṃ, bhikkhave [...]* *akāmakānaṃ mātāpitūnaṃ assumukhānaṃ rudantānaṃ kesamassuṃ ohāretvā [...]* *agārasmā anagāriyaṃ pabbajiṃ* – “In spite of the [my] parents being unwilling and crying, bhikkhus [...], I shaved off my hair and beard [...]

¹⁰² This edition is, however, not without problems (Kieffer-Pülz, 2019: 489). An unproblematic example from B^e is the following: [...] *gahapatissa [...]* *manuññaṃ bhojanaṃ bhuttāvissa bhattasammado hoti* – “[...] when a householder has eaten delicious food, there occurs drowsiness after the meal,” DN II: 80 [DN 17]; cf. Hendriksen (1944: 10).

¹⁰³ In the case of the locative abs. especially when the main clause is negative.

and went forth from home into homelessness,” MN I: 111 [MN 26]). (b) The genitive absolute is only found with present participles or past participles as final members of a compound, and its agent is invariably a living being (cf. Hendriksen, 1944: 44; Oberlies, personal communication, October 10, 2020).

Accusative absolute. A few instances demonstrate that the accusative case of some substantive nouns is used with a participle in agreement, constituting an obvious absolute construction (Wijesekera, 1936/1993: 98; e.g. *santaṃyeva kho pana paraṃ lokaṃ ‘natthi paro loko’ti vācaṃ bhāsati* – “Although the other world exists, he says ‘there is no other world,’” MN II: 34 [MN 60]).

Nominative absolute. *Samvattaṃamāno loko yebhuyyena sattā ābhassara-samvattaṇikā honti* – “When the world is collapsing, beings, for the most part, become Ābhassara gods” (DN I [E^e]: 17 [DN 1]; cf. Wijesekera, 1936/1993: 54).¹⁰⁴ It is worth quoting Wijesekera (p. 53) regarding this kind of absolute:

The nom. absolute is not a regular construction in either Pāli or Skr. It is not entirely absent in the latter but as an idiom is very rare [...]. Duroiselle also in his Pāli Grammar (§603.ii) refers to a nom. absolute in Pāli but gives no examples. In the Nikāyas we come across a few uses of the nom. with the participle in agreement, that appear to be as much legitimate absolute constructions as are the loc. or gen. absolute [...]. These even exhibit the temporal sense.

¹⁰⁴ The passage in Pāli is from the 1890 PTS edition (E^e). Interestingly, B^e has the same sentence in the locative absolute.

Numerals (*saṅkhyā*)¹⁰⁵

Kinds of Numerals

1. Cardinal.
2. Ordinal.
3. Distributive.
4. Fractional.
5. Multiplicative.
6. Substantive.

Cardinal Numerals

Formation. (a) Numerals 11, 12, 21, 22 etc. are two-word copulative compounds (e.g. *ekārasa* – “one and ten [i.e. ‘11’]”; *caturāsīti* – “four and eighty [i.e. ‘84’]”; *chappañca* – “five or six”). (b) The numerals which are to be added together can also be realized with the copulative particle *ca* (“and”); multiplication can be expressed by means of either juxtaposing or compounding the respective numerals (Oberlies, 2019: 297).¹⁰⁶ (c) Numerals 19, 29, 39 etc. are formed by *eka* (“one”) + the adjective *ūna(ka)* (“less”) + the immediately next higher cardinal numeral (e.g. *ekūnatimsati* – “29”). (d) *Sataṃ* (“100”) and *sahassaṃ* (“1,000”) stand in apposition with another noun (the counted thing) in the same case¹⁰⁷ or with genitive nouns and belong, as substantive nouns, themselves to the neuter gender (e.g. *sataṃ nikkhaṃ* – “100 cold coins”); *sahassaṃ*, in combination with other numerals, sometimes inflects like an adjective (e.g. *satasahassīyo gāvo* – “many hundreds of thousands of cows,” Sn: 24 [Sn 310]; Oberlies: 308; Warder, 1963/2001: 117). (e) The numerals above 100 form somewhat flexibly, so that compounds are also frequently encountered in which *sataṃ* stands as final member with the tens prefixed – the units come before the tens (e.g. *ekādasasataṃ* – “111”); higher numerals are usually copulative compounds

¹⁰⁵ See Table 5 in the “Tables” section below for a detailed list.

¹⁰⁶ See below.

¹⁰⁷ There is no agreement of gender but case and number (sing. and pl.).

(Ānandajoti, 2016: 8; Oberlies: 309; Perniola, 1997: 63). **(f)** It is also possible that the counted thing and the numeral form a compound (e.g. *vassasataṃ* – “100 years”; Oberlies: 308). **(g)** Numerals higher than 100 and 1,000 may take shape with the addition of *atireka* (“surplus,” “exceeding”) *adhika/samādhika* (“exceeding”), *paro* (“more than”) or *uttara/uttariṃ* (“higher,” “further,” “over”); some examples in the following:

- *Adhika: ekādhikaṃ sataṃ* (“101”); *aṭṭhārasādhikaṃ sataṃ* (“118”).
- *Atireka: atirekatiratte* (“exceeding three nights”).
- *Paro: parosahassaṇca* (“more than 1,000”).
- *Uttariṃ: tīṇi gāthāsataṇettha, asīti tīṇi cuttariṃ* (“three hundred verses [and] eighty-three over in here [i.e. ‘383’],” Ap I: 298).

(a) Constructions with the word *matta* (“as far as the measure goes,” “consisting of” etc.) are frequent (e.g. *pañcamattāni brāhmaṇasatāni* – “500 Brahmins,” DN I: 52 [DN 4]; Oberlies, 2019: 309). **(b)** The higher numeral may also be placed as the initial + the smaller one, either with or without copulative particle *ca* (“and”; e.g. *sataṃ eko ca* – “101”; Oberlies: 309; Perniola, 1997: 63). **(c)** The numeral may also be expressed with two words in apposition; “200” etc. are usually written like that and 2,000 and 20,000 are constructed in the same way (e.g. *ekaṃ sataṃ* – “100”; *dve sataṃ* – “200”; Oberlies: 309). **(d)** Again, numerals 50, 150, 500, 1,500 etc. are made up with the word *aḍḍha* (“half”) + the word standing for the next higher order numeral (e.g. *aḍḍhateyyasataṃ* – “half of the third hundred [i.e. ‘250’]”), though 150 and 1,500 are *diyaḍḍhasataṃ* and *diyaḍḍhasahassaṃ* respectively (Perniola: 64).

(a) The numeral *eka* is declined in the masculine, feminine and neuter singular, following the same declensional paradigm as the demonstrative pronoun *ta* (nom.: *so, sā, taṃ*). **(b)** In the plural it means “some” (Pd I: 8; Perniola, 1997: 63–4). **(c)** Numerals *dvi* (“two”) and those from *pañca* (“five”) up to *aṭṭhārasa* (“18”) have no gender distinction; i.e. they have the same declension, irrespective of the gender of the word which they determine, or are, excepting *pañca*, used in an undeclined form (for the latter point e.g. *dvattiṃsa mahāpurisalakkhaṇāni*; cf. Kacc 134; Collins, 2006:

71; Duroiselle, 1906/1997: 63–4; Oberlies, 2019: 296–7; Perniola: 64). **(d)** Numerals *ti* (“three”) and *catu* (“four”) have declensions in the masculine, feminine and neuter (Kacc 133; Duroiselle: 62). **(e)** From *dvi* up to *aṭṭhārasa*, the cardinals are declined only in the plural number, following the declensional paradigm of *pañca*. **(f)** The numeral *koṭi* is feminine (Buddhadatta, 1937/1997: 66). **(g)** Numerals ending in (Perniola: 65):

- *ti* take the singular declensions like the feminine with the nominative in *i* (e.g. *jāti*);
- *ā* take the singular declensions like the feminine with the nominative in *ā* (e.g. *kaññā*);
- *aṃ* take the singular and plural like neuter nouns with the nominative in *aṃ* (e.g. *rūpaṃ*);
- *a* are usually uninflected.

Usage. **(a)** Cardinal numerals are used for counting objects, expressing numerical quantity (e.g. “one, two, three” etc.; Perniola, 1997: 59). **(b)** Numerals from one to 18 are adjectives (e.g. *eko puriso* – “one man”), “unless they inflect as neuters or feminines (sing.) in analogy with *vīsa-* and *vīsam*” (Oberlies, 2019: 296), and those from 20 onwards are all substantive nouns (e.g. *bhikkhūnaṃ koṭisataṃ* – “millions of bhikkhus”; Oberlies: 296; Perniola: 64). **(c)** In the singular, *eka* can be translated with the indefinite article “a” or with “a certain”; standing as an adjective, it can – among other things – have the meaning of “alone” (Collins, 2006: 70). **(d)** In the plural, as mentioned above, *eka* has the meaning of “some” (e.g. *eke purisā* – “some men”). **(e)** Cardinal numbers are oftentimes used as ordinals, especially in compounds (Collins: 74; cf. Duroiselle, 1906/1997: 66) and ordinals above 1,000 are used in the same way as cardinals (Collins: 74).

Ordinal Numerals¹⁰⁸

Formation. **(a)** The first ordinal number is formed thus: stem *putha* + *ama* → *paṭhama*¹⁰⁹ (“first”). **(b)** Ordinals two and three take the affix

¹⁰⁸ See Table 5 in the “Tables” section for a detailed list.

¹⁰⁹ Change is per Kacc 666. Perniola (1997: 67), however, breaks it up like this:

tiya for their formation (e.g. *dutiya* – “second”). **(c)** *dvi* (“two”) is capable of changing into *bā* before *dasa* or *vīsati* (“twenty”; Kacc 380). **(d)** Four and six form their ordinals with the affix *tha* (e.g. *chaṭṭha* – “sixth”). **(e)** Sometimes, *cha* → *sa* in the formation of ordinal numerals (e.g. *saṭṭho* – “sixth”; Kacc 374) – it may also change into *so* when the word *dasa* (“ten”) follows (Kacc 376). **(f)** From five upwards, ordinals are fashioned from the stem of the cardinals by means of the affix *ama* (e.g. *pañcama* – “fifth”; Kacc 373; Oberlies, 2019: 310–1; Perniola, 1997: 67). **(g)** Duroiselle (1906/1997: 65) mentions two forms for the ordinals of five, six and seven (i.e. *pañcatha/pañcama*; *caṭṭha/chaṭṭhama*; *satta/sattama* respectively). **(h)** Those ordinals ending in *ti* form by means of the *ma* endings. **(i)** 60 and 80 as well as 100 and 1,000 take the affix *tama*, though for 100 and 1,000 *satima* and *sahassima* also exist. **(j)** The feminine of ordinal numerals one, two and three end in *ā* and all others in *ī* (Perniola: 67–8). **(k)** An affix *ī* can be added after cardinals from ten upwards to make ordinals (e.g. *dasī* – “the tenth”; cf. Kacc 375). **(l)** There are numerous other rules for potential changes; however, it is deemed most potent to learn them from the dictionaries and the listing of Table 5 in the “Tables” section.

Usage. **(a)** Ordinal numbers are used to express sequential ordering (first, second, third etc.; Perniola, 1997: 66). **(b)** They are adjectives used in the same way as others (Perniola: 67; Collins, 2006: 73), declined as such in all three genders. **(c)** To repeat verbatim what was said in the section on the usage of cardinal numerals: “Cardinal numbers are oftentimes used as ordinals, especially in compounds (Collins: 74; cf. Duroiselle, 1906/1997: 66) and ordinals above 1,000 are used in the same way as cardinals (Collins: 74).”

Distributive Numerals

Formation and Usage. **(a)** Distributive numerals are expressed by repeating cardinal or ordinal numerals twice (e.g. *aṭṭha aṭṭha there amacce ca pesayi* – “He sent [for] eight elders and ministers each”). **(b)** Suffix *so*,

prefix *pa* (“in front”) + *ṭhama* → *paṭhama*.

when added to the cardinal numbers, articulates the selfsame idea (e.g. *ekekaso* – “one by one”; Perniola, 1997: 68).

Fractional Numerals

Formation and Usage. (a) Ordinal numbers take on a sense of partitioning with words as these: *bhāgo* (“a portion”), *kalā* (“a fraction”), *aṃso* (“a part”), *koṭṭhāso* (“a share”; e.g. *soḷasi kalā* – “a fraction of a sixteenth”). (b) To express “one half,” the words *aḍḍha/upaḍḍha* are appended to the next higher numeral (the word *pāda* means “one fourth”) – “one and a half” writes: *diyāḍḍha* (Oberlies, 2019: 316; Perniola, 1997: 68).

Multiplicative and Numeral Substantives

Formation and Usage. There are a few ways to express how many times something happens and to communicate the sense of “fold,” “ways,” “kinds” (Duroiselle, 1906/1997: 66–7; Perniola, 1997: 68–9).

- The accusative neuter of the ordinal numbers (e.g. *paṭhamam* – “for the first time,” “first”).
- *Sakiṃ* (“once”).
- Suffix *kkhattum* appended to cardinal stems expresses the sense of “times” (e.g. *tikkhattum* – “three times”) – it is the aforementioned *sakiṃ* transformed (Kacc 646).
- The word *vāra* (“turn,” “occasion”) in addition to cardinals and ordinals (e.g. *cattāro vārā* – “four turns”).
- Suffix *dhā* attached to cardinal stems expresses the sense of “fold,” “ways,” “kinds” (e.g. *sattadhā* – “sevenfold”; Kacc 397).
- The word *guṇa* is oftentimes used like the above *dhā*. In the sense of “times,” it usually takes the neuter in *aṃ* (e.g. *dasaguṇam* – “ten times”).
- Affixes *ka* and *ya* form collective nouns and adjectives (e.g. *catukka* – “consisting of four”).

Verbs (*ākhyātāni*)

Kinds of Verbs

Primary Verbs

Present (*vattamānakālo*)

1. Indicative (*vattamānā*).
2. Imperative/benedictive (*pañcamī*).
3. Optative/potential (*sattamī*).
4. Present participle.

Past (*atītakālo*)

5. Aorist (*ajjatanī*).
 - i. Root aorist.
 - ii. *a*-aorist.
 - iii. *s*-aorist.
 - iv. *is*-aorist.
6. Imperfect (*hīyattanī*).
7. Perfect (*parokkhā*).
8. Past participle.

Future (*bhavissatikālo*)

9. Future indicative (*bhavissanti*).
10. Conditional (*kālātipatti*).
11. Future participle.

Secondary Verbs

12. Causative (*kārita*).
13. Desiderative (*tumicchaththa*).
14. Intensive (aka frequentative).¹¹⁰

¹¹⁰ This kind is not classified by native grammarians to be a distinct class of conjugation; however, due to its distinct features, it was deemed worthy of separate note (Warder, 1963/2001: 331).

15. Denominative (*dhāturūpakasaddo*).¹¹¹

Indeclinable Forms

16. Absolute (*tvādiyantapadaṃ*).
17. Infinitive (*tumantapadaṃ*).

General Characteristics

A verb is a word in a sentence that expresses the action of the subject (e.g. *so gacchati* – “He goes”), “that which describes fully”; i.e. a finite verb; Deokar, 2008: 245; cf. Yindee, 2018: 69). It has been further defined thus (*Kaccāyana-vaṇṇanā* as cited and translated by Deokar: 246):

There, that which expresses an action is an *ākhyāta*, or a *kiriyaṇapada* (a finite verb). It expresses time, syntactic relations between a noun and a verb, person, and action and it is characterized by an action ... As it is said thus: that which has three tenses, and three *kāraka* [agent] relations, that which is without three genders, and has two numbers, that is called and *ākhyāta*, finite verb.

General Formation

The formation of verbs in the Pāli language is brought about by conjoining or the application of two or more of the following elements or principles in the given sequence:

- Augment (*akārāgamo*).
- Prefix (*upasaggo* or *upasāraṃ*).
- Reduplication (*abbhāsaṃ*).
- Root (*dhātu*).
- Root affix (*dhātupaccayo* or *vikaraṇapaccayo*) to form stems expressing:
 - ❖ Active voice (*kattuvācako*).
 - ❖ Passive voice (*kammavācako*).
 - ❖ Stative passive voice (*bhāvavācako*).

¹¹¹ Some include the passive (*kammakārako*) here (Nwe Soe, 2016: 208).

- Interfix (*āgamo*).
- *Kita* affix (*kitapaccayo*).
- Personal or conjugational ending or suffix (*paccayo* or *vibhatti*), expressing:
 - ❖ Person.
 - ❖ Number.
 - ❖ Tense.
 - ❖ Aspect.
 - ❖ Mood.
 - ❖ Further indications of voice (i.e. active and middle voice).

(a) For example, the verb *ajjhāvasati* consists of the following elements: *adhi* (*upasaggo*) + *ā* (*upasaggo*) + *√vas* + *a* (*dhātupaccayo*; first class active base root affix) form the stem to which *ti* (*vibhatti*; third person singular active voice present indicative suffix) is appended, finally → *ajjhāvasati* (“He inhabits,” “He settles down”).¹¹² (b) The augment *a* is often used in the formation of the aorist tense, imperfect tense and conditional mood (e.g. *a* [*akārāgamo*] + *√gamu* + *ā* [third person singular active voice aorist indicative suffix] → *agamā* – “He went”; Kacc 519); (c) the reduplication of the root may occur in the making of the active base/stem, perfect tense, desiderative, intensive and denominative (cf. Kacc, 434, 458).¹¹³ (d) The participles, absolutives and infinitives (the first mentioned decline but the last-mentioned two not, being “indeclinables”) are not formed by means of any conjugational endings but with the aid of some *kita* affixes appended directly to roots (e.g. *√su* + *ta* [*kitapaccayo*] → *sota* [past passive participle] + *nā* [*ena*; instrumental suffix] → *sotena* – “with the ear,” “with the stream”; Collins, 2006: 102; Thitzana, 2016: 747).¹¹⁴ (e) Pāli follows the convention that it – *generally* – forms the present indicative, the imperative and the optative from the active base/stem and everything

¹¹² The other elements are explained in the respective sections following.

¹¹³ See the respective sections below for details.

¹¹⁴ See chapter “*Kita* and *Taddhita* Affixes” and Table 6 in the “Tables” section.

else from the root (Collins: 79). **(f)** The rules of sandhi and morphology regularly hold, as the examples given adequately show.

(a) The “most fundamental” grammatical unit of analysis (expressing the core meaning) is the root (*dhātu*), from which words (verbs as well as nouns) are built, indicative of an action (*kiriya*) or a state (*bhāva*; e.g. *√vā* – “going and spreading of odor,” as in *nibbāti*¹¹⁵ – “He gets cool,” “He attains *nibbāna*”; Kacc 457; Bodhirasa, 2021; Collins, 2006: 12, 15; Perniola, 1997: 135; Silānanda, 2001: xvi). **(b)** One traditional explanation of the word *dhātu* runs as follows, differentiating them from prefixes: “‘*Dhātu*’: In what sense *dhātu*? ‘*Dhātu*’: It bears both its own meaning and – regarding a connection with the distinction of meaning – that of others; ‘*dhātu*’: It holds a difference in meaning, bound to the difference in meaning with whatever by necessity different in meaning prefix (*upasaggēna*) of the twenty prefixes [...]” (Sadd I: 2; cf. Silānanda: vii–x).¹¹⁶ **(c)** A stem (*liṅgaṃ*), verbal or nominal, is a linguistic unit apart from (or leaving out) roots, affixes (incl. suffixes) and personal endings and thereby represents an uninflected verbal or nominal stem¹¹⁷ (Rūp: 4; cf. Deokar, 2008: 165; cf. Perniola: 70). **(d)** Roots and stems are not proper words and incapable of functioning independently in a sentence (Collins: 12). **(e)** To create an inflected verb, personal endings are then applied to verbal stems (Palistudies, 2018a) or directly to roots (e.g. Kacc 434; Deokar: 164).

(a) As mentioned above, the rules of sandhi and morphology are regularly applied in the formation of verbal stems (Perniola, 1997: 7; Thitzana, 2016:

¹¹⁵ The word breaks up as follows: *ni* (*upasaggo*) + *√vā* + *a* (first class active base root affix) + *ti* (third person singular active voice present indicative suffix).

¹¹⁶ *[D]hātūti kenaṭṭhena dhātu? sakatthampi dhāretīti dhātu, atthātisayogato paratthampi dhāretīti dhātu, vīsatiyā upasaggesu yena kenaci upasaggēna atthavisesakāraṇena paṭibaddhā atthavisesampi dhāretīti dhātu [...].*

¹¹⁷ *Dhātuppaccayavibhattivajjitamatthavaṃ liṅgaṃ.* Stems are distinguished from bases insofar as that they only take inflectional suffixes providing finish to a word. Bases, on the other hand, are more global in scope and may include those inflectional suffixes but also comprise any other derivational affixes not finalizing a word (e.g. passive affixes, which require the addition of inflectional suffixes to form a word expressive of full meaning).

644). **(b)** If you feel inclined to do so, please utilize the material found above in the chapters “Sandhi” and “Morphology” to find out about the exact nature of potential changes that may occur during the formation processes of verbs (and the words of other classes). **(c)** There is great variance as to the elements used in the formation process and, as indicated above, not all of them must be employed simultaneously for each and every word, as can also be readily understood from the elaborations to follow.

Grammatical Voice

In Pāli, we find a traditional division into three voices (*vācakā*),¹¹⁸ being verbal stems formed with certain root affixes attached to roots:¹¹⁹

1. Active (*kattuvācako*; lit. “speech of the agent”).
2. Passive (*kammavācako*; lit. “speech of the object”).
3. Stative passive (*bhāvavācako*; lit. “speech of the state”; cf. Kacc 453–454, 456; cf. Bodhiprasiddhinand, 2016: 85; Collins, 2006: 77; cf. Thitzana, 2016: 612).¹²⁰

(a) Most importantly to note, it is the stem which indicates if a verb is active or passive (Oberlies, 2019: 555; Warder, 1963/2001: 51) and not the two sets of personal voice markers (discussed below). **(b)** Pāli also features the middle voice (*attanopadaṃ* – “middle voice marker”; see just below “Middle Voice Markers”), which is not expressed by any stem but by the so-called “latter six personal suffixes” (*parāṇi cha padāni*; e.g. *e*, *se*,

¹¹⁸ The grammatical voice of a sentence verb indicates the subject’s function in relation to it (Deokar, 2008: 254; Yindee, 2018: 340, 390), telling, for example, if the subject acts (active voice), is acted upon (passive voice), acts and simultaneously is acted upon (middle voice) or if a state or condition is expressed (stative passive voice).

¹¹⁹ To which again the regular personal endings are appended to form the eventual finite verbs (see below the section “Personal Voice Markers” for details; for more about the voice-formative root affixes, see under “Active Base/Stem” and “Passive and Passive Stem”).

¹²⁰ The stative passive is only rarely employed (Thitzana, 2016: 612, 629).

te) of each class.¹²¹ The part of them termed “[personal voice] markers” cannot be distinguished from the personal suffixes in writing, being merely conceptual abstractions from them (see below; cf. Yindee, 2018: 76). (c) In what follows, a brief account of the most salient features of the voices and personal voice markers, before detailing the formation of the active and passive stems as well as the tenses and moods in general.

Active Voice

The subject¹²² (S) in an active sentence does a particular thing, expressed by a verb in the active voice, that impacts an object (O) or patient (P) other than itself (e.g. *√paca* + *a* [first class active base root affix] + *ti* [third person singular active voice present indicative suffix] → *pacati* – “He cooks [something other than himself],” as in *puriso* [S] *odanaṃ* [O or P] *pacati* [V] – “The man [S] cooks [V] the rice [O]”; Thitzana, 2016: 613; cf. Yindee, 2018: 340–1).

Passive Voice

(a) The object in an active sentence becomes the subject in a passive one – i.e. the subject undergoes the action or has its state changed – and the agent¹²³ (A) is put in the instrumental case (e.g. *√disi* + *ya* [passive voice affix] + *te* [third person singular middle voice present indicative suffix] → *desiyati*¹²⁴ – “He is taught [by himself or an outside agent],” as in *buddhena* [A] *dhammo* [S] *desiyati* [V] – “The *dhamma* is taught by the Buddha”; Kacc 440; cf. Thitzana, 2016: 614–5; cf. Yindee, 2018: 341). (b) The personal endings are mainly the *attanopadaṃ* or reversed *attanopadaṃ* suffixes; i.e. *attanopadaṃ* suffixes in the “dress” of the *parassapadaṃ* forms – genuine *parassapadaṃ* forms are incapable of functioning passively (see below; Thitzana: 614).

¹²¹ A present middle participle also exists (see section “Present Participle” and Table 6 in the “Tables” section for more details).

¹²² A person or thing about which the statement of a sentence is concerned.

¹²³ The cause or initiator of an action.

¹²⁴ For the change into the active voice suffix (i.e. *te* → *ti*), see below. The sentence remains passive, despite of its presence.

Stative Passive Voice

(a) Passive voice affix *ya* is used to express the stative passive, with or without *i*-interfix (Kacc 440; Thitzana, 2016: 630). (b) The stative passive reveals experience, status or general condition (e.g. *√thā + ya* [passive voice affix] + *te* [third person singular middle voice present indicative suffix] → *ṭhīyate* – “act of standing”; Kacc 440, 453; Thitzana: 615; cf. Yindee, 2018: 343). (c) The subject may be either in the instrumental or in the genitive case (e.g. *devadattena bhūyate* – “Devadatta’s being”; cf. Kacc 556; Thitzana: 616). (d) Only the third person singular is applicable for this voice (Rūp: 129; Thitzana: 615–6).

Personal Voice Markers

(a) To express all the nuances of voice as approximating the usage in the English language, the personal endings have to be applied to the stems, the former are expressive of either of two so-called markers (sing. *padam*; Yindee, 2018: 74): (i) active voice markers (sing. *parassapadam*; lit. “marker for another”) and (ii) middle voice markers (sing. *attanopadam*; lit. “marker for oneself”). (b) As mentioned above, these markers are merely conceptual abstractions from the personal endings, which cannot be distinguished from them in writing; the latter express three things in total (see also above under “General Formation”; Kacc 407; Deokar, 2008: 198):

- Person.
- Number.
- Voice (explained in this section).

(a) As a rule, it is stated that active voice suffixes are appended only to active stems (Kacc 456; cf. Thitzana, 2016: 642; cf. Yindee, 2018: 74, 267) and that middle voice suffixes are capable of being attached to all three stems expressing voice: both active and passive stems as well as to stative passive stems (Kacc 453–454; Thitzana: 633; cf. Yindee: 74, 267). (b) As previously explained, apparent active voice suffixes, having been tacked to passive stems, are reversed *attanopadam* forms and not genuine active

voice suffixes.¹²⁵ (c) For instance, *karīyati* (“It is done”) is a verb form where a third person singular active voice suffix (i.e. *ti*) is used passively as a reversed *attanopadaṃ* suffix, breaking actually up as follows with the corresponding *attanopadaṃ* suffix *te*: $\sqrt{kara} + ya + te$ (cf. Kacc 442, 518; cf. Oberlies, 2019: 320; cf. Perniola, 1997: 341; Thitzana: 607, 633, 678). (d) To form the passive, the reversed *attanopadaṃ* suffixes are more common than the genuine ones (Collins, 2006: 93).

Active Voice Markers. (a) These endings are the ordinarily employed personal endings and said to be the “former six personal suffixes” (*pubbakāni cha padāni*) of every verbal tense¹²⁶ (e.g. $\sqrt{gamu} + a$ [first class active base root affix] + *mi* [first person singular active voice present indicative suffix] → *gacchāmi* – “I go”; Kacc 406; Deokar, 2008: 198–9; Warder, 1963/2001: 314). (b) The subject does a particular thing that impacts something – an object [O] or patient [P] – other than itself, the action or change of state thus passing “to another” (*parassa*; e.g. *buddho* [S] *dhammaṃ* [O or P] *desesi* [V] – “The Buddha [S] preached [V] the *dhamma* [P],” Bv: 44; Collins, 2006: 78). (c) In active sentences, the subject must be in the nominative with the object in the accusative and the verb should agree with the subject in person and number (Thitzana, 2016: 613).

Middle Voice Markers. (a) Traditionally, the middle voice endings are called the “latter six personal suffixes”¹²⁷ (*parāni cha padāni*; e.g. $\sqrt{mana} + ya$ [third class active base root affix] + *te* [third person singular middle voice present indicative suffix] → *maññate* – “I know [myself]”; Kacc 407, 454; Deokar, 2008: 198). (b) Middle voice markers are quite rare in prose but more frequent in verse (Duroiselle, 1906/1997: 80; cf. Oberlies, 2019: 318; Warder, 1963/2001: 314–5). (c) The middle voice is, in principle, used for cases in which the subject is both the actor and patient of a sentence, with the action reverting to or being “for oneself” (*attano*; Collins, 2006:

¹²⁵ “It’s a form of historical simplification which is common in all inflected languages” (Levman, personal communication, August 28, 2020).

¹²⁶ In this grammar, given in the left column of Table 6 in the “Tables” section.

¹²⁷ In this grammar, given in the right column of Table 6 in the “Tables” section.

78, Perniola, 1997: 339) but practically rarely differs in meaning from that which is expressed by the active voice (Oberlies: 318). **(d)** It is worthwhile to quote Duroiselle (p. 80) in this regard:

It must here be remarked that the Reflective Voice [or middle voice] has lost very much of its importance, and that the distinction between Active and Reflective has been almost if not altogether effaced, and that the choice between the Active or Reflective is mostly determined now by metrical exigencies.

(e) Thus, we must understand that the application of the middle voice, in its actual meaning, becomes blurred with the active voice and appears to be used only to confer an elevated or archaic meaning or to suit the meter. **(f)** However, it may still retain the reflective sense proper (Gair & Karunatilake, 1998: 154; Perniola: 339). **(g)** The passive form of the middle voice is extremely rare (Warder: 316).

Person, Number, Tense and Mood¹²⁸

(a) As for most nouns, it is explained that there are three persons (*purisā*) for verbs in the Pāḷi language: first (*paṭhamapuriso*), second (*majjhimapuriso*) and third (*uttamapuriso*; Kacc 408).¹²⁹ **(b)** When there are two subjects in a sentence, the last one determines the person for the corresponding verbs (Kacc 409). **(c)** There are two numbers in Pāḷi: singular (*ekavacanam*) and plural (*bahuvacanam*); three tenses: present, past and future; four moods: indicative, imperative, optative and conditional (informally also called a tense) and four systems of secondary

¹²⁸ The respective pers. endings are given in Table 6 in the “Tables” section.

¹²⁹ It is, in this connection, deemed pertinent to repeat what was said in the chapter “Nouns (*nāmāni*)” (f.n. 75): “This is the schema of the traditional Pāḷi grammarians – first and third persons given therein are the exact opposites in English (e.g. English first persons ‘I’ and ‘we’ are each classed as third person [*uttamapuriso*] in Pāḷi, and English third persons ‘he/she/it’ and ‘they’ each correspond to the first person [*paṭhamapuriso*] in Pāḷi); however, to forestall confusion, occurrences of grammatical numbers in Pāḷi – within the bounds of the present grammar – correspond [...] to English usage.”

verbs: causative, desiderative, intensive, denominative – these are neither moods nor tenses and can assume all moods, tenses and voices capable of being expressed by the primary verbs (Collins, 2006: 79; Nwe Soe, 2016; Oberlies, 2019: 321; Palistudies, 2018a). **(d)** Note that stems in *a* are more common than any other (Geiger, 1916/1956: 159; Warder, 1963/2001: 8).

Active Base/Stem

Formation. (a) According to Kaccāyana’s grammar and *Saddanīti* (Sadd I: 2), there are eight different classes (sing. *gaṇo*) of roots and thereby ways to form the active base/stem from roots,¹³⁰ although Buddhappiya’s *Padarūpasiddhi* considers the sixth class as part of the fifth (Sīlānanda, 2001: ix) – presented here is the eightfold scheme. **(b)** All roots in the Pāli language have typical affixes (sing. *paccayo* or *vikaraṇaṃ*) placed between themselves and the personal endings or conjugations¹³¹ – they consist of between one and three (or even more) for each class,¹³² in which case the meaning of each stem from the same root differs, in most instances, from the original meaning of the root itself (Duroiselle, 1906/1997: 85; Thitzana, 2016: 636; Sīlānanda: viii–ix). **(c)** These classes are named according to an example root from that class (e.g. *√bhū* is of the first class and is the first element of the name for that class: *bhūvādigaṇo* – “*bhū*-etc. class,” to give a literal translation). **(d)** Altogether there are more than 1,700 roots, each categorized under one of the eight classes and ways to form the active base/stem, prepared for convenient access and identification by Ā. Bodhirasa (2021). **(e)** As stated above: “Pāli follows the convention that it – *generally* – forms the present indicative, the imperative and the optative from the active stem and everything else from the root” (Collins, 2006: 79). **(f)** In what follows, a listing and explanation of the eight classes (Duroiselle: 81–5).

¹³⁰ The sundry conjugations of the present indicative, imperative etc. are appended to this base or stem; see further below the detailed exposition on each class for exceptions.

¹³¹ Exceptions exist; see the different classes for details.

¹³² See below for the individual affixes.

1. Class (*bhūvādigāṇo*; Kacc 445):
 - Roots ending in a consonant simply add *a* (e.g. $\sqrt{\text{labha}} + a \rightarrow \text{labha}$; $\sqrt{\text{rakḥa}} + a \rightarrow \text{rakḥa}$). To this division belong those roots which, ending in a consonant preceded by *i* or *u*, sometimes do and sometimes do not strengthen the vowel (e.g. $\sqrt{\text{gupa}} + a \rightarrow \text{gopa}$).
 - Affix *a* \rightarrow \emptyset or *e* [occasionally] (e.g. $\sqrt{\text{vasa}} + a + \text{mi} \rightarrow \text{vademi}$; Kacc 510).
 - The personal endings of the tenses are added directly to the root (e.g. $\sqrt{\text{hana}} + \text{ti} \rightarrow \text{hanti}$).
 - Roots of this division ending in *i*, *ī* or *u*, *ū*, which, before the conjugational sign *a*, are respectively changed to *ay* and *av* (e.g. $\sqrt{\text{nī}} + a \rightarrow \text{naya}$).
 - Reduplication of root (e.g. $\sqrt{\text{dhā}} + \text{da} \rightarrow \text{dadhā}$).
2. Class (*rudhādigāṇo*; Kacc 446): It is formed by inserting the *niggahītaṃ* (*ṃ*) before the last consonant of the root and then adding *a*, as in the first conjugation (e.g. $\sqrt{\text{muca}} \rightarrow \text{muñca}$). The usual rules of sandhi apply in respect to the *niggahītaṃ*.
3. Class (*divādigāṇo*; Kacc 447): Generally added directly to the root is *ya* (e.g. $\sqrt{\text{yudha}} + \text{ya} \rightarrow \text{yujjha}$; $\sqrt{\text{jhā}} + \text{ya} \rightarrow \text{jhāya}$) – the rules for the assimilation of *ya* are regularly applied (cf. Kacc 444).
4. Class (*svādigāṇo*; Kacc 448): It is formed by appending *ṇu*, *ṇā*, *uṇā* to roots ending in a vowel and *uṇu* or *uṇā* to roots ending in a consonant (e.g. $\sqrt{\text{su}} + \text{ṇā} + \text{ti} \rightarrow \text{suṇāti}$ – “He listens”).
 - The *u* of *ṇu* and *uṇu* may be strengthened to *o*.
 - This *u* or *o*, before a personal ending beginning with a vowel, can be changed to *va*.
 - The long *ā* of *ṇā* and *uṇā* is retained before the personal endings of the present indicative and of the imperative, except the third person plural. Occasionally, however, it is found shortened.

- In a few cases, the retroflex *ṇ* is delingualized and changed to the dental nasal *n*.
5. Class (*kiyāḍigaṇo*; Kacc 449): It is formed by the addition of *nā* to the root, which as a rule ends in a vowel.
 - If the final vowel of the root is long, it is shortened before *nā*.
 - *nā* is sometimes lingualized and becomes retroflex *ṇā*.
 - The long *ā* of *nā* is retained in all the persons of the present indicative and imperative, except in the third person plural. The short form *na* is oftentimes also encountered.
 - Affix *nā* → Ø or *ya* [occasionally] / *√ñā* __ (Kacc 509).
 6. Class (*gahāḍigaṇo*; Kacc 450): It is formed by the addition of *ppa* or *nhā* affixes to roots of this class (e.g. *√gaha* + *ppa* + *ti* → *gheppati*).
 7. Class (*tanāḍigaṇo*; Kacc 451): **(a)** It is formed by adding *o* or *yirā* to the root – the *o* generally is the strengthened form of *u*, which before an ending beginning with a vowel is changed to *va*. **(b)** There are just a remarkably few formations from this kind of roots, and *√kara* forms very irregular. **(c)** Affix *o* → *u* [occasionally] / *√kara* __ (e.g. *√kara* + *o* + *ti* → *karoti* – “He does”; Kacc 511).
 8. Class (*curāḍigaṇo*; Kacc 452):¹³³ It is formed by adding to the root *e* or *aya*, which by contraction may be replaced by *e* – the forms in *e* are more commonly met than those in *aya* (e.g. *√bandha* + *e* or *aya* → *bandhe* or *bandhaya*).
 - When the radical vowel is *u*, it is changed to *o* in the process of increase (*vuddhi*), provided it is not followed by a conjunct consonant (e.g. *√cura* + *aya* → *core* or *coraya*).
 - Radical *a* (if followed by a single consonant) is generally lengthened, but in some cases, it remains short.

¹³³ Warder (1963/2001: 79) states: “Sometimes it is not easy to decide whether to class a verb as an independent seventh conjugation [our eighth class] root or as the causative form [*aya*] of some other verb of perhaps widely divergent meaning.”

(a) The present indicative is obtained by adding the primary personal endings (both active and middle) to the mentioned active stem – they indicate tense, person, number, mood and, again, voice. (b) The imperative is obtained by adding the imperative personal endings to the active stem. (c) Before applying the imperative ending *hi*, the *a* of the active stem is lengthened and sometimes the ending is elided altogether (Kacc 479). (d) All verbs formed by means of the eighth class root affixes take endings in *hi* as well as some other forms (cf. Warder, 1963/2001: 34–5). (e) The optative is formed by inserting one of three affixes (i.e. *eyyā*, *i* or *ya*) between the active stem and either the primary or secondary personal endings. (f) However, due to sandhi procedures and the occurrence of several irregular forms, many grammars treat it separately, as a paradigm on its own.

Usage. To reiterate, for ease of reference, what is written in the section “Active Voice”: “The subject (S) in an active sentence does a particular thing, expressed by a verb in the active voice, that impacts an object (O) or patient (P) other than itself (e.g. $\sqrt{paca} + a$ [first class active base root affix] + *ti* [third person singular active voice present indicative suffix] → *pacati* – ‘He cooks [something other than himself],’ as in *puriso* [S] *odanaṃ* [O or P] *pacati* [V] – ‘The man [S] cooks [V] the rice [O]’; Thitzana, 2016: 613; cf. Yindee, 2018: 340–1).”

Passive and Passive Stem¹³⁴

Formation. (a) The passive base/stem is formed by affixing *ya* to the root in its strengthened or unstrengthened grade – consequently added are the personal endings of the present tense (indicative, imperative, optative, both in the active and middle voices),¹³⁵ with or without interfix

¹³⁴ For the respective affixes, see Table 6 in the “Tables” section.

¹³⁵ As explained earlier, the endings of the active voice are actually reversed middle voice endings – they are not genuine active voice suffixes and thus retain a passive sense (see above the section “Grammatical Voice” for more details; cf. Kacc 518; Thitzana, 2016: 607).

vowel *i* and *ī* (e.g. for the optative: $\sqrt{ji} + ya + eyya + mi \rightarrow jīyeyyāmi$; Kacc 442, 502; Warder, 1963/2001: 51). **(b)** It forms also from the active base/stem but only with the mentioned connecting vowels (Perniola, 1997: 98). **(c)** An aorist passive is sometimes formed, simply by adding the aorist suffixes to the passive stem (e.g. *haññimsu*). **(d)** A present passive participle is built – in a similar fashion – by adding the affix *māna* to the passive stem (e.g. *desīyamāna*; Warder: 52).

(a) The agent of the sentence verb is put in the instrumental case, and the object¹³⁶ of the verb stands in the nominative, agreeing with the verb or predicate in person and number (e.g. *buddhena dhammo desīyate* – “The dhamma is taught by the Buddha”; Thitzana, 2016: 614). **(b)** In the case of the present passive participle, the object agrees in gender, number and case (e.g. *desīyamānaṃ dhammaṃ* – “the expounded dhamma,” Sp II: 22). **(c)** When an active sentence is transformed into the passive, the object becomes the subject¹³⁷ (e.g. *vanītā odanaṃ pacati* – “The woman cooks the rice” → *vanitāya odano pacīyati* – “The rice is cooked by the woman”; Buddhadatta, 1937/1997: 83). **(d)** When affix *ya* is appended to the root, it is undergoing and causing different permutations, exhibiting and engendering the following behavior (Kacc 441–443, 502; Ānandamaitreya, 1993/2012: 131; Duroiselle, 1906/1997: 110; Perniola, 1997: 98–101):

- Affix *ya* can be directly added to roots ending in a vowel.
 - ❖ Root *ā* → *ī* before *ya*, and *i*, *u* are lengthened to *ī*, *ū* (e.g. $\sqrt{dā} + ya \rightarrow dīya$).
 - ❖ Root *ī* and *ū* remain unaffected (e.g. $\sqrt{bhū} + ya \rightarrow bhūya$).
 - ❖ Few roots such as *ñā* and *khū* remain unaffected (e.g. $\sqrt{ñā} + ya \rightarrow ñāya$).
 - ❖ Sometimes, a long vowel before *ya* is shortened and the *y* doubled (e.g. \sqrt{ni} [“to lead”] + *ya* → *nīya* or *niyya*).
 - ❖ Initial *va* [of a root] → *vu* (e.g. $\sqrt{vaca} + ya \rightarrow vucca$).
 - ❖ Final *a* and *e* → *ī* (e.g. $\sqrt{pā} + ya \rightarrow pīya$).

¹³⁶ It is also the subject.

¹³⁷ It is also the *passive* object.

- When *ya* is joined to roots containing a double consonant, it is joined by means of the interfix letter *i* (subsequently lengthened to *ī*); however, it is also joined by means of *i* when a root ends in a consonant that does not generally reduplicate (*s*, *h* and *r*; e.g. *√puccha* + *ī* + *ya* → *pucchīya*).
- **(a)** When *ya* is appended directly to roots ending in a consonant, the *y* of *ya* becomes assimilated to the last consonant of the root according to the respective rules of assimilation (e.g. *√bhaṇa* [“to speak”] + *ya* → *bhaṇṇa*). **(b)** It is common to form the passive of roots ending in a consonant after *ā* by means of *ī* (e.g. *√pāja* + *ya* → *pājīyati*). **(c)** Affix *ya* may be added directly to some roots ending in a consonant without assimilation and without connecting vowel *ī* (e.g. *√lupa* [“to cut,” “elide”] + *ya* + *ti* → *lupyati* – “It is elided”).
- Affix *ya* is also added to the active base/stem by means of the insertion of interfix vowel *i*, usually lengthened but sometimes staying short (e.g. *u* + *√khipa* + *a* + *i* + *ya* + *ti* → *ukkipiyati* – “He was raised up”).

Usage. **(a)** To repeat verbatim, for easy reference, what is written in the section “Passive Voice” and explained in different words just above: “The object in an active sentence becomes the subject in a passive one – i.e. the subject undergoes the action or has its state changed – and the agent (A) is put in the instrumental case (e.g. *√disī* + *ya* [passive voice affix] + *te* [third person singular middle voice present indicative suffix] → *desīyati* – ‘He is taught [by himself or an outside agent],’ as in *buddhena* [A] *dhammo* [S] *desīyati* [V] – ‘The *dhamma* is taught by the Buddha” (Kacc 440; cf. Thitzana, 2016: 614–5; cf. Yindee, 2018: 341). [...] **(b)** The stative passive reveals experience, status or general condition (e.g. *√ṭhā* + *ya* [passive voice affix] + *te* → *ṭhīyate* – ‘act of standing’; Kacc 440, 453; Thitzana: 615; cf. Yindee: 343). **(c)** The subject may be either in the instrumental or in the genitive case (e.g. *devadattena bhūyate* – ‘Devadatta’s being’; cf. Kacc 556; Thitzana: 616). **(d)** Only the third person singular form is applicable for the stative passive voice (Rūp: 129; Thitzana: 615–6).” **(e)**

Both the participles and the infinitive can be used actively and passively (Buddhadatta, 1937/1997: 87; Duroiselle, 1906/1997: 105, 164).

Present Indicative

Formation. (a) The present indicative is formed from the active stem with the subsequent addition of the respective personal endings as furnished in Table 6 in the “Tables” section. (b) The vowel of the active stem before appending the present endings *hi*, *mi*, *ma* has to be lengthened (Kacc 478), as mentioned above. (c) The vowel of the active stem is dropped before personal endings beginning with or being a vowel (Duroiselle, 1906/1997: 86). (d) Verbs in the present indicative which have been constructed from past passive participles (the latter functioning therewith as a stem) are also encountered in the Pāḷi language (e.g. *laggati* ← *lagga*; Oberlies, 2019: 354–5).

Usage. (a) The indicative mood is used to make factual statements and proclamations, express opinions etc. (Collins, 2006: 168; Palistudies, 2018c). (b) At the beginning of a sentence, the present indicative may at times express interrogation (e.g. *socasi tvaṃ upāsaka?* – “Do you grieve, devotee?”). (c) The present expresses further the following senses (Collins: 81–3; Duroiselle, 1906/1997: 162; Hendriksen, 1944: 13, f.n. 2; Perniola, 1997: 349–50):

- Contemporary time (e.g. *evaṃ passaṃ, bhikkhave, sutavā ariyasāvako rūpasmiṃ nibbindati* – “Seeing thus, bhikkhus, the learned disciple is disgusted with regard to corporality,” MN I: 96 [MN 22]; Kacc 414).
- Present progressive (e.g. *gacchāmi kāsinaṃ puraṃ* – “I am going to the city of Kāsi,” MN I: 115 [MN 26]).
- Recent past, being close to the present time.
- Future, constructed with particles *yāva*, *pure*, *purā* (e.g. *yāvadeva anattāya, ñattaṃ bālassa jayati* – “Only for the fool’s non-gain does learning arise,” Dhṛp: 5, v. 72).
- (a) Future, denoting what is uncertain, certain or inevitable (e.g. *nirayaṃ nanu gacchāmi natthi me ettha saṃsayo* – “Certainly, I will

go to hell; I have no doubt [lit. ‘there is no doubt for me’]). **(b)**

It is also used for stating general truths (e.g. *sabbe maranti* – “All [beings] will die,” Jā-a III: 27 [commentary on Jā 317]).

- Future, constructed with *kadā*, *karahi* (“when?”, “at what time?”; e.g. *kadā bhante gacchati?* – “Venerable Sir, when does he go?”).
- Past, constructed with *nanu* (“certainly”), *na* (“not”) and *nu* (“indeed”) in reply to a question (e.g. *upāhanam kaṭam pālādhammika?* – *nanu karomi bhante!* – “Pālādhammika, did you produce the shoe?” – ‘Certainly, I did, venerable Sir’).
- Past as “historic present” (very common), recounting past events as actually happening (e.g. *bhayaṃ tadā na bhavati* – “At that time there was [lit. ‘is’] no fear,” Bv: 11).
- Hypothetical (e.g. *yassa rañño cakkavattissa dibbam cakkaratanaṃ osakkati thānā cavati, na dāni tena raññā ciraṃ jīvitabbaṃ hoti* – “When for the wheel-turning monarch the divine wheel-treasure draws back, retreats from its place, the monarch now has not long to live,” DN III: 24 [DN 26]).

Imperative

Formation. **(a)** The imperative is formed from the present indicative with the subsequent addition of the respective imperative suffixes as shown in Table 6 in the “Tables” section below. **(b)** The vowel of the present stem is dropped before personal endings beginning with or being a vowel. **(c)** Before the personal ending *hi*, the *a* of the preceding present stem is lengthened (Duroiselle, 1906/1997: 86).

Usage. **(a)** In the second person, the sense is usually that of commanding, whereas the third person in addition to addressing by title or name expresses polite invitation. **(b)** Verbs in the imperative often stand as the sentence initial.¹³⁸ **(c)** The imperative of *(t)thā* is used in the sense of “Let it be!”, “Never mind!” (e.g. *tiṭṭhatha tumhe* – “Don’t bother!”; Warder,

¹³⁸ Imperatives chiefly occur in main clauses (Oberlies, personal communication, October 30, 2020).

1963/2001: 35). **(d)** The imperative and optative “are syntactically often exchangeable” (Oberlies, 2019: 399). **(e)** It is further used in these senses (Buddhadatta, 1937/1997: 31; Collins, 2006: 84; Duroiselle, 1906/1997: 164; Warder: 35):

- Command (e.g. *tena hi, gaccha* – “Now then, go!”; Kacc 415).
- Prohibition.
- Advice/instruction (e.g. *kusalaṃ karotu* – “May he do good!”).
- Invitation (e.g. *etu vessantaro rājā, sivatṭṭhe pasāsatu* – “Come, king Vessantara, reign the kingdom of Sivi!”, Jā II: 227 [Jā 547]).
- Wish.
- Curse (e.g. *akkhayaṃ hotu te bhayaṃ* – “May your fear remain [lit. ‘be’] incessantly!”, SN I: 140 [SN 11.10]).
- Benediction, blessing (e.g. *vassasataṃ jīva* – “May you live a hundred years,” Jā-a I: 182 [commentary on Jā 78]).
- Entreaty (e.g. *bhante, bhagavā diṭṭhadhammasukhavihāraṃ anuyutto viharatu* – “Venerable Sir, let the Blessed One be given to a pleasant abiding in the here and now,” MN III: 95 [MN 128]).
- Reflection (e.g. *kinnu kho abhidhammaṃ suṇāmi udāhu vinayaṃ?* – “Should I listen to the *abhidhamma* or the *vinaya*?”).
- Hope (e.g. *imaṃ jivitā voropetuṃ samattho homi* – “May I be able to deprive him of life!”).

Optative/Potential¹³⁹

Formation. **(a)** The affixes forming the optative are added to the active base, and the vowel of the optative stem is dropped before personal endings beginning with or being a vowel (Duroiselle, 1906/1997: 86). **(b)** Some verbs form an optative in *yā*, likewise from the active base (e.g. *√vad* + *yā* → *vajjā* – “He would say”). **(c)** Double optative formations occasionally occur: To a base in *yā* are appended *eyya* and the respective personal endings (e.g. *dajjā* → *dajjeyyāti* – “He should give”; Collins, 2006: 85).

¹³⁹ The optative affixes are furnished in Table 6 in the “Tables” section below.

Usage. (a) The optative generally indicates hypothetical action (Gair & Karunatilake, 1998: 35). (b) When expressing condition, it is usually preceded by *ce*, *sace*, *yadi* (all meaning “if”). (c) This mood can best be translated into English using auxiliary verbs such as: “may,” “might,” “should” or “would” (Ānandamaitreya, 1993/2012: 14; Duroiselle, 1906/1997: 163). (d) As explained above, the imperative and optative “are syntactically often exchangeable (Oberlies, 2019: 399).” (e) The range of the optative’s meaning further encompasses (Collins, 2006: 85; Duroiselle: 163):

- Permission (e.g. *tvaṃ gaccheyyāsi* – “You may go!”; Kacc 416).
- Supposition (e.g. *sacepi vāto giriṃ vaheyya* – “Even if the wind should carry away the mountain”; *yathā* is occasionally also used in connection with this sense).
- Instruction.
- Wish (e.g. *ahaṃ imaṃ tumhākaṃ bhājetvā dadeyyaṃ* – “I would divide and give it to you”).
- Counterfactual assertions.¹⁴⁰
- Request.
- Invitation.
- Reflection.
- Hope.
- Exhortation.
- Authorization.
- Opportunity.
- Fitness.

¹⁴⁰ This denotes an action or happening that might have occurred on the condition that the necessary things had been supplied (Oberlies, personal communication, October 30, 2020, for this usage).

Aorist¹⁴¹

Formation. (a) The aorist is supposed to be formed from the root, but as a matter of fact, it is formed indifferently either from the root or the active stem (Duroiselle, 1906/1997: 93; Geiger, 1916/1956: 159). (b) The conditional and also the past are formed with an augment in the form of a prefixed *a*; in the case of the aorist, it is frequently left out (Kacc 519; Geiger: 190). When the aorist is disyllabic (with exceptions) or would be monosyllabic without the augment, to give one example for when it is applied, it is appended (e.g. *adā* – “He gave”; Oberlies, 2019: 473). (c) If a regular prefix is added to the root, the augment is inserted between prefix (if one is applied) and root (cf. Perniola, 1997: 72–3; Warder, 1963/2001: 23). (d) Sometimes, a special aorist stem is formed from the root (Warder: 23). (e) There are altogether four types:

1. Root aorist. Personal endings are added directly to the root and may take the augment *a* before the root (e.g. *a* + \sqrt{gama} + \bar{a} → *agamā*).
2. *a*- or stem aorist. (a) Affix *a* is placed between root and personal ending; i.e. the personal endings are formed from the active stem. (b) This type is ubiquitous – both with and without the augment – but occurs more frequently in prose than in poetry; in the latter case its employment or nonuse is determined by metrical exigencies (Duroiselle, 1906/1997: 95).
3. *s*- or sigmatic aorist. (a) The sigmatic aorist is formed by inserting *s* between the radical vowel or the vowel of the stem and the personal endings; i.e. it is inserted to join the aorist suffixes to the root or to the stem. (b) This interfix is usually added to roots ending in vowels but to some roots ending in consonants too, in which case assimilation to the consonant takes place (the rules of assimilation strictly apply). (c) It is appended with or without the augment *a* having been appended to the root. (d) This type of aorist is principally formed (exceptions apply) with the causative

¹⁴¹ For the respective conjugations, see Table 6 in the “Tables” section below.

verbs and the verbs formed by means of eighth class root affixes.

(e) The personal endings may be added directly to stems in *aya* (Duroiselle, 1906/1997: 93–7).

4. *is*-aorist. This type is formed by adding *is* between the root (undergoing strengthening) or the active stem and the personal ending (Perniola, 1997: 96).

Usage. **(a)** The aorist is the principal past tense in Pāḷi and profusely applied (Duroiselle, 1906/1997: 162). **(b)** Aorist sentences oftentimes contain indicators of time and place (e.g. *tadā* – “then”; Hendriksen, 1944: 57–8). **(c)** It is used in the following ways:

- Simple past (*kena kāraṇena rodi?* – “Why did you cry?”; Kacc 419; Collins, 2006: 89; Duroiselle, 1906/1997: 162).
- Past actions in general (incl. the historical and narrative past; Warder, 1963/2001: 26).
- Present perfect (in particular; e.g. *kaṅkhaṃ vinodento dhammaṃ desesiṃ* – “I have taught the *dhamma*, removing doubt,” Dhp-a: 303; Warder: 26).
- Optative mood and future tense¹⁴² (e.g. *sace vaseyya agāraṃ, cakka-vattī bhaveyya so. aṭṭhānametaṃ yaṃ tādī, agāre ratimajjhagā* – “If he should live the home [life], he would become a wheel-turning monarch. There is no such ground [or ‘possibility’] that such a one would experience attachment regarding the home [life],” Ap I: 47; Clark, 2015: 228, n. 42; Norman, 1995: 141, n. 78).

(a) The indeclinable *mā* + the aorist intimates prohibition (Duroiselle, 1906/1997: 163) and may stand for all tenses (e.g. *mā gamī* – “Don’t go!”; Kacc 420). **(b)** The aorist has generally displaced the (OIA) imperfect and perfect aspects (Duroiselle: 162; cf. Oberlies, 2019: 437).

¹⁴² The latter is doubtful and perhaps only instanced by metrical exigencies.

Imperfect¹⁴³

Formation. (a) In its formation process, augment *a* may be tacked to the root, and consequently the personal endings are furnished (cf. Kusalagñāṇa, 2012: 165). (b) The imperfect is difficult to differentiate from the aorist. The only parameters aiding distinction are that the imperfect is said to form from the active stem and the aorist from the root; however, this is not an absolute measure and, in the end, these two can hardly be told apart (Duroiselle, 1906/1997: 94).

Usage. The imperfect denotes general past (Duroiselle, 1906/1997: 162), starting from yesterday (Kacc 418). The aorist has generally displaced the aspects of the imperfect and perfect (Duroiselle: 162; Geiger, 1916/1956: 158).

Perfect

Formation. (a) The perfect is characterized by the reduplication of the root. (b) Roots ending in a consonant insert *an* before the personal endings beginning with a consonant. (c) Duroiselle (1906/1997: 97) supplies conjugations for all persons and numbers,¹⁴⁴ but Warder (1963/2001: 170) mentions that only the third person (singular and plural) of the verb *ah* exists. Perniola (1997: 98), yet again, states that alone second and third person singular forms exist for the mentioned verb.

Usage. (a) The perfect is but seldom used and has almost entirely vanished (Duroiselle, 1906/1997: 162; Geiger, 1916/1956: 158). (b) It is employed in the sense of the indefinite past (*apacchakkha*; Kusalagñāṇa, 2012: 166), general past (Kacc 417; Duroiselle: 162) and also often the present (Warder, 1963/2001: 170). (c) There seem to be only very few occurrences in early Pāli literature; in works like the *Bodhivaṃsa* (11th century CE) and others of such kind, it seems to be applied more frequently (Ānanda-maitreya, 1993/2012: 91). (d) A number of perfect forms can be crafted by

¹⁴³ For the respective conjugations, see Table 6 in the “Tables” section.

¹⁴⁴ See Table 6 in the “Tables” section below.

aid of several auxiliary verbs.¹⁴⁵ (e) The aorist has mostly superseded the aspects of the imperfect and perfect (Duroiselle: 162).

Future Indicative¹⁴⁶

Formation. (a) The future indicative is regularly constructed by appending the affix *ssa* to the active base or directly to the root (usually having been strengthened) – with the subsequent addition of the present indicative suffixes (e.g. $\sqrt{disa} + e + ssa + ti \rightarrow desessati$; $\sqrt{thā} + ssa + ti \rightarrow \text{ṭhassati}$). (b) The interfix vowel *i* is often inserted between *ssa* and the root or active base, with the dropping of the root’s or stem’s final vowel. (c) When *ssa* is appended straight to a root with a final consonant, the same changes as occur in the aorist take also place within the future system, through the assimilation of the initial *s* of *ssa*. (d) Future passive verbs have the same affix and conjugations added to the passive base (Duroiselle, 1906/1997: 98; Warder, 1963/2001: 54–5).

Morphological Rules:

- The vowel *ū* of $\sqrt{hū}$ occasionally changes into *eha*, *oha*, *e* after the future ending has been affixed, which may be elided in the process (e.g. $\sqrt{hū} + ssa + ti \rightarrow hehiti$; Kacc 480).
- \sqrt{kara} may $\rightarrow kāha$ [occasionally] after the future ending has been affixed, which invariably is elided during the morphological process (e.g. $\sqrt{kara} + a + ssa + mi \rightarrow kahāmi$ – “I will do”; Kacc 481).

Usage. (a) The future in Pāli expresses the simple future as used and understood in English (e.g. *ahaṃ gacchissāmi* – “I shall go”; Kacc 421). (b) It can also be implemented to make generalizing statements (such as describing laws of nature), more emphatically than the present indicative, and to conclude inferences (e.g. *manussā marissanti* – “Humans will die”; *na vatimāni manussabhūtassa padāni bhavissanti* – “These cannot be the footprints of a human,” AN IV: 23 [AN 4.36]; Collins, 2006: 91; Warder,

¹⁴⁵ See under “Auxiliary Verbs” for details.

¹⁴⁶ For the respective conjugations, see Table 6 in the “Tables” section.

1963/2001: 55). **(c)** The future may also express regret, disapproval, indignation, perplexity, surprise, wonder, certainty, determination, decision, habit and what is probable (Gair & Karunatilake, 1998: 127; Warder: 55). **(d)** Sometimes, it is applied in the imperfective (progressive) sense: “He will be learning Pāḷi” (Palistudies, 2018c). **(e)** Duroiselle (1906/1997: 163) and Oberlies (2019: 448, f.n. 3; 478, f.n. 2) further stipulate these operations of the future:

- Mild imperative, giving a “courteous command” (hortative optative).
- Condition (e.g. “if ..., then ...”), with particles *ce*, *sace* and *yadi*.
- Used also instead of the aorist, often in sentences with *kathaṃ hi nāma* and *yatra hi nāma*.
- *Bhavissati* (third person singular form, meaning “It is”) is oftentimes used to express “It must be that.”
- *Bhavissati* preceded by the negative particle *na* may be rendered as “It cannot be.”
- *Jānissāmi* (third person singular form, meaning “I know”) is oftentimes used to express the idiom “I’ll see” (e.g. *hotu, pacchā jānissāmi* – “Be it so, I’ll see [to it] afterward [or ‘later’]”).

Conditional¹⁴⁷

Formation. (a) The conditional takes the augment *a* “almost obligatory” before the root and is formed from the future stem (Oberlies, 2019: 474, 501); the endings may form one unit with it (Thitzana, 2016: 605). **(b)** They are generally linked to the root or the active base with the interfix vowel *i* (e.g. *a + √paca + i + ssam* → *apacissam*; Duroiselle, 1906/1997: 99; Warder, 1963/2001: 331). **(c)** It may be positioned in both protasis (the clause containing the condition) and apodosis (the clause containing the conclusion); it can also be in the protasis with the other conditional, optative or future tense verb in the apodosis or vice versa (Oberlies: 502).

¹⁴⁷ For the respective endings, see Table 6 in the “Tables” section.

Usage. (a) The conditional is but rarely used (Warder, 1963/2001: 331); the optative is usually applied to express the typical sense of the conditional (Oberlies, 2019: 502). (b) It expresses future time relative to something past and an action unable to be acted out on account of some obstacle (Duroiselle, 1906/1997: 80), in the case when there is no accomplishment of an action (Kacc 422; Collins, 2006: 91). (c) It also denotes an incidence that might have occurred on the condition that the necessary things had been supplied; i.e. it communicates counterfactual assertions (e.g. *no cedam, bhikkhave, paṇḍito sucintitacintī ca abhaviṣṣa subhāsita bhāsī ca sukata kammakārī ca kena nam paṇḍitā jāneyyum*: ‘paṇḍito ayaṃ bhavaṃ sappuriso’ti? – “If the wise man, bhikkhus, would not be one who thinks good thoughts, utters good speech and performs good actions, by what would wise men know him: ‘This venerable, righteous man is a wise man,’” AN III: 2 [AN 3.3]; Ānandamaitreya, 1993/2012: 89; Collins: 92).

Causative¹⁴⁸

Formation. (a) To form the causative, the personal endings of the present indicative are added to its stem. (b) The causative stem is built from the root (often strengthening takes place) or the active base, which happens but rarely (Kacc 438; Ānandamaitreya, 1993/2012: 117; Collins, 2006: 95; Oberlies, 2019: 520). (c) Causative affixes not seldom coincide with the active base affixes of the eighth class (*e* and *aya*), which makes it sometimes hard to distinguish them from one another (Warder, 1963/2001: 79). (d) Causative verbs may take one object more than their corresponding non-causative forms: If the non-causative verb takes normally two objects, for example, the corresponding causative will take three (Warder: 79). (e) When built from intransitive roots or bases, they take one object, and when they are constructed from transitive ones, they take two (e.g. from transitive *√gamu*: *puriso purisaṃ gāmaṃ gāmayati* – “The man caused the man to go to the village”; Kacc 300; Hendriksen, 1944: 32; cf. Palistudies, 2018g; Warder: 79). (f) A double causative is

¹⁴⁸ For the respective causative affixes, see Table 6 in the “Tables” section.

applied for three objects and can occur with the affixes *e*, *āpe* or *āpāpe*¹⁴⁹ (e.g. *so purisaṃ dāsaṃ odanaṃ pācāpāpeti* – “He causes the man to cause the slave to cook the rice”; cf. Kacc 282; Duroiselle, 1906/1997: 112–3; cf. Perniola, 1997: 281; Warder: 79). **(g)** Causatives govern the accusative case; the instrumental case might be used (sometimes the genitive) in place of the factitive object¹⁵⁰ (e.g. *puriso purisena gāmaṃ gāmayati*; Kacc 300; Duroiselle: 156; Palistudies, 2018g). **(h)** The agent, as with ordinary verbs, stands in the nominative case (Warder: 79). **(i)** Duroiselle (p. 112) gives the following guidelines for the formation of the causative:

- Root vowels followed by one consonant are strengthened and remain unchanged when followed by two. Ānandamaitreya (p. 117) states, however, that strengthening takes place only optionally.
- Root *a* is occasionally not lengthened when followed by a single consonant.
- Roots in *i*, *ī* and *u*, *ū* form their causal form off the active base as well as other verbs.
- Some roots in *a* take *āpe*, *āpaya*, although Perniola (p. 103) says these endings are applied from the active base. Ānandamaitreya (p. 117) notes that roots as well as stems ending in *ā* and roots being classified under the seventh (our eighth) root affix class take the aforementioned endings.

Usage. **(a)** Causatives and double causatives can be used in all tenses and moods (incl. participles, absolutives, infinitives; Ānandamaitreya, 1993/2012: 117; Buddhadatta, 1937/1997: 120). **(b)** Causatives express the sense of end or cause (e.g. *attanā vippakataṃ attanā pariyosāpeti* – “He finishes himself what he himself left unfinished”; Sadd II: 175; Collins, 2006: 97). **(c)** They also carry the meaning of causing someone or something else to do an action designated by a root (i.e. to have something done; Kacc 282; Warder, 1963/2001: 78) and are often employed in the sense of

¹⁴⁹ This last-mentioned affix is attached to the root.

¹⁵⁰ The object or patient which was caused to do something etc.

directives or orders (Palistudies, 2018g). **(d)** Besides the straight causative sense, they may also have a special idiomatic meaning (Warder: 79), like a simple transitive sense (e.g. $\sqrt{cara} + e + ti \rightarrow cāreti$ – “He administers [an estate]”; Duroiselle, 1906/1997: 114; Oberlies, 2019: 520, f.n. 1). **(e)** The causative can act as an intransitive or transitive (usually) verb, with a single object or multiple ones (Collins: 96).

Desiderative

Formation. **(a)** Characteristic is the reduplication of the root in accordance with the regulations already given (Kacc 434; Duroiselle, 1906/1997: 115), with the weak form of the root’s reduplicated syllable. **(b)** To this, the affixes *kha*, *cha*, *sa* are added (e.g. $\sqrt{bhuja} + kha + ti \rightarrow bubhukkhati$ – “He wishes to eat”; Kacc 434; Warder, 1963/2001: 352).¹⁵¹

Usage. **(a)** The Desiderative is not extensively used in Pāli (mainly being restricted to verse) but often enough to warrant treatment (Duroiselle, 1906/1997: 115; Oberlies, 2019: 565; Warder, 1963/2001: 352). **(b)** As the name itself suggests, the desiderative is key in expressing the wish or desire to do or be that which is designated by the root (Duroiselle: 115; Oberlies: 565). **(c)** They are of the meaning of *tumicchāttha* (“wished [or ‘wanted’] for oneself”; e.g. $\sqrt{ghasa} + cha + ti \rightarrow jighacchati$ – “He wants to eat”; Kacc 434; Collins, 2006: 100).

Intensive¹⁵²

Formation and Usage. **(a)** The characteristic of the intensive conjugation is, here too, the reduplication of the root (Duroiselle, 1906/1997: 115). **(b)** It was stated that it is not possible or necessary to give an account of the rules for the formation of intensives; nevertheless, we find it specified that they do not form from polysyllabic roots, from roots with a vowel initial or from those pertaining to the eighth class of roots. **(c)** Intensive verbs express a frequent repetition or the intensification of the action intimated by the

¹⁵¹ See also Table 6 in the “Tables” section below.

¹⁵² For the respective intensive affixes, see Table 6 in the “Tables” section.

root (Duroiselle: 115; Collins, 2006: 101; Oberlies, 2019: 565). **(d)** Intensive adjectives are also found (e.g. *√lupa* → *lolupa* – “greedy”; Collins: 101).

Denominative

Formation. (a) The denominative verbs occur rarely, except for poetry and exaggerated speech, and are so called because they are constructed from nominal bases (incl. those of pronouns and adjectives) by means of certain affixes; however, they can also be formed from adverbs, onomatopoeias¹⁵³ etc. (Collins, 2006: 99; Perniola, 1997: 106; Warder, 1963/2001: 316). **(b)** In the formation process, the active base affixes of the first and eighth classes of roots are commonly utilized. **(c)** After the respective denominative affixes¹⁵⁴ have been appended to form the denominative stem, the personal endings of the tenses are added, as with other verbs (e.g. *samudda* + *āya* + *ti* → *sammuddāyati* – “to be or act like the ocean”; Collins: 99; Warder: 316). Absolutive, infinitive and participle affixes can also be appended (e.g. *mamāyita* – “cherished”; Oberlies, 2019: 517). **(d)** Duroiselle (1906/1997: 115) mentions an unusual approach to forming denominative verbs from nouns: The first, second or third syllable of the noun is reduplicated and the affix *īyisa* or *yisa* added to the word reduplicated in that manner. **(e)** The vowels *u* or *i* may or may not be inserted between the reduplication (e.g. *putta* → *pupputtīyisati* – “He wishes to be a son”).

Usage. (a) Denominatives can be transitive as well as intransitive, with the *e* affixes being usually transitive (e.g. *sukhāyati* – “He is pleased [intransitive]”; *sukheti* or *sukhāyati* – “He makes happy [transitive]”; Perniola, 1997: 108). **(b)** There are several ways of translating the denominative (Warder, 1963/2001: 316), usually having to express the following meanings (Duroiselle, 1906/1997: 114; Oberlies, 2019: 504):

¹⁵³ Merriam Webster (“Onomatopoeia,” n.d.): “[T]he naming of a thing or action by a vocal imitation of the sound associated with it (such as buzz, hiss) [...] also: a word formed by onomatopoeia.”

¹⁵⁴ See Table 6 in the “Tables” section.

- to act as, to be or treat like, to wish to be like that which is denoted by the noun;
- to wish for, to desire that which is signified by the noun;
- to change or make into that which is denoted by the noun;
- to use or make use of that which is expressed by the noun.

Absolutive¹⁵⁵

General Characteristics and Formation. (a) Absolutes are not declined since they are remnants of an old action noun in *tu*. As such, they have already been declined, so to speak (Collins, 2006: 114). (b) As is the case in Sanskrit, the absolutive in Pāḷi is employed to “knit together discourse” and may form complex sentences, with the agent performing a series of actions (by rule successive in time); occasionally, the absolutive “may function as the main verb of a sentence” (Hendriksen, 1944: 112; Oberlies, 2019: 634, f.n. 4; Warder, 1963/2001: 48). (c) Like other verbs, they may take objects in the accusative (Warder: 48). (d) Words governed by the absolutive mostly precede, but that is not always the case (Collins: 117). (e) When the agent is the same for the main verb and the absolutive, it is found to be in the nominative with active and in the instrumental or genitive with passive verbs (Perniola, 1997: 375). (f) The absolutive is generally subordinate to a finite verb but occurs also with other forms, such as present participles, infinitives and action nouns (e.g. *tadā gāthaṃ vatvā pakkanto* [present participle] *paṇḍitavāṇijo pana ahameva ahosi* – “Now at that time, I was indeed the wise merchant who went away, having recited the stanza,” Jā-a I: 132 [commentary on Jā 43]; Hendriksen: 7, 108–11; Perniola: 375). (g) Verbs may exhibit multiple forms of the absolutive; however, this does not affect the meaning (e.g. absolutes of the verb *gaṇhāti* are: *gaḥetvā*, *gaḥetvāna*, *gaṇhitvā*; Hendriksen: 108; Oberlies: 638). (h) “A few nouns,” Oberlies (p. 654) states, “are abstracted from absolutes” (e.g. *upanidhā* [“comparison”] ← *upanidhāya* [“in comparison”]).

¹⁵⁵ See Table 6 in the “Tables” section for the respective suffixes.

(a) Endings are appended to the root (occasionally being strengthened), active stem (at least in part) or causative stem (e.g. *√yuja* + *āpe* [causative affix] + *tvā* → *yojāpetvā* – “having yoked,” DN II: 42 [DN 16]; Collins, 2006: 114; Geiger, 1916/1956: 159; Oberlies, 2019: 634). (b) Before *ya*, a *t* may be inserted (Collins: 114) between the absolutive suffixes and a root ending in a vowel (Duroiselle, 1906/1997: 107). (c) Some roots seem to take an absolutive suffix made up of *ya* and *tvā*, being joined to the root by means of *i*, but most can have several forms (Duroiselle: 108). (d) Further rules in the formation of the absolutive with suffixes *tvā*, *tvāna*, *tūna* are (Duroiselle: 107–8; Geiger, 1916/1994: 195; Perniola, 1997: 124):

- They are joined to the root by means of connecting vowel *i* (e.g. *√khāda* + *i* + *tvā* → *khāditvā*).
- They are joined to the active base by mean of connecting vowel *i* (*√sara* + *a* + *i* + *tvā* → *sarivtvā*).
- Initial *t* of the suffix is assimilated to the last root consonant (in a few cases).
- Root vowel is strengthened (e.g. *√nī* + *tvā* → *netvā*).
- Last (C) [of root] → Ø [occasionally] / __ *tvā*, *tvāna* and *tūna* (e.g. *√chida* + *tvā* → *chetvā*).
- Final (V̄) [of root] → (V̄) / __ *tvā*, *tvāna* and *tūna* (e.g. *√dā* + *tvā* → *datvā*).

Regarding suffix *ya*:

- It is mostly used with roots compounded with prefixes (e.g. *saṃ* + *√ikkha* [“to see”] + *i* + *ya* → *samekkhiya* – “having reflected”).
- It is used with simple roots at times and with interfix vowel *i* (e.g. *√cinta* + *i* + *ya* → *cintiya*).
- Regularly *tya* → *cca* (e.g. *paṭi* + *√i* [“to go”] + *tya* → *paṭicca* – “because of,” “following upon,” “from”).
- It is added directly to roots ending in long *ā* (e.g. *vi* + *√hā* + *ya* → *vihāya*).
- It may be added to the active stem.

- It is assimilated to the last root consonant (e.g. *ni + √sada + ya → nisajja*).
- It is occasionally dropped during the formation process, with the root remaining (e.g. *abhiññāya → abhiññā*).
- *m → n / _ tvā* (e.g. *√gama + tvā → gantvā*; Duroiselle 1906/1997: 18).

Usage. (a) Some facets of the way absolutes are employed can be more easily grasped when the remnant nature of the instrumental case is borne in mind, with which it has a quasinominal, adverbial nature (Collins, 2006: 114). **(b)** In the majority of instances, the absolute is used to express a previous action performed by the subject of the sentence. It is understood as a verb which stands in the same tense and mood, but merely *understood* since it is ultimately of an uninflected nature (Collins: 115). **(c)** The primary uses of the absolute are as follows (Kacc 564; Collins: 115–6; Hendriksen, 1944: 113–6; Perniola, 1997: 375):

- Past, agent of absolute and main verb being the same (e.g. *atha kho bhagavā soṇadaṇḍaṃ brāhmaṇaṃ dhammiyā kathāya [...] samādapetvā [...] pakkāmī* – “And then the Blessed One went away, having [...] roused [...] the Brahmin Soṇadaṇḍa with a talk on *dhamma*,” DN I: 59 [DN 4]).
- Same time, agent of absol. and main verb being the same (e.g. *so taṃ dhammaṃ sutvā tathāgate saddhaṃ paṭilabhati* – “Hearing that *dhamma*, he gains faith in the Tathagata,” DN I: 30 [DN 2]).
- Future time, agent of absol. and main verb being the same (e.g. *dvāraṃ āvaritvā pavisati* – “He enters and closes the door”).
- Agents of the absolute and main verb are different (e.g. *paññāya cassa disvā āsavā parikkhīṇā* – “And for him, having seen with wisdom, the influxes are extinguished,” MN I: 109 [MN 25]).

(a) In the case of completed action, “having” + a past participle may be used when translating into English or a past tense followed by the copulative conjunction “and” (e.g. *so tatra gantvā idha āgacchati* – “Having gone there, he comes back here”), therewith also instancing what has been said earlier; i.e. that verbs in the absolute may express consecutive action

(Duroiselle, 1906/1997: 164; Hendriksen, 1944: 112; Perniola, 1997: 376).

(b) Absolutive verbal forms can be employed to form conditional clauses as well (e.g. *mañhi, bhante, aññatitthiyā sāvakam labhitvā kevalakappam nāḷandaṃ paṭākam parihareyyum* – “Indeed, venerable Sir, if adherents of other sects had gained me as a disciple, they would carry about a flag throughout the whole of Nālanda,” MN II: 23 [MN 56]; Perniola: 376–7).

(c) The sense of cause is occasionally expressed (e.g. *kasmā evaṃ vadasīti?* – *imesaṃ bahubhāvaṃ disvā*: “Why do you speak like that?” – “Because of having seen their abundance,” Jā-a I: 153 [commentary on Jā 62]; Hendriksen: 113).

(d) Before an absolutive, the negative prefix *a* signifies the meaning of “without” or “not having.”

(e) The subsequent particle *api*, on the other hand, suggests a translation by “although” or “even though,” forming concessive clauses (e.g. *akataññū puggalo cakkavattirajjaṃ datvāpi tosetum nasakkā* – “An ungrateful person cannot be pleased even though having been given the kingdom of a universal monarch”; Duroiselle: 165).

(f) The *va* (*eva*) following the absolutive might be rendered as “as soon as” or “just as” (e.g. *so vāandro attano puttaṃ disvāva [...]* – “As soon as he saw his offspring, the monkey [...],” Jā-a I: 148 [commentary on Jā 58]; Duroiselle: 164).

(g) The absolutive *hutvā* (“having been”) can mean “as,” “in the capacity of” (e.g. *tvaṃ puriso hutvā ulloketum na sakkosi; ahaṃ kathaṃ sakkhissāmi* – “You, as a man, are not able to behold; how will I be able?”, Vibh-a: 175; Hendriksen: 114).

(h) An absolutive may be translated with a present participle (Duroiselle: 165; Hendriksen: 114).

(i) Some forms are also used as postpositions, such as (Duroiselle: 165; Perniola: 377):

- *Paṭṭhāya* (“since,” “from” etc.), which governs the ablative (e.g. *aruṇuggamanato paṭṭhāya* – “from dawnrise,” Sp I: 27).
- *Sandhāya, ārabha* (both “concerning” etc.); these and the following items govern the accusative (e.g. *sace kho te, jīvaka, idaṃ sandhāya bhāsitaṃ [...]* – “if it has been said by you, Jīvaka, concerning this [...],” MN II: 17 [MN 55]).
- *Paṭicca* (“because of” etc.; e.g. *macchariyaṃ paṭicca ārakkho* – “Because of stinginess guarding comes about,” DN II: 25 [DN 15]).

- *Nissāya, upanissāya* (both “near” etc.; e.g. *idhāvuso, bhikkhu satthāraṃ upanissāya viharati* – “whenever, friend, a bhikkhu lives near a teacher,” DN III: 130 [DN 34]).

Infinitive¹⁵⁶

General Characteristics and Formation. (a) The infinitive expresses the “idea of the verb without any indication of time” (Hendriksen, 1944: 92; Perniola, 1997: 371); it is the accusative or dative of an old action noun in *tu*, the absolutive being its instrumental, and is indeclinable in Pāḷi (Collins, 2006: 117; Hendriksen: 94–5; Warder, 1963/2001: 134). (b) It normally precedes and is dependent upon the main verb or predicative (Ānandamaitreya, 1993/2012: 17; Gair & Karunatilake, 1998: 23). (c) The subject is virtually always the same as that of the main verb (Gair & Karunatilake: 23). (d) The infinitive usually precedes the principle verb but may also follow it (Hendriksen: 96). (e) Hendriksen (p. 93) points out that the agent even of the active infinitive may stand in the instrumental (e.g. [possibly] *na dāni sukaraṃ amhehi lābhasakkārasiloke pariccajituṃ* – “It is not easy for us, now, to abandon gain, honor and fame,” MN II: 96 [MN 76]). (f) The suffix *tuṃ* is applied most commonly, but other rare suffixes such as *tāye, tave, tuye* are also found, although (seemingly) being confined to verse compositions (Geiger, 1916/1994: 190–1; Oberlies, 2019: 627). (g) Infinitives are formed from transitive and intransitive stems as well as from causatives, double causatives, desideratives and denominatives (e.g. *gopayituṃ*) – they are used in any tense or mood (Kacc 561; Collins: 117–8; Geiger: 192). (h) The prefix *a* may be added to make them negative (Warder: 135). (i) The infinitive can be formed with the elision of final *ṃ* of *tuṃ*, mostly happening when *ye* (e.g. *kātuṃ + ye* → *kātuye*) or the word *kāma* is appended (“desiring to”; e.g. *atha kho milindo rājā yenāyasmā nāgaseno tenupasaṅkami [...] nāṇālokaṃ uppādetukāmo [...]* – “And then king Milinda went to where Ā. Nāgasena was [...] being eager to cause the light of knowledge to arise [...],” Mil: 145; Collins: 119; Oberlies: 627).

¹⁵⁶ See Table 6 in the “Tables” section below for the respective suffixes.

(j) Sometimes, two forms of an infinitive exist (e.g. *chettum*, *chinditum*; Oberlies: 630).

(a) Suffixes *tave*, *tuye*, *tāye*, *tase* are added to the strengthened root (ending in vowels or consonants) or to the active stem with the interfix vowel *i* (e.g. $\sqrt{ni} + tave \rightarrow netave$; Kacc 561; Geiger, 1916/1994: 190; Perniola, 1997: 128). (b) The suffix *tum* is appended according to the following schema (Kacc 561; Duroiselle, 1906/1997: 109; Gair & Karunatilake, 1998: 22; Perniola: 126–7; Warder, 1963/2001: 134):

- directly to roots with final *ā* or vowels in general (e.g. $\sqrt{dā} + tum \rightarrow dātum$);
- directly to strengthened roots (e.g. $\sqrt{ni} + tum \rightarrow netum$);
- to roots by means of interfix vowel *i* (e.g. $\sqrt{jīva} + i + tum \rightarrow jīvitum$);
- to active stems in *a* by means of interfix vowel *i* (e.g. *bhava* + *i* + *tum* $\rightarrow bhavitum$);
- directly to active stems in *e* and *o* (e.g. *dese* + *tum* $\rightarrow desetum$);
- initial *t* of *tum* is assimilated to the last consonant of the root or vice versa (e.g. $\sqrt{bhujā} + tum \rightarrow bhottum$) or vice versa.

Usage. (a) Depending on a main verb (incl. predicated adjectives), the infinitive conveys the idea of “purpose of,” “in order to” and is also used with verbs denoting intention, worthiness, ability, possibility and appropriateness (e.g. *ninditumarahati* – “he who deserves to blame [that person]”; *alameva dānāni dātum* – “It is just appropriate to give alms”; Kacc 561–563, 637; Gair & Karunatilake, 1998: 23; Hendriksen, 1944: 95). (b) It implies a wish or desire to do something and can be rendered into English with the so-called full infinitive or to-infinitive (e.g. *bhāsītum* – “in order to speak”; Palistudies, 2018d). (c) The Infinitive is used passively and actively (Hendriksen: 93; Warder, 1963/2001: 135). (d) The dative of nouns in *āya* is often used in an infinitive sense (Duroiselle, 1906/1997: 109; Geiger, 1916/1994: 191); the infinitive is interchangeable with the dative of purpose (Warder: 134). (e) As already stated above, it takes on a negative sense with the prefix *a/an* (Oberlies, 2019: 628; Warder: 135).

Participles

*Kinds of Participles*¹⁵⁷

1. Present active participle.
2. Present middle participle.
3. Present passive participle.
4. Past active participle.
5. Past passive participle.
6. Future active participle.
7. Future middle participle.
8. Future passive participle (aka gerundive, participle of necessity).
9. Absolutive (aka *gerund*).¹⁵⁸

Present Participle

Formation. (a) Both the active and middle forms are built from the active base of verbs (but the latter may also be constructed from roots) and have the selfsame meaning (Dhammajoti, 2018: 96; Gair & Karunatilake, 1998: 36; Hendriksen, 1944: 8; Warder, 1963/2001: 46). (b) Verbal bases which end in *e* may change to *aya* before affixes *māna* and *āna* are applied. (c) Active bases ending in *e* or *o* merely take the *anta* suffix (Perniola, 1997: 109). (d) Present active participles formed with the affix *anta* etc. are declined in a similar way as possessive adjectives with the stem in *vantu* and the form of the present middle participles in *māna* etc. like *a*-ending stems (cf. Oberlies, 2019: 257). (e) Feminine stems in *antī* are declined like feminine stems in *ī*¹⁵⁹ (Ānandamaitreya, 1993/2012: 60; Dhammajoti: 95–6).

Usage – as Adjectives. (a) Participles have the nature of verbal adjectives and must, therefore, agree with the nouns they qualify in number, gender and case (Duroiselle, 1906/1997: 100; Oberlies, 2019: 571, f.n. 1; Perniola, 1997: 357). (b) Present participles are oftentimes used as adjectives with no relation to time (Collins, 2006: 106) and may share the same agent as

¹⁵⁷ See Table 6 in the “Tables” section below for the respective affixes.

¹⁵⁸ See above.

¹⁵⁹ See Table 3 in the “Tables” section for details.

the main verb (Palistudies, 2018e). **(c)** As adjectives, they may precede or follow the noun which they modify (e.g. *addasāma kho mayaṃ, bho, taṃ bhavantaṃ gotamaṃ gacchantaṃ* – “Sir, we have seen the Venerable Gotama walking,” MN II: 168 [MN 91]; Gair & Karunatilake, 1998: 37).

Usage – as Verbs. **(a)** The present participle can also function as a verb, with the same syntactical function as a finite verb (Oberlies, 2019: 571, f.n. 1). **(b)** It is commonly translated into English by “while” or “when” + a present participle and signifies an unfinished action occurring simultaneously with the action as designated by the main verb in the past, present or future tense (e.g. *saramāno rodi* – “Remembering, she wept”; *saramāno rodati* – “Remembering, she weeps”; *saramāno rodissati* – “Remembering, she will weep”; Ānandamaitreya, 1993/2012: 61; Collins, 2006: 106; Hendriksen, 1944: 7; Oberlies: 571, f.n. 1; Warder, 1963/2001: 46). **(c)** This participle generally expresses the continuous, progressive and imperfect aspects (e.g. *bhikkhu gacchanto vā ‘gacchāmi’ti pajānāti* – “Or while walking, a bhikkhu knows: ‘I am walking,’” MN I: 35 [MN 10]; Kacc 565; Collins: 106). **(d)** It can sometimes also be translated by a conditional clause (“when,” “if”; e.g. *evaṃ karonto asātamante lacchasi, akaronto na lacchasi* – “If you do so, you’ll obtain the dolor text; if you don’t do it, you won’t obtain it,” Jā-a I: 150 [commentary on Jā 61]; Oberlies: 579). **(e)** The present participle also appears to be capable of being correctly rendered with the simple present tense (e.g. *santaṃyeva kho pana paraṃ lokam ‘natthi paro loko’ti vācam bhāsati* – “Although the other world exists, he says ‘there is no other world,’” MN II: 34 [MN 60]; Hendriksen: 7). **(f)** Oberlies (p. 571, f.n. 1) mentions that present participles may also express the ideas of cause or purpose but gives no examples. **(g)** When standing in relation to a present participle, the particle *pi* (= *api*) may be rendered as “although,” introducing a concessionary clause (e.g. *evampi kho ahaṃ karonto* – “although I act thus,” MN I: 210 [MN 50]; Duroiselle, 1906/1997: 165; Palistudies, 2018e; Perniola, 1997: 359). **(h)** The present participle is able to be used actively as well as passively (Buddhadatta, 1937/1997: 87).

Usage – as Substantive Nouns. (a) Present participles may also act as substantive nouns (Ānandamaitreya, 1993/2012: 61) and are sometimes used substantively as an action noun (e.g. *kubbāna* – “doing”; cf. Warder, 1963/2001: 47). (b) In this case, they may be translated by means of a relative clause (beginning with the personal pronoun “he” or the indefinite pronoun “one”; cf. Bodhi, 2020: 28) or a participle construction containing a present participle; in the case of the former relative clause, the present tense, besides its use together with the present participle, was suggested to be permissible too (e.g. [relative clause] *idaṃ pana paralokaṃ gacchantassa pātheyyaṃ bhavissatī* – “This will be a provision for the one who goes to the next world [after death],” Pd IV: 3; [participle construction] *jānato passato āsavānaṃ khayo hoti* – “For the one knowing, the one seeing, the destruction of the taints occurs,” SN V: 211 [SN 56.25]; Ānandamaitreya: 62; cf. Bodhi: 27; cf. Duroiselle, 1906/1997: 165; Gair & Karunatilake, 1998: 37).

Past Passive Participle¹⁶⁰

Formation. (a) Past passive participles occur frequently and are to be constructed from the root: directly if it ends in a vowel (with a potential insertion of an *i* between the root and the subsequently added respective affixes) or with certain morphological rules effected if it ends in a consonant (Duroiselle, 1906/1997: 102). (b) The *ta* affix is applied after *√chada*, *√citi*, *√su*, *√nī*, *√vida*, *√pada*, *√tanu*, *√yata*, *√vada*, *√mada*, *√yuja*, *√vatu*, *√mida*, *√mā*, *√pu*, *√kala*, *√vara*, *√ve*, *√pu*, *√gupa*, *√dā* etc. (Kacc 656). (c) Past passive participles are also formed from the active base, and some may also form irregularly (Collins, 2006: 107; Dhammajoti, 2018: 65; cf. Geiger, 1916/1956: 159). (d) They decline like *a/ā*-stem substantive nouns (cf. Bodhi, 2020: 29; Duroiselle: 105).

Usage – as Adjectives. (a) The past passive participles, like all participles, are of the nature of verbal adjectives and must agree with their nouns in number, gender and case (Duroiselle, 1906/1997: 100; Oberlies, 2019: 571, f.n. 1; Perniola, 1997: 357). (b) Past passive participles as adjectives

¹⁶⁰ See Table 6 in the “Tables” section for the respective suffixes.

tives may either precede or succeed the substantive noun they qualify (e.g. *subhāvitam cittam* – “the well-developed mind,” Dhṛ: 2, v. 14; Gair & Karunatilake, 1998: 72). **(c)** When modifying a noun or pronoun, their meaning does not necessarily have to be past (e.g. *bhinnena sīsenā* – “with broken head,” MN I: 89 [MN 21]; Dhammajoti, 2018: 66; Duroiselle: 100; Perniola: 362). **(d)** In equational sentences,¹⁶¹ a past passive participle can function as an adjectival predicate (i.e. an adjective that succeeds a linking verb, such as “am,” “is,” “are,” “has been”), modifying the sentence subject (e.g. *ahaṃ kho pana susikkhito* – “I am indeed well trained,” Vin I: 25 [Pār 2]; Gair & Karunatilake, 1998: 72). **(e)** There might be a case where a translation by means of a relative clause appears warranted (e.g. *bhagavantam pabbajitam anupabbajanti* – “They go forth alongside the Blessed One, who [already] went forth,” Mp I: 74).

Usage – as Verbs. **(a)** The past passive participles can oftentimes also function as verbs, with the same syntactical function as a finite verb (cf. Hendriksen, 1944: 9, 50; cf. Oberlies, 2019: 571, f.n. 1), with auxiliary verbs being explicit or implicit (e.g. [explicit] *tena kho samayena āyasmato upasenānassa kāye āsīviso patito hoti* – “At that time, a snake had fallen on the body of Ā. Upasena,” SN IV: 20 [SN 35.69]; Collins, 2006: 108). **(b)** They generally express completed action and, as the name suggests, are usually employed in a passive sense (e.g. *bhāsitaṃ* – “is said [by such and such a person]”; Kacc 556; Dhammajoti, 2018: 65), although an active sense is also assumed when they are formed from roots indicating motion, those meaning “to drink,” “to eat,” “to give birth to” (inter alia), transitive roots used intransitively and intransitive roots in general (Dhammajoti: 66; Duroiselle, 1906/1997: 165; cf. Hendriksen: 9; Oberlies: 618; Warder, 1963/2001: 40). **(c)** In the latter case (active sense), they take an accusative object, agreeing with the agent in number, gender and case (e.g. *samaṇo khalu bho gotamo amukaṃ nāma gāmaṃ [...] osaṭo* – “The dear ascetic Gotama has indeed come to such and such a village,” MN I: 119 [MN 27]). **(d)** In the former

¹⁶¹ These are sentences without a finite verb but, inter alia, with adjectival predicates.

case (passive sense), the agent is found to be in the instrumental case, with the past passive participle agreeing with the patient, again in number, gender and case (e.g. *svākkhāto bhagavatā dhammo* – “The *dhamma* has been well proclaimed by the Blessed One,” DN II: 88 [DN 18]; Ānandamaitreya, 1993/2012: 33; Dhammajoti: 67; Duroiselle: 166; cf. Warder: 40).

(a) The past passive participle can be translated by means of the simple past,¹⁶² which is used for narrations, or present perfect tense – in fact, it has been said that they denote the past in general (*atīto*; e.g. *ayaṃ kho no, bhante, antarākathā vippakatā; atha bhagavā anuppattoti* – “Now this was, venerable Sir, the chance talk that was not finished, then the Blessed One arrived,” DN III: 16 [DN 25]; Kacc 555; Hendriksen, 1944: 9, 51, 53, 60–8). **(b)** Not seldom, it may also be rendered as a present participle, an absolutive or is applied in a present sense (e.g. [absolutive] *nisinno purise āñāpesi* – “He commanded [his] men, having sat down,” Jā-a I: 71 [commentary on Jā 4]; Kacc 650; Ānandamaitreya, 1993/2012: 178; Duroiselle, 1906/1997: 165–6; Hendriksen: 13–5). **(c)** Sometimes, the past passive participle functions almost like an infinitive (e.g. *aññatra asitapītakhāyitasāyitā* – “except to eat, drink and consume food,” MN I: 59 [MN 12]; Oberlies, 2019: 626, f.n. 1). **(d)** In the neuter gender, it can also be employed impersonally (e.g. *evaṃ me sutam* – lit. “Thus it was heard by me,” DN I: 1 [DN 1]; Dhammajoti, 2018: 68).

(a) The past passive participle is often combined with auxiliary verbs (Oberlies, 2019: 591, 592, f.n. 4). **(b)** With first and second person auxiliary verbs¹⁶³ formed from *√as*, an emphasized present perfect is to be understood (e.g. *ahamasmi sammā paṭipanno* – “I have practiced rightly,” DN I: 5 [DN 1]; cf. Dhammajoti, 2018: 67; Warder, 1963/2001: 233). **(c)** Past participles + auxiliary verbs formed from *√hū* (*hoti* etc.) carry the same sense (e.g. *so ārāmaṃ gato hoti* – “He has gone to the monastery”) or are – with *tena-samayena* constructions – expressive of the past continuous aspect (“I was going” etc.; Warder: 235). **(d)** With *bhavissati* (not necessarily

¹⁶² The past passive participle is never used together with auxiliary verbs to denote the simple past (Hendriksen, 1944: 78).

¹⁶³ For an exposition on the different meanings of the past passive participle with auxiliary verbs, refer to the section “Auxiliary Verbs” below.

of future import), they bear the meaning of “might have,” “would have,” “will have” (Gair & Karunatilake, 1998: 171).

Usage – as Substantive Nouns. (a) Past passive participles may act as substantive nouns too, incl. action and agent nouns (with the first-mentioned type being in the neuter gender; e.g. *dinnaṃ* – “giving”; *na hi pabbajito parūpaghātī* [...] – “One who has gone forth [i.e. ‘a monk’] is certainly not one who harms others [...],” Dhṛ: 13, v. 184; Kacc 556–557; Ānandamaitreya, 1993/2012: 178; Collins, 2006: 109; Hendriksen, 1944: 15; Oberlies, 2019: 626; Thitzana, 2016: 714). (b) They can be translated by a relative clause “who/which is,” as can be gathered from the previous example. (c) Past passive participles are sometimes used as neuter verbal nouns to designate either the action of the verb or the resultant effect of it (e.g. *dinnaṃ* – “giving,” “the given [thing]”; *natthi buddhānamiñjitaṃ* – “There is no wavering for the Buddhas,” Dhṛ: 18, v. 255; Hendriksen: 16; Perniola, 1997: 363; cf. Thitzana: 712).

Past Active Participle¹⁶⁴

Formation. (a) All participles have the nature of verbal adjectives and must, therefore, agree with the nouns they modify in number, gender and case (Duroiselle, 1906/1997: 100; Oberlies, 2019: 571, f.n. 1; Perniola, 1997: 357). (b) The past active participles occur but rarely. (c) The respective endings are tacked to the past passive participle and declined like the possessive adjectives in *vantu* (*vā*) and *in* (*i*) respectively (*bhuttavī* – “he who has eaten”; Bodhi, 2020: 30; Duroiselle: 105; Geiger, 1916/1956: 220), but some irregular forms exist (e.g. *vidvā*, *viddasu*; Perniola: 119). (d) Functioning as verbs, they may take objects in the accusative case, with the agents standing in the nominative (Warder, 1963/2001: 274).

Usage.¹⁶⁵ (a) The absolutive has mostly supplanted the past active participle in Pāli. (b) The past active participles, like the other participles,

¹⁶⁴ See Table 6 in the “Tables” section for the respective endings.

¹⁶⁵ See also the section “Locative, Genitive, Accusative and Nominative Absolute” for a possible absolute construction and viable translation.

can be used as substantive nouns, adjectives and verbs (e.g. [adjective] *katāvī* – “expert”; Kacc 555; Geiger, 1916/1956: 221; Hendriksen, 1944: 10; cf. Warder, 1963/2001: 274). **(c)** They generally denote the past (*atīto*), with a suggested translation by means of the present/past perfect aspect (e.g. *so sīhamādinnavā* – “He has/had captured a lion,”¹⁶⁶ Mhv: 35; Hendriksen: 1; Warder: 275). **(d)** A translation by means of a past passive participle clause (i.e. “having” + a past participle) has been offered as well (e.g. “he, having captured the lion [...]” [Pāḷi text is basically the same as in the previous example]; cf. Kacc 555; Duroiselle, 1906/1997: 165; Hendriksen: 10–1). **(e)** Similarly to the past passive participle, a relative clause containing a past passive participle or regular adjective might be used for translation (e.g. [past passive participle] *vusitavā* – “one who has lived [the spiritual life perfectly],” DN III: 34 [DN 27]; [adjective] *vijitāvī* – “the one who has been victorious,” Th: 2, v. 5; Geiger: 220–1; cf. Bodhi, 2020: 30–1; Hendriksen: 10). **(f)** Hendriksen (p. 10), explaining the functions of the affix *vantu* (*vā*), translated with a relative clause containing a present tense (e.g. *taṃ avidvā* – “he who does not know it,” MN I: 197 [MN 46]). **(g)** These participles are also capable of being nominalized (e.g. *hutāvī* – “the given”; Thitzana, 2016: 712).

Future Passive Participle¹⁶⁷

Formation. **(a)** Future passive participles are either formed from the root – usually having been strengthened – or the active base (generally the case with roots ending in *u* and *ū*; Collins, 2006: 110; Duroiselle, 1906/1997: 105; cf. Geiger, 1916/1956: 159; Perniola, 1997: 368). **(b)** At times, interfix vowel *i* is inserted (Dhammajoti, 2018: 131). **(c)** The affixes *tabba* and *anīya* are the ones most commonly encountered (Hendriksen, 1944: 12).

General Characteristics and Usage as Verbs. **(a)** The future passive participle can also function as a verb, with the same syntactical function as a finite verb (Oberlies, 2019: 571, f.n. 1); in fact, as “a rule it is employed

¹⁶⁶ It would be “slain” or “split” when reading *ādiṇṇavā* (Andersen, 1901: 112).

¹⁶⁷ See Table 6 in the “Tables” section for the respective suffixes.

as a sentence verb,” perhaps there being “a tendency to use *-tabba-* with the gerundive [i.e. future passive participle] functioning as sentence verb and *-anīya-* in other cases” (Hendriksen, 1944: 11–2). **(b)** The future passive participle denotes that what is expressed by the root or base – it signifies that which is to be, ought to be, is fit to be, can be or that must be done or undergone (e.g. *majjhatteneva bhavittabbaṃ* – “One ought to be just impartial,” Jā-a I: 157 [commentary on Jā 64]; Ānandamaitreya, 1993/2012: 179; Hendriksen: 11). **(c)** One may, generally, translate as “ought to be,” “should be,” “is [or ‘has’] to be” and occasionally as “might be,” “can be,” “may be” + the past passive participle (e.g. *evaṃ tathāgatassa sarīre paṭipajjitabbaṃ* – “In such a way the body of the Tathagata should be handled,” DN II: 59 [DN 16]; *tassa ‘sādhū’ti bhāsitaṃ abhinanditabbaṃ anumoditabbaṃ* – “Therefore, by saying ‘very well,’ it should be approved of, should be appreciated,” DN III: 53 [DN 29]; Ānandamaitreya: 179; Duroiselle, 1906/1997: 166; Warder, 1963/2001: 104).

(a) Despite the fact that it is called “future,” it is more frequently employed in sentences with past or present verbs; it can also bear a non-temporal meaning, therewith communicating general truths, duties etc. (Collins, 2006: 110). **(b)** The agent, when expressed, is either found to be in the instrumental, genitive or dative case, whereas the subject, with future passive participles constructed from transitive roots/bases, usually stands in the nominative (e.g. *cātumahāpathe tathāgatassa thūpo kātabbo* – “One should build a stupa for the Tathagata at a crossroad,” DN II: 60 [DN 16]; cf. Ānandamaitreya, 1993/2012: 179; cf. Duroiselle: 166). **(c)** It may further express the following ideas (Kacc 635–636; Collins: 112; Duroiselle: 166):

- | | |
|-----------------------------|---------------------------|
| – Authorization. | – Obligation. |
| – Command. | – Opportunity. |
| – Debt owed. | – Permission. |
| – Due time to do something. | – Polite imperative. |
| – Exhortation. | – Probability. |
| – Inevitability. | – Suitability or fitness. |
| – Likelihood. | – Sure action or event. |
| – Necessity. | |

(a) Future passive participles are also capable of functioning as the sentence predicate, as can be seen from the examples already given. (b) In the accusative singular neuter, the future passive participle can be used impersonally, usually (but not invariably) when formed from intransitive roots/bases (Collins, 2006: 111; Perniola, 1997: 370). It is acceptable in Pāli to have the impersonal passive construction both with an agentive oblique (i.e. a by-phrase) and without (e.g. [without] *asantiyā āpattiyā tuṇhī bhavitabbaṃ* – “When there is no offence, there should be silence,” Vin III: 73; [with] *yassa rañño cakkavattissa dibbaṃ cakkaratanam osakkati ṭhānā cavati, na dāni tena raññā ciraṃ jīvitabbaṃ hoti* – “When for the wheel-turning monarch the divine wheel-treasure draws back, retreats from its place, the monarch now has not long to live [lit. ‘it has not to be lived long by the monarch’],” DN III: 24 [DN 26]). (c) It is commonplace to find an action thus expressed in a passive voice construction using an accusative singular neuter future passive participle; however, “in English the action is normally expressed in the active” (e.g. *avassaṃ mayā maritabbameva* – “Inevitably I have to die [lit. ‘Inevitably dying has to be undergone by me’],” Dh-p-a: 271; Dhammajoti, 2018: 132). (d) With the dative or infinitive, the future passive participle *bhabba* (“able”) is utilized to mean “able to,” “capable of,” “permitted to” (e.g. *abhabbo kho yaso kulaputto hīnāyāvattitvā kāme paribhuñjituṃ* – “Yasa, the son of family, is indeed incapable of returning to the low [life; i.e. that of a householder] in order to enjoy sensual pleasures,” Vin III: 12; Collins: 111). (e) We can garner from all the given examples and explanations that the future passive participle is employed in an active, passive as well as a stative passive sense (Kacc 625; Collins: 111).

Usage – as Adjectives. (a) The participles have the nature of verbal adjectives and must, therefore, agree with the nouns they modify in number, gender and case (Duroiselle, 1906/1997: 100; Oberlies, 2019: 571, f.n. 1; Perniola, 1997: 357). (b) Numerous future passive participles ending in *anīya* have an independent idiomatic meaning as ordinary adjectives (and substantive nouns), being somewhat disconnected from the denotations encountered above (e.g. *nāhaṃ, bhikkhave, aññaṃ ekarūpampi samanupassāmi [...] evaṃ madanīyaṃ [...] yathayidaṃ, bhikkhave, itthirūpaṃ* – “I do

not, bhikkhus, see even one form [...] that is so enticing [...] as the form of a woman,” AN V: 33 [AN 5.55]; Collins, 2006: 110; cf. Perniola: 368; cf. Warder, 1963/2001: 107).

Usage – as Nouns. (a) Besides all that, future passive participles are also capable of operating as abstract neuter nouns (e.g. *kiccaṃ* – “[something] that should be done”; *kataṃ karaṇīyaṃ* – “done what has to be done,” MN I: 14 [MN 4]; cf. Kacc 540–542 etc.; Ānandamaitreya, 1993/2012: 179; Duroiselle, 1906/1997: 166; Warder, 1963/2001: 107). **(b)** As mentioned and elaborated upon in the previous section on adjectival usages contained within this chapter, substantive nouns formed with affix *anīya* carry an idiomatic significance somewhat dissociated from their usual meaning.

Auxiliary Verbs

Formation and Usage. (a) Auxiliary or helping verbs are a characteristic feature of the Pāli language (Geiger, 1916/1956: 158). **(b)** The principle ones of these are built from *√as*, *√hū*, *√car*, *√thā*, *vatt*, *vihar*.¹⁶⁸ **(c)** They supply nuances of meaning not possible to be expressed by an isolated verb standing by itself (Warder, 1963/2001: 233). **(d)** Sometimes, any forms of *√hū* or *√bhū* (such as *hoti*, *ahosi*, *hessati*, *hotu*) are following the declinable participle in relation to the sense it expresses (Ānandamaitreya, 1993/2012: 178). **(e)** With the aid of these auxiliary verbs, it is possible to convey the following senses:

- Present perfect.
- Past perfect (aka pluperfect).
- Future perfect.
- General statements and eternal truths.
- Inception.

Present Perfect. (a) With first and second person forms of auxiliary verbs constructed from *√as*¹⁶⁹ following a past passive participle, as men-

¹⁶⁸ For derivatives of *√as* and others, see Table 7 in the “Tables” section.

¹⁶⁹ Note that the third person of the present tense of *√as* is not used in this way, except for *atthi* and *santi* as emphatic and indefinite sentence initials (Hendrik-

tioned above, an emphasized present perfect is to be understood (e.g. *katapuññosi tvaṃ, ānanda, padhānāmanuyuñja, khippaṃ hohisi anāsavo* – “You have done merit, Ānanda, practice diligently; it shall come to pass quickly that you will be without influxes,” DN II: 60–1 [DN 16]; Warder, 1963/2001: 233–4). **(b)** These auxiliary verbs may be dropped when the respective pronouns are used as noun substitutes and possibly also as adjectives modifying a noun (e.g. *amhā āgatā* – “We have come”; *iti mama ca manopānidhi, ime ca sattā itthattaṃ āgatā* – “and because of my mental resolve, these beings here have come to this world,” DN I: 9 [DN 1];¹⁷⁰ Warder: 234). **(c)** The past participle + *hoti* (from *√hū*) expresses the same sense (e.g. *so ārāmaṃ gato hoti* – “He has gone to the monastery”; Gair & Karunatilake, 1998: 171). **(d)** Present participle *samāna* (from *√as*) also communicates an emphasized present perfect (e.g. *so [...] pabbajito samāno* – “he [...] having gone forth”; Warder: 234). **(e)** The perfective sense of past and future time may be expressed by derivatives of *√hū* (as in a narrative) and present time by derivatives of *√as* (as in direct speech and dialogue); *hoti* usually relates the historical present (Warder: 235).

Past Perfect (aka Pluperfect). **(a)** Constructions with *tena samayena* (“at that time”) or *tasmiṃ khaṇe* (“at that moment”) + past passive participle + auxiliary verb formed from *√hū* (i.e. *hoti* etc.) express the past perfect (e.g. *tena kho pana samayena kūṭadanto [...] divāseyyaṃ upagato hoti* – “At that time, Kūṭadanto [...] had approached his day bed,” DN I: 59 [DN 5]) or past continuous aspect (past of “to be”; i.e. “was” + present passive participle; e.g. “I was watching”; Hendriksen, 1944: 69–71; Warder, 1963/2001: 233).¹⁷¹ **(b)** Without *tena-samayena* constructions (not invariably present), *ahosi* plays the same role as *hoti* with it (Gair & Karunatilake, 1998: 171; Hendriksen: 74; Warder: 235–6). **(c)** A past passive participle + the present participle *samāna*, introduced already further above, also appears to be

sen, 1944: 79; cf. Geiger, 1916/1956: 203; Warder, 1963/2001: 233–4).

¹⁷⁰ Considering the larger context of this passage, a translation with the past perfect would also seem warranted (i.e. “[...] these beings here had come [...]).

¹⁷¹ Such phrases of time may also be absent, with the past perfect aspect still being expressed (Hendriksen, 1944: 72).

capable of expressing the past perfect or past perfect continuous aspect (e.g. *anattamanavacanāhaṃ tena bhikkhunā vutto samāno anattamano ahoṣiṃ* – “When [or ‘while’] I had been spoken to with irritated utterances by that bhikkhu, I became irritated,” AN II: 5 [AN 2.15]).

Future Perfect. (a) A future perfect sense is to be understood if *bhavissati* (the future form of *√hū*) is preceded by a past passive participle, expressing the sense of “might have,” “would have,” “will have” (e.g. *gato bhavissati* – “He will have gone”; Bubenik, 1998: 105; Gair & Karunatillake, 1998: 171), but the meaning does not necessarily have to be future, as in English “he will have gone by now” (Gair & Karunatillake: 171). **(b)** A future passive participle + *bhavissati* may also express such significance but also implies that the action should or must be done (e.g. *maggo kho me gantabbo bhavissati* – “The path will have to be trodden by me,” DN III: 112 [DN 33]; Warder, 1963/2001: 236; Gair & Karunatillake: 172).

General Statements and Eternal Truths. Auxiliary verbs formed from *√hū* (e.g. *hoti*, *samāna*), usually in sentences beginning with *idha* (“here”), can also express general statements and eternal truths; these constructions frequently carry a hypothetical sense and may also indicate that one thing simply precedes another in time (e.g. [with future passive participle + *hoti*] *idhāvuso, bhikkhunā kammaṃ kātabbaṃ hoti* – “Here [also ‘supposing,’ ‘whenever’] some work has to be done by a bhikkhu,” DN III: 112 [DN 33]; Hendriksen, 1944: 75; Warder, 1963/2001: 237–8).

Inception. (a) The notion of inception might be expressed by the combination of a participial form with the past of the verb *tiṭṭhati*¹⁷² (“to stand”; e.g. *atho kho āyasmā ānando [...] rodamāno aṭṭhāsi* – “Then Ā. Ānanda started weeping [or ‘burst into tears’],” DN II: 60 [DN 16]; Bubenik, 1998: 106). **(b)** Warder (1963/2001: 238), Geiger (1916/1956: 204) and Oberlies (personal communication, February 2, 2021) seem to differ on this point, taking it to be expressive of the continuous aspect; Geiger notes, however, that the literal meaning of *tiṭṭhati* “can still be distinctly felt,” at least for the example he quotes.

¹⁷² This form is derived from *√thā*.

Particles (*nipātā*)

(a) A particle (*nipāto*) is not in need of grammatical transformation, and although its contribution for the syntax might appear insignificant at times, they feature prominently as it relates to the sentence's sounding and rhythm (Collins, 2006: 121, 123). (b) Circa 200 particles exist (Duroiselle, 1906/1997: 128). (c) Kacc 221 gives the following examples: *yathā* ("as," "like"), *tathā* ("thus," "so"), *evaṃ* ("thus"), *khalu* ("indeed"), *kho*, *tatra* ("there"), *atho* ("also," "likewise"), *atha* ("and further," "then"), *hi* ("indeed," "because"), *tu* ("however"), *ca* ("and"), *vā* ("or"), *vo* ("to you"), *haṃ* ("hey!"), *abhaṃ*, *alaṃ* ("enough"), *eva* ("just," "even," "only"; emphatic particle), *ho* ("hello!"), *aho* (exclamation of surprise), *he* ("hey!"), *ahe* (exclamation of surprise), *re* (exclamation of contempt), *are* ("hey!"). (d) With slight modifications, the following was gleaned mainly from Collins (pp. 121–3), Duroiselle (p. 129) and Perniola (1997: 133), if not otherwise indicated.

Kinds of Particles and Usage

1. Conjunction:

- i. Copulative (*samuccayo*): *ca* ("and"), *pi* ("also"), *atha* ("then").
- ii. Disjunction (*vikappanaṃ*): *vā*, *udāhu* (both "or"; e.g. *bhikkhū vā bhikkhunī vā* – "bhikkhus or bhikkhunis").
- iii. Adversative or filler (*pūraṇaṃ*): *atha*, *atho*, *assu*, *ā*, *enaṃ*, *kahaṃ*, *kīva*, *khalu*, *kho*, *carahi*, *tato*, *naṃ*, *pana*, *yagghe*, *yathā* (all "as"), *vata*, *vatha* etc., many of which can be translated as "then," "indeed," "certainly" etc.
- iv. Subordinate: *sace*, *yadi* (both "if"), *yatra hi nāma* ("inasmuch as," "inasmuch that").¹⁷³

(a) Never used as sentence initials are *ca*, *vā*, *yadi*, *sace*, *ce* (last three-mentioned mean "if"), *atha*, *atho* (Duroiselle, 1906/1997: 129), although

¹⁷³ The future is often used in the sense of the aorist in sentences with *yatra hi nāma* and *kathaṃ hi nāma* (Oberlies, 2019: 448, f.n. 3; see the section "Future Indicative").

phrases and sentences may be joined by copulative, disjunctive etc. particles – next to other uses than that (Warder, 1963/2001: 117–8). **(b)** *Ca* or *vā* may follow both words or the last in a series (DOP II, s.v. “*ca*”).

2. Negation, prohibition (*paṭisedho*): *na*, *no*, *mā*, *a*, *alam*, *halam* (e.g. *nāham tatra gacchāmi* – “I don’t go there”).
3. Adverbs (*bhāvanapumsakaṃ* or *kriyāvisesaṇaṃ*).

Adverbs can be formed with suffixes added to pronominal or nominal stems and from numerals; they may also be constructed with certain grammatical cases (Kacc 247–250, Collins, 2006: 124; Duroiselle, 1906/1997: 78–9):

- Time: *dā*, *dāni*, *rahi* (e.g. *karahi*, *kadā* – “when”; *idāni* – “now”).
- Locality (ablative and locative sense): *to*, *tra*, *tha*, *dha*, *dhi*, *ha*, *haṃ*, *hiṃ*, *jja*, *jju* (e.g. *tatra* – “there”; *atra* and *idha* – “here”; *aññatra* – “elsewhere”; *ito* – “from this place,” “hence”; *kuhiṃ* – “where?”; *tahiṃ* and *tahaṃ* – “in that place”; *ajja* – “today”; Kacc 571).
- Manner: *thā*, *vā*, *vaṃ*, *thaṃ*, *ti* (e.g. *tathā* – “thus”; *evaṃ* and *iti* – “thus,” “in this manner”).
- Ablative suffix: *to* (e.g. *abhitto* – “near”; *sabbato* – “everywhere”).
- Ablative suffix: *so* (e.g. *yoniso* – “from its origin,” “profoundly,” “properly”).
- Instrumental suffix (of *as*-stems): *sā* (e.g. *balasā* – “forcibly”).

From numerals (Duroiselle, 1906/1997: 66–7):

- Ways, times, fold: *dhā* (e.g. *ekadhā* – “once”).
- Times: *khattuṃ* (e.g. *sattakkhattuṃ* – “seven times”).
- Times, fold: non-suffix *guṇa* (like *dhā*; e.g. *dasaguṇaṃ* – “ten times”). It usually takes the neuter in *aṃ*, but in the sense of “fold,” it would be an adjective and declined accordingly.
- Collective nouns and adjectives: *ka* and *ya* (e.g. *catukka* – “fourfold,” “consisting of four”; *dvaya* – “consisting of two,” “a pair”).
- Distributive: *so* (e.g. *ekaso* – “one by one”).

Grammatical Cases (Collins, 2006: 124; Duroiselle, 1906/1997: 127–8):

- Accusative (e.g. *dukkhaṃ* – “with difficulty”).
- Instrumental (e.g. *dharmena* – “rightly,” “according to *dharma*”).
- Dative (e.g. *ajjatanāya* – “today”).
- Ablative (e.g. *pacchā* – “behind”).
- Genitive (e.g. *cirassa* – “after a long time,” “at last”).
- Locative (e.g. *bāhire* – “outside”).

All oblique cases can be used adverbially (Collins, 2006: 124), though the accusative is most commonly employed to form adverbs (Perniola, 1997: 131).

4. Interjections (Perniola, 1997: 134). They may express emotions such as joy, sadness, anger or stand for words which call for attention (e.g. *aho* – for surprise or consternation; *je* – used to address low standing women; *iṅgha* – “Come on!”, “Look here!”, *nūna* – “Is it then?”).

Prepositions and Prefixes (*upasaggā* or *upasārā*)

Kinds of Prepositions

(a) There are twenty prepositions or prefixes – generally prefixed to roots and *kita* nouns,¹⁷⁴ although quite a number can be used independently too (Thitzana, 2016: 323; others limit their number to exactly five; see below). (b) The following list was grafted mainly from Kacc 221, with explanations from Thitzana (pp. 324–40) and Ānandamaitreya (1993/2012: 97), if not indicated otherwise:

- *a/ā*: till, up to, upward, back, intensifier, signifies opposite meaning of root to which it is affixed (e.g. *āgacchati* – “He comes”; *akkosati* – “He insults”).
- *abhi*: being special, specially, distinctive, beyond, very much, predominantly, toward, wrongly, recklessly, to, unto, facing, opposite, up, above (e.g. *abhigacchati* – “He goes toward”).
- *adhi*: being lord over, up, over, superior, supreme, to attain, deeply, excessively, with regard to (e.g. *adhigacchati* – “He goes over,” “He attains”).
- *anu*: following, again and again, alongside, in compliance with, suitable, small, after, repeatedly, behind, inferior, favorable, in detail (e.g. *anugacchati* – “He follows”).
- *apa*: away from, off, negatively, wrongly (e.g. *apagacchati* – “He goes away from”).
- *api*: above, cover up, close on (e.g. *apidhānaṃ* – “a cover,” “a lid”).
- *ati*: over, much, excessively, beyond, across (e.g. *atikkamati* – “He passes over”).
- *ava*:¹⁷⁵ down, inside, contemptuously, mean, away, off, around¹⁷⁶ (e.g. *okkamati* – “He descends”).

¹⁷⁴ See chapter “*Kita* and *Taddhita* Affixes.”

¹⁷⁵ It may change to *o* before consonants; see also the section “Consonantal Sandhi (*byañjanasandhi*),” pt. 10.

¹⁷⁶ The three last mentioned were taken from Nārada (n.d.: 120).

- *du*: ill, inauspicious, bad, without, lack of, unwholesome, poor in nature, being difficult (e.g. *dujjana* – “a bad man”).
- *ni*: down, out, away, into, opposite of, without, lack of (e.g. *nisīdati* – “He sits down”).
- *nī*: out, off, to remove (e.g. *niggacchati* – “He goes out”).
- *pa*: forth, specifically, up, away, the source, successively, chief, noble, clear, clean, inside, intensifier (e.g. *pabbajati* – “He goes forth”).
- *parā*: opposite, again and again, continuously, wrongly (e.g. *parābhavati* – “He is ruined”).
- *pari*: round, insulting, dominant, overall, completely, altogether¹⁷⁷ (e.g. *paribhavati* – “He scolds”).
- *pati/paṭi*: again, in response to, in return, instead of, in exchange for, against, on behalf of, similar to, being suitable, minor parts or limbs of the body, opposite, back, representing, similar to, afterward,¹⁷⁸ intensifier (e.g. *paṭipucchati* – “He questions in return”).
- *saṃ*: together, well, oneself, in union, unitedly, self, again and again, intense, intensifier (e.g. *saṅgacchati* – “He meets”).
- *su*: good, well, auspicious, being easy, abundance, intensely, firmly, intensifier (e.g. *sugati* – “good [or ‘happy’] destination [after death]”).
- *u*: up, upward, above, wrong, opposite of, intensifier (e.g. *uggacchati* – “He goes up,” “He rises”).
- *upa*: to, close by, toward, near, subordinate, firmly, allegation, over, to exceed, intensifier (e.g. *upagacchati* – “He goes to,” “He goes near”).
- *vi*: away, off, variously, in different ways, transformed, without, out, specially, being off, separated, apart (e.g. *vigacchati* – “He goes away”).

¹⁷⁷ Last two-mentioned meanings have been taken from PED (s.v. “*pari*”).

¹⁷⁸ Pd I (p.5) attests that *paṭi* can mean “afterward”: *paṭīti vā ayaṃ saddo pacchāti etassa atthaṃ bodheti* – “or this word ‘*paṭi*’ reveals the meaning of ‘afterward.’”

Usage. (a) An *upasaggam* (“addition”) adds to verbs, participles, absolutes, infinitives, nouns or adjectives semantically or otherwise, specifying, emphasizing or altering their meaning – it may be added to those (Ānandamaitreya, 1993/2012: 97), but Collins (2006: 125) mentions that five are also common as independent words and prepositions: *anu* (+ accusative), *apa* (+ ablative), *abhi* (+ accusative), *ā* (+ ablative), *paṭi* (+ accusative). (b) They usually modify or specify the meaning of the root, intensifying it (classification name: *dhātvatthavisesako* – “that which modifies [or ‘enhances’] the meaning of the root”) and sometimes even reversing its significance altogether (classification name: *dhātvatthabādhako* – “that which debars the meaning of the root”). (c) At other occasions, they add no meaning whatsoever – or just little – to the original sense of the root (type name: *dhātvatthānuvattako* – “that which keeps on alongside the meaning of the root,” Collins: 125; Thitzana, 2016: 323; Tun, 2019: 3). (d) Adverbs (e.g. *antarā* – “in between,” “meanwhile”), as well as absolutes (e.g. *nissāya* – “near”), adjectives (e.g. *samīpa* – “near,” “close”) and nouns (in oblique cases) may operate as prepositions proper. (e) Even verbal forms may carry the sense of a preposition (e.g. *sahita* – “with”; Perniola, 1997: 133; Collins: 126).

Compounds (*samāsā*)

(a) Compound words of related meaning are “combinations of two or more words that function as a single unit of meaning” (cf. Kacc 316; Yindee, 2018: 92) – the literal meaning of the word *samāso* is “putting together” (Rūp: 90; Deokar, 2008: 286). (b) A characteristic of compounds is that the separated meanings of their members unite to become one (Deokar: 287); however, the following contrasting statement has to be taken into consideration:

The Indian compounds are not so much felt as a unit as for instance the compounds in the western European languages; the first member of the compound has often in some degree preserved its syntactic independence. This appears plainly from the cases, by no means rare, in which a word outside the compound is syntactically connected with the first member only [as will become apparent to some degree in the course of this chapter] (Hendriksen, 1944: 145).

(a) Declinable stems are very often worked into compounds, and indeclinables and prefixes may also unite with them – some compounds are even entirely made up of indeclinables. (b) The words as initial members stand usually in their uninflected stem form, the case endings having been elided,¹⁷⁹ and may be either singular or plural (Kacc 317; Collins, 2006: 130; Duroiselle, 1906/1997: 129; Warder, 1963/2001: 77). (c) To determine their numbers, the context has to be taken into consideration; oftentimes, commentarial explanations are of great help too, even for the beginner or intermediate student, since they tend to be succinct and straightforward. (d) Some specifics on formation (Perniola, 1997: 158):

- Some stems in *a* → *i* / $\sqrt{bhū}$ and \sqrt{kara} and their derivatives.
- *ū* [masculine stems] → (Ǟ) (e.g. *vññujātika* → *viññujātika*).
- *ā*, *ī*, *ū* [feminine stems] → (Ǟ) in a few instances (e.g. *mettācitto* → *mettacitto*).

¹⁷⁹ An exception would be: *parassapadam* (“active voice marker”).

- *as* [neuter stems] → *o* [except *rājas*] (cf. Kacc 183).
- *go* [stem] → *gav*/ __ vowel (*gavassaṃ* – “cattle and horses”).
- *go* [stem] / __ consonant (e.g. *goghātako*).
- Stems formed with the *kita* affix *ratthu* (*r*-stem) commonly stand with the *u* (e.g. *piturakkhita* – “protected by the father”).
- *Ratti* → *ratta* [occasionally].¹⁸⁰
- The adjective *mahanta* takes the form *mahā* or *maha* in the case when an antecedent consonant is reduplicated (Kacc 330).

(a) As the first member may stand: substantive nouns, adjectives, pronouns, numerals, adverbs and verbal forms (participles and nouns derived from verbs¹⁸¹ can form compounds but finite verbs cannot; Warder, 1963/2001: 77). (b) They are considered as one word and as being of one individual inflection (Kacc 317; Collins, 2006: 129). (c) Compound words may carry an idiomatic significance, and the usual sandhi rules apply (Perniola, 1997: 160; Warder: 77). (d) Possessive adjectives can also be formed from compound words with the addition of affixes *ika*, *iya*; they are similar in function to the English suffix -ed, as in “kindhearted,” being implemented to change substantival compounds into adjectives (cf. Duroiselle, 1906/1997: 137; Collins: 135).

Kinds of Compounds

1. Copulative (*dvandaṃ*).
2. Dependent determinative (*tappuriso*).
 - i. Accusative-dependent determinative (*dutiyātappuriso*).
 - ii. Instrumental-dependent determinative (*tatiyātappuriso*).
 - iii. Dative-dependent determinative (*catutthītappuriso*).
 - iv. Ablative-dependent determinative (*pañcamītappuriso*).
 - v. Genitive-dependent determinative (*chaṭṭhītappuriso*).
 - vi. Locative-dependent determinative (*sattamītappuriso*).

¹⁸⁰ Exceptions are *pitā* and *mātā* in copulative compounds.

¹⁸¹ The present participle and the agent noun are just rarely employed for compounds in the Pāli language (Hendriksen, 1944: 146).

- vii. Descriptive determinative (*kammadhārayo*).¹⁸²
- Attribute-word-first descriptive determinative.
 - Attribute-word-second descriptive determinative.
 - Both-attribute-word descriptive determinative.
 - Resemblance-attribute-word descriptive determinative.
 - Effectual-first-word descriptive determinative.
 - Emphasis-first-word descriptive determinative.
 - Ku-particle-first-word descriptive determinative.
 - Na-particle-first-word descriptive determinative.
 - Prefix-first-word descriptive determinative.
 - Numerical descriptive determinative (*digukammadhārayo*).
- iii. Attributive or possessive (*bahubbīhi*).
3. Adverbial (*abyayībhāvo* or *avyayībhāvo*).

Copulative (*dvandam*)

Formation. (a) The members of this compound class (lit. “twin” or “pair”) are simple collocations, being connected with the copulative particle *ca* (“and”) or disjunctive *vā* (“or”; Kacc 329; Collins, 2006: 131; Deokar, 2008: 304; Warder, 1963/2001: 97). (b) The individual members are to be understood as standing in the same case (Deokar: 304). (c) The meaning of both terms within a copulative compound are of equal value, with neither of them being predominant (Deokar: 305).

Usage. (a) Copulative compounds may operate as substantive nouns, adjectives (in which case they become attributive compounds) and as adverbs. (b) They may stand as a collective substantive and be found in the neuter singular (Kacc 321–323) or may designate two or more items, being then inflected in the plural of the actual gender of the compound’s last member (Thitzana, 2016: 454). (c) Collins (2006: 131) informs us that the last member of these compounds can also be declined as singular

¹⁸² See below for the Pāḷi terms of the respective compound types.

in the gender of the last member (apart from the neuter form) – he cites *dhammavinayo*. **(d)** Warder (1963/2001: 97) states that “the more important or leading object, if any, sometimes occupies the second position, which is normally the dominant position in Pali”; the Waxing Syllable Principle¹⁸³ may influence the sequencing as well (*dhammavinayo* as a viable example with a syllable count of 2 + 3; Anālayo, 2009: 741). **(e)** When translating into English, one may reverse the positioning as found in the Pāli compound (e.g. *mātāpitaro* – “father and mother”; Warder: 97). **(f)** Words can also be found repeated in this class (e.g. *punappunam* – “again and again”; Collins: 132).

Dependent Determinative (*tappuriso*)

Formation. **(a)** The first member of this type is a noun in any oblique case (i.e. all but the nominative and vocative) and qualifies the last member, which may be a predominant ordinary noun, action noun or agent noun (e.g. *arañṇagato* [accusative relation] – “gone to the forest”; Kacc 327; Deokar, 2008: 294; Perniola, 1997: 167; Thitzana, 2016: 457–8). **(b)** When case endings are not elided, the compound is called “non-elision dependent determinative” (*aluttatappuriso*; Duroiselle, 1906/1997: 131). **(c)** At times, the usual first member is placed last (e.g. *rājahaṃso* – “the king of swans,” not “the swan of kings”; Duroiselle: 132). **(d)** The last member determines gender and number (Buddhadatta, 1937/1997: 48). **(e)** In its uncompounded state, the members of a dependent-determinative compound would be in different cases (Collins, 2006: 133). **(f)** They are also named according to the implicit case ending of the first member (e.g. *saṃsare + dukkha* → *saṃsāradukkha*; it is a type called a locative-dependent determinative [*sattamītappuriso*] because *saṃsāra* is to be understood as standing in the locative case;¹⁸⁴ Thitzana: 458–9). **(g)** These are the different classes of the dependent-determinative compound type (Kacc 327; Duroiselle: 131–2; Thitzana: 457–9; Yindee, 2018: 95–6):

¹⁸³ See chapter “Sentence Structure and Syntax” for details.

¹⁸⁴ See chapter “Grammatical Case (*vibhatti*).”

- Accusative-dependent determinative (*dutiyā tappuriso*; e.g. *apāyagato* [*apāyaṃ gato*] – “the one who has gone to the realms of [non-eternal] perdition”).
- Instrumental-dependent determinative (*tatiyā tappuriso*; e.g. *issarakataṃ* [*issarena kataṃ*] – “done by a ruler [or ‘deity’]”).
- Dative-dependent determinative (*catutthī tappuriso*; e.g. *kathinadussaṃ* [*kathinassa dussaṃ*] – “a *kathina* robe,” “a robe for *kathina*”).
- Ablative-dependent determinative (*pañcamī tappuriso*; e.g. *methunāpeto* [*methunā apeto*] – “abstinence from sexual intercourse”).
- Genitive-dependent determinative (*chaṭṭhī tappuriso*; e.g. *rājaputto* [*rañño putto*] – “the king’s son”).
- Locative-dependent determinative (*sattamī tappuriso*; e.g. *saṃsāradukkhaṃ* [*saṃsāre dukkhaṃ*] – “the suffering of transmigration [as it relates to rebirths]”).

Usage. (a) A dependent-determinative compound may function as an adjective (in which case it becomes an attributive compound), a noun or an adverb (Perniola, 1997: 166). **(b)** The most common occurrences of this type of compound are of the genitive relation (e.g. *bhikkhusaṅgho* – “the order of bhikkhus”; Duroiselle, 1906/1997: 131–2). **(c)** An example of a verbal form is: *manasikaraṇīya dhammā* – “things to be kept in mind” (Perniola: 169).

Descriptive Determinative (*kammadhārayo*)

Formation. (a) Descriptive-determinative compounds are themselves classified ultimately as dependent-determinative compounds. **(b)** In their uncompounded state, the parts of this compound class would stand in the same case relation, unless the first member is an adverb, becoming thus indeclinable (Kacc 324; Collins, 2006: 132; Deokar, 2008: 295). **(c)** The last feminine member sometimes takes on the masculine gender, and if both are feminine, the first becomes masculine (Kacc 332; Buddhaddatta, 1937/1997: 41; Duroiselle, 1906/1997: 134). **(d)** The adjective *mahanta* takes the form *mahā* or *maha* if the antecedent consonant is reduplicated (Kacc

330). **(e)** The different classes of this type of compound are as follows (Deokar: 298; Duroiselle: 132–4; Yindee, 2018: 92–4):

- Attribute-word-first descriptive determinative (*visesanapubbapadakkammadhārayo*): The first member determines the second (e.g. *mahāpuriso* – “a great man”).
- Attribute-word-second descriptive determinative (*visesanuttarapadakkammadhārayo*): The second member determines the first (e.g. *buddhaghosācariyo* – “the teacher Buddhaghosa”).
- Both-attribute-word descriptive determinative (*visesanobhayapadakkammadhārayo*): Both members are determinative (e.g. *andhabadhiro* – “[He is] blind and deaf”).
- Resemblance-attribute-word descriptive determinative (*visesano-pamapadakkammadhārayo*): Both members are in the same case (e.g. *dibbacakkhu* [*dibbaṃ iva cakkhu*] – “the divine eye”).
- Effectual-first-word descriptive determinative (*sambhāvanapubbapadakkammadhārayo*): The initial member indicates the origin of the second, with the words *iti* (“thus,” “namely”), *saṅkhāto* (“reckoned,” “called”), *hutvā* (“having been”) being tacitly understood to convey the compound’s entire gamut of meaning (e.g. *khattiyamāno* [*khattiyo iti māno*] – “the conceit of a warrior,” “the conceit ‘I am a warrior’”).
- Emphasis-first-word descriptive determinative (*avadhāraṇapubbapadakkammadhārayo*): **(a)** The first word modifies a general term. **(b)** Traditionally, the word *eva* (“just,” “even”) is inserted but, again, has to be understood just implicitly. **(c)** When translating into English, this type of compound ought to be translated in the genitive relation (e.g. *śīladhanaṃ* [*śīlaṃ eva dhanaṃ*] – “the wealth of morality”).
- Ku-particle-first-word descriptive determinative (*kunipātapubbapadakkammadhārayo*): As the name suggests, the first member is particle *ku* (e.g. *kuputto* – “a bad son”; *ku* may → *ka* before a consonant).

- Na-particle-first-word descriptive determinative (*nanipātapubba-padakammadhārayo*): First member is *a* or *na* before consonants and *an* before vowels (e.g. *anariyo* – “ignoble”).
- Prefix-first-word descriptive determinative (*pāḍipubbapadakammadhārayo*): First members are *pa*, *pā* or any other prefix (e.g. *pamukkho* – “facing,” “chief”; *abhidhammo* – “the higher teaching”).

(a) The members may be substantive noun + substantive noun, adjective + substantive noun, adverb + substantive noun, adverb + adjective (Perniola, 1997: 163). (b) If a comparative meaning is intended, the descriptive word comes last (Buddhadatta, 1937/1997: 40). (c) Nouns in apposition are considered descriptive-determinative compounds too (e.g. *vinayaṭṭhakaṃ* – “the *vinaya* basket”; Duroisselle, 1906/1997: 134; Perniola: 164). (d) A numeral as first-member adjective, qualifying a noun, is considered a subclass of the descriptive-determinative compounds called “numerical descriptive determinative” (*digukammadhārayo*; Kacc 325; Collins, 2006: 132; Warder, 1963/2001: 274; Perniola: 165).

Usage. Compounds of this tier may be used as substantive nouns, adjectives (in which case they become attributive compounds) or adverbs (Perniola, 1997: 164).

Numerical descriptive determinative (*digu*)

Formation. (a) As mentioned just above: “A numeral as first-member adjective, qualifying a noun, is considered a subclass of the descriptive-determinative compounds called ‘numerical descriptive determinative’ (*digukammadhārayo*; Kacc 325; Collins, 2006: 132; Deokar, 2008: 299–300; Warder, 1963/2001: 274; Perniola, 1997: 165).” (b) The numerical compounds are themselves ultimately classified as dependent-determinative compounds, as is the case for descriptive-determinative compounds as well (Kacc 326; Deokar: 299). (c) There are two classes of this type (Duroisselle, 1906/1997: 134):

- Collective numerical (*samāhāradigu*): takes the neuter singular form (e.g. *dvirattaṃ* – “two nights”; Kacc 321–322).

- Non-collective numerical (*asamāhāra*): stands in the plural (e.g. *tibhavā* – “three states of existence”).

Usage. The usage is seemingly the same as above. When used as adjectives, they become attributive compounds (Duroiselle, 1906/1997: 135).

Attributive or Possessive (*bahubbīhi*)

Formation. (a) The attributive compound is a compound turned adjective (cf. Perniola, 1997: 169); all of the compounds discussed above (*dvandaṃ*, *tappuriso*, *kammadhārayo*, *digu*, *abyayībhāvo*) become attributive compounds when used as adjectives. **(b)** Being used as adjectives, they must agree with the noun they qualify in gender, number and case (e.g. *jitindriyo* [nominative]¹⁸⁵ *samaṇo* – “The ascetic by whom the [sense] faculties have been subdued” (Kacc 328; Duroiselle, 1906/1997: 135; Thitzana, 2016: 459–62). **(c)** So, a feminine noun, for example, at the end of the compound becomes masculine if it qualifies a masculine form (Kacc 331; Collins, 2006: 135). **(d)** Without changing the meaning, the determining word within the compound may be situated first or last (Duroiselle: 137) – with the initial vowel sometimes undergoing strengthening in that (Collins: 135). **(e)** Oftentimes, the word which is determined by the attributive compound is only implicitly understood and not expressed (e.g. *jitindriyo* – “[he] who has subdued [sense] faculties”; Duroiselle: 136). **(f)** Attributive compounds are capable of standing in any case relation (except the vocative) to a word which they modify, and it is according to this flexibility that the different kinds – seven in total – are formed (Kacc 328; Duroiselle: 136; Thitzana: 460–1; Yindee, 2018: 97–8):

- Nominative attributive compound (*paṭhamābahubbīhi*).
- Accusative attributive compound (*dutiṇābahubbīhi*).

¹⁸⁵ It may get a little confusing, but an attributive compound agrees in grammatical case with the word it modifies yet may be classified differently according to the function it has; thus, *jitindriyo* is in the nominative but classified as an instrumental attributive compound (*tatiṇābahubbīhi*), according to its function as an instrumental case (see the classification system within this section).

- Instrumental attributive compound (*tatiyābahubbīhi*; e.g. *jitindriyo samaṇo* [i.e. *jitāni indriyāni anena samaṇena*] – “The ascetic by whom the [sense] faculties have been subdued”).
- Dative attributive compound (*catutthībahubbīhi*).
- Ablative attributive compound (*pañcamībahubbīhi*; e.g. *niggatajano gāmo* [i.e. *asmā gāmasmā janā niggatā*] – “the village from which people have departed”).
- Genitive attributive compound (*chaṭṭhībahubbīhi*).
- Locative attributive compound (*sattamībahubbīhi*; e.g. *sampanna-sasso janapado* [i.e. *sassāni sampannāni yasmiṃ janapade*] – “the country in which rice is abundant”).

(a) The attributive compounds do not constitute a distinct class but are part of the dependent-determinative compounds. (b) They virtually always follow the *a*-stem declensions¹⁸⁶ (Collins, 2006: 135; Yindee, 2018: 97). (c) The feminine case endings of initial members are dropped (Kacc 332; Duroiselle, 1906/1997: 137).

Usage. (a) As indicated above, predominance in determining the collective meaning of attributive compounds lies in a word external to it (*aññapadattho* – “the meaning of the other word”); i.e. an external word determines the ultimate meaning of an attributive compound (e.g. *jitindriyo* [attributive compound] *samaṇo* [*aññapadattho*] – “The ascetic by whom the [sense] faculties have been subdued”; Kacc 328; Deokar, 2008: 301–2; Thitzana, 2016: 459–61; Yindee, 2018: 97). (b) This type of compound is mostly (but not invariably) to be rendered by means of a relative clause – one would then need to translate with such relative pronouns as “who,” “that,” “which,” as illustrated above (cf. Duroiselle, 1906/1997: 135; cf. Warder, 1963/2001: 137).

Adverbial (*abyayībhāvo* or *avyayībhāvo*)

Formation. (a) The first member of this compound type is an indeclinable (*upasaggo* or *nipāto*) in the leading or predominant role (e.g. *upanagaram*

¹⁸⁶ See Table 3 in the “Tables” section.

[with *upasaggo*] – “near town”; *yathāvuḍḍhaṃ* [with *nipāto*] – “according to [or ‘by’] age”; Kacc 319; Collins, 2006: 134; Deokar, 2008: 291–2). **(b)** A declinable word form is made indeclinable by means of these adverbial compounds (Deokar: 291). **(c)** The last member’s *ā* is replaced by neuter *aṃ*, and other long vowels are shortened (Kacc 342; Thitzana, 2016: 492). **(d)** At times, ablative and locative case endings are kept, although at the same time the form in *aṃ* is also mostly encountered (Duroiselle, 1906/1997: 135). **(e)** Compounds which do not contain any indeclinable but function adverbially are also termed “adverbial compound” (*avyayībhāvasamāso*). **(f)** This class is usually fashioned by taking the accusative singular neuter ending in *aṃ*, being then indeclinable (Kacc 320, 341; Thitzana: 491–2).

Usage. An adverbial compound functions as an adverb and if used as an adjective, becomes an attributive compound (e.g. *itthannāmo [...]* *khattiyo* – “such and such [...] a warrior,” AN III: 2 [AN 3.13]; Buddhadatta, 1937/1997: 58; Deokar, 2008: 291; Duroiselle, 1906/1997: 135).

Complex Compounds

(a) The above-explained compounds are themselves capable of standing as initial or last members of another compound. **(b)** It is also possible that two compounds are brought together to coalesce into a new one, which itself, again, may become a member of yet another compound – this process may be carried on thus almost ad infinitum. **(c)** These complex compounds are in the main used as attributive compounds; i.e. relatively. **(d)** Later Pāli texts feature these longer compounds frequently (Duroiselle, 1906/1997: 138). **(e)** To give an example for a one-word complex dependent-determinative compound in the instrumental singular feminine: *aparimitakālasañcitapuññabalanibbattāya* (*aparimite kāle sañcitassa puññassa balena nibbattāya* – “arisen by the power of [spiritual] merit accumulated during an immense period of time”). Duroiselle (p. 138) resolves the compound thus:

- *aparimitakālasañcitapuññabala*: dependent-determinative compound determining *nibbattāya* (“arisen by”).

- *aparimitakālasaṅcītapuṇṇa*: descriptive-determinative compound determining *bala* (“power”).
- *aparimitakālasaṅcita*: descriptive-determinative compound determining *puṇṇa* (“merit”).
- *aparimitakāla*: descriptive-determinative compound determining *saṅcita* (“accumulated”).
- *aparimita* (*a* + *parimita* – “measureless”): descriptive-determinative compound determining *kāla* (“time”).

Kita and Taddhita Affixes

(a) Some of the details on word formation as it happens in the Pāḷi language have already been given in the chapters “Nouns (*nāmāṇi*)” and “Verbs (*ākhyātāṇi*),” and the rules which show what changes may occur when words and their constituent elements unite were laid out in the chapters “Sandhi” and “Morphology.” (b) In this chapter, however, synopses and a detailed listing of the *kita* and *taddhita* affixes are provided, in addition to explanations and copious examples thereto.

General Characteristics

(a) Perniola (1997: 136) notes pertinently: “The distinction between primary and secondary suffixes is not of great importance since the same suffixes may be used both as primary [i.e. *kita*] and as secondary [i.e. *taddhita*] [...]” (b) “The rules of sandhi and assimilation are regularly applied” (Duroiselle, 1906/1997: 141). (c) The affixes with *ṇ* in front denote that the root undergoes changes of vowel gradation – they are called *kārita* affixes by Kaccāyana (Kacc 621). (d) The suffix *inī* is employed after *pati*, *bhikkhu*, *rāja* and other *i*-ending nouns to construct the feminine (Kacc 240; cf. Duroiselle: 58).

***Kita* Affixes Synopsis**

(a) Prefixes, roots themselves or special affixes are appended to roots, which forms participles, absolutes, infinitives, adjectives, action nouns, agent nouns and possessive nouns, in some cases constituting nominal stems which have to undergo further declension to accomplish the full gamut of meaning. (b) These special affixes are called *kitapaccayā* (“primary affixes”) – **bold** in the listing below. (c) In the case of adjectives and substantive nouns, a potential subsequent appending of nominal suffixes may happen (e.g. *√cara* + *a* [*kita* affix] → *cāra* [nominal stem] + *nā* [*ena*] [instrumental suffix] → *cārena* – “with the spy”). (d) Proviso: Kaccāyana includes the affixes of participles, absolutes and infinitives under *kita* affixes but classifies them, obviously, not as nouns (Kacc 601;

Thitzana, 2016: 747). **(e)** Note that all the following *kita* affixes, despite all the nuances they are able to express, carry the sense of agent (Kacc 624; Deokar, 2008: 215).

***Taddhita* Affixes Synopsis**

(a) Another set of special affixes, which are, in turn, appended to the just mentioned *kita* derivatives to form nominal stems,¹⁸⁷ are the so-called *taddhitapaccayā* (“secondary affixes” – plain in the listing below); nominal suffixes, again, can be applied to these (Thitzana, 2016: 747). **(b)** They are mainly responsible for the formation of adjectives and substantive nouns (Duroiselle, 1906/1997: 146).

***Kita* and *Taddhita* Affixes: Listing**

-a/-ṇa: **(a)** This affix forms an extremely large number of derivatives, some of which undergo increase (*vuddhi*)¹⁸⁸ and some of which do not. **(b)** With a near-by object, it may form nouns carrying a future sense (e.g. *nagara* + *√kara* + *ṇa* + *si* [o] → *nagarakāro* – “the [would-be] city planner”; Kacc 654). **(c)** It forms nouns (substantive nouns and adjectives), indicating or standing for:

- Personal names (e.g. *ari* + *√damu* + *a* + *si* [o] → *arindamo* – “the one who subdues the enemy”; Kacc 525 – no increase).
- Action (e.g. *√paca* + *a* + *si* [o] → *pāko* – “the act of cooking”; Kacc 525 – no increase, 529 – increase).
- Doer or agent (e.g. *√cara* + *a* + *si* [o] → *cāro* and *caro* – “a spy”; Kacc 524 – increase).
- Abstract nouns of action (e.g. *√kara* + *a* + *si* [o] → *karo* – “action,” “making”).
- It forms adjectives (e.g. *√kara* + *a* → *kāra* – “doing,” “making”; also *kara* – “causing,” “making”).

¹⁸⁷ This includes pronominal stems.

¹⁸⁸ See chapter “Vowel Gradation” for details.

-a: forms substantive nouns and adjectives, conveying the following:

- Possessiveness (e.g. *paññā + a + si [o] → pañño* – “one having wisdom”; Kacc 370).
- Belonging to (Kacc 352).
- Collection of (Kacc 352).
- Study, knowledge of, knowing (Kacc 352).
- Periods of time (Kacc 352).
- Action.
- Doer or agent.
- Patronymics (Kacc 344).
- Abstract nouns of action (cf. Kacc 361).
- That which is dyed with (Kacc 352).
- The flesh of.
- The locality in which something or someone is or exists (Kacc 352).
- Domain (Kacc 352).
- Devotion (Kacc 352).

-**abha**: forms the names of some animals; the derivation is obscure.

-**aka/-ṇvu**: **(a)** As per Kacc 622, affix *ṇvu* → *aka*. **(b)** The *ṇvu* affix + a causative affix → *ānanaka* (Kacc 641; Thitzana, 2016: 781). **(c)** This affix denotes the doer of an action and forms numerous action nouns (Kacc 527). **(d)** It is capable of expressing a future sense (e.g. *√kara + aka + si [o] → kārako*, as in *kārako vajati* – “The [would-be] doer goes”; Kacc 652).

-**ala**: **(a)** is forming a few nouns of doubtful derivation (e.g. *√kusa + ala + si [o] → kusalo* – “that which is capable of cutting sin,” “meritorious act”). **(b)** These nouns belong to the neuter gender.

-**ana**: **(a)** This affix forms a large number of derivative substantive nouns and adjectives. **(b)** It may be applied in the sense of the present as well as the past (Kacc 650). **(c)** As per Kacc 622, affix *yu* → *ana*. **(d)** After roots ending in *r* and *h*, *ana* → *aṇa* (Kacc 549). **(e)** The *yu* affix + a causative affix → *ānana* (Kacc 641; Thitzana, 2016: 781). **(f)** Affix

yu may, seemingly, also stand untransformed (e.g. $\sqrt{vā} + yu + si$ [$\rightarrow \emptyset$] $\rightarrow vāyu$ – “wind [blowing in past and present]”; Kacc 650). **(g)** It expresses the following:

- Habit, habitual pattern of doing things well, consistent character, ingrained nature (Kacc 533).
- Agent (e.g. *rajoḥaranaṃ* – “the dust remover”; Kacc 548).
- Instrument (e.g. *karaṇaṃ* – “a supporting cause”; Kacc 548).
- A locative sense (e.g. *thānaṃ* – “a place”; Kacc 548).
- Appended after \sqrt{nanda} , it carries an abstract sense and is also taken as a direct object (e.g. $\sqrt{paca} + ana + si$ [*aṃ*] $\rightarrow pacanaṃ$ – “the cooking”; Kacc 533, 546).

-anīya: It is called a *kicca* affix but is included in the *kita* chapter of Kaccāyana (Kacc 545) – an affix of the future passive participle (Kacc 540).

-as: A not very large but important class of words is constructed by means of this affix (e.g. $\sqrt{vaca} + as + si$ [*o*] $\rightarrow vacaso$ – “speech,” “having speech”).

-ava: patronymics (Kacc 348).

-aya: for this, see *ya*.

-ālu: This affix denotes tendency and being of a particular nature (e.g. *dayā* [“sympathy,” “compassion”] + $\bar{a}lu + si$ [$\rightarrow \emptyset$] $\rightarrow dayālu$ – “compassionate,” “the one who is compassionate”; Kacc 359).

-āna: patronymics (e.g. *kacca* [a proper name] + $\bar{a}na + si$ [*o*] $\rightarrow kaccāno$ – “the son [or ‘offspring’] of Kacca”; Kacc 345).

-āṇa: very few derivatives (e.g. \sqrt{kalla} [by assimilation from *kalya*] + $\bar{a}ṇa + si$ [*o*] $\rightarrow kallāṇo$ – “happy,” “blessed with health,” “good”).

-āvī: **(a)** This affix is applied after all roots and is used to denote habit, habitual pattern of doing things well, consistent character, ingrained nature (e.g. *bhaya* + \sqrt{disa} + $\bar{a}vī \rightarrow bhayadassāvī$ – “the one who sees danger,” “the one who is used to seeing danger”; Kacc 527, 532). **(b)** The suffix *inī* is employed after it to construct the feminine (Kacc 240; cf. Duroiselle, 1906/1997: 58).

-*āyana*: patronymics (e.g. *kacca + āyana + si [o]* → *kaccāyano* – “the son of Kacca”; Kacc 345).

-*āyitatta*: expresses a simile or metaphoric resemblance (e.g. *dhūma + āyitatta + si [aṃ]* → *dhūmāyitattaṃ* – “obscuration,” “becoming smoke-like,” as in *dhūmāyitattaṃ vanaṃ* – “the smoky forest”; Kacc 357).

-*bhū*: This is *√bhū* (“to be”). It has generally the meaning denoted by the verb itself (e.g. *abhi + bhū* → *abhibhū* – “mastering,” “conqueror”).

-*bya*: is said to denote “the state of” (e.g. *dāsa + bya + si [aṃ]* → *dāsabyaṃ* – “the state of being a slave,” “slavery”).

-*da*: This is *√dā* (“to give,” “bestow”; e.g. *amata + √da + si [o]* → *amatado* – “the bestower of immortality”).

-*dhā*: is applied to cardinal stems and means “fold,” “ways,” “kinds” (Kacc 397).

-*era*: constructs patronymics; the final vowel of the word is elided (e.g. *samaṇa + era + si [o]* → *sāmaṇero* – “the son [i.e. ‘the disciple’] of the ascetic,” “a novice”; Kacc 349).

-*eyya*: denotes:

- The state or nature of (e.g. *alasa + eyya + si [aṃ]* → *ālaseyyaṃ* – “idleness”).
- Patronymics (e.g. *vinata + eyya + si [o]* → *venateyyo* – “the son of Vinata”; Kacc 346).
- Denotes the nature of, origin and place where a thing is made or a person or animal is reared in (e.g. *pabbata + eyya + si [o]* → *pabbateyyo* – “the one whose place [or ‘abode’] is in the mountains”).
- Fitness, worthiness.

-*ga*: *√gama* (“to go”; e.g. *pāra + ga + si [o]* → *pārago* – “gone to the further shore [i.e. ‘nibbāna’]”; *kula + upa + ga + si [o]* → *kulupago* – “one who goes near a family,” “a family adviser”).

-*gha*: *√ghana* → *han* (“to strike,” “kill”; e.g. *paṭi + gha + si [o]* → *paṭigho* – “hatred”).

-gū: is a collateral form of \sqrt{gama} (e.g. *addhā + gū + si* [$\rightarrow \emptyset$] \rightarrow *addhagū* – “going to a distance,” “a traveler”).

-i: (a) large class of derivatives – agent and action nouns, patronymics (e.g. *duna + i* \rightarrow *doni* – “the son of Duna”; cf. Kacc 551). (b) From $\sqrt{dhā}$ (“to bear,” “hold”), a derivative *dhi* is formed. (c) It forms many compounds, mostly masculine (e.g. *saṃ + \sqrt{dhā} + i + si* [$\rightarrow \emptyset$] \rightarrow *sandhi* – “connection,” “union”). (d) Similarly, from $\sqrt{dā}$ (“to give”) with prefix *ā*, we obtain: *ādi* (*ā + \sqrt{dā} + i* [$\rightarrow \emptyset$] \rightarrow *ādi* – “and so forth,” “and so on,” “etcetera” etc., lit. “beginning”). (e) The word *ādi* is much used at the end of compounds and forms a few patronymics from nouns in *a*.

-i: After the word *pura* (“town,” “city”), it indicates that which belongs to or is proper for a city (e.g. *pura + i + si* [$\rightarrow \emptyset$] \rightarrow *pori*).

-ika: This affix is appended to \sqrt{gamu} and expresses future possibility and prospect (e.g. *\sqrt{gamu} + ika + si* [*o*] \rightarrow *gamiko* – “the [would-be] traveler”; Kacc 570). It also denotes any traveler (Thitzana, 2016: 721).

-ika: is of very wide application and denotes:

- Patronymics (e.g. *nādaputta + ika + si* [*o*] \rightarrow *nādaputtiko* – “the son of Nādaputta”).
- Living by means of (e.g. *nāvā + ika + si* [*o*] \rightarrow *nāviko* – “one who goes [or ‘lives by means of’] a boat”; i.e. “a sailor”; Kacc 351).
- Going by means of (e.g. *pada + ika + si* [*o*] \rightarrow *pādiko* – “one who goes with his feet,” “a pedestrian”; Kacc 350).
- Relating to (e.g. *samudda + ika + si* [*o*] \rightarrow *sāmuddiko* – “relating to the sea,” “marine”).
- Playing upon (e.g. *vīṇā + ika + si* [*o*] \rightarrow *veṇiko* – “playing upon a lute,” “a lute player”).
- Mixed with (e.g. *tela + ika* \rightarrow *telika* – “oily” or + *si* [*aṃ*] \rightarrow *telikaṃ* – “that which is mixed with oil”).
- Making, the maker (e.g. *tela + ika + si* [*o*] \rightarrow *teliko* – “an oil manufacturer”).

- Connected with (e.g. *dvāra* + *ika* + *si* [o] → *dvāriko* – “one who is connected with a door,” “a doorkeeper”).
- Carrying upon (e.g. *khandā* [“the shoulder”] + *ika* + *si* [o] → *khandiko* – “one who carries on the shoulder”).
- Born in, belonging to or living in a place (e.g. *sāvatti* + *ika* + *si* [o] → *sāvattiko* – “the one of [or ‘born in,’ ‘living in’] *Sāvatti*”; Kacc 350, 351).
- Studying, learning (e.g. *vinaya* + *ika* + *si* [o] → *venayiko* – “one who studies the *vinaya*”; Kacc 351).
- That which is performed by (e.g. *mānasa* + *ika* + *si* [o] → *mānasiko* – “mental”; Kacc 351).
- That which is bartered for (e.g. *suvaṇṇa* + *ika* + *si* [aṃ] → *sovaṇṇikaṃ* – “that which is bartered for gold”; Kacc 351).
- Possession (e.g. *daṇḍa* + *ika* + *si* [o] → *daṇḍiko* – “one who has a staff,” “a mendicant”; Kacc 367).
- Collection, herd, group (e.g. *kedāra* + *ika* + *si* [aṃ] → *kedārikaṃ*; Kacc 351).
- Measure (e.g. *kumbha* + *ika* + *si* [aṃ] → *kumbhikaṃ* – “that which is contained in a pot”; Kacc 351).
- Being mixed with something (e.g. *golikaṃ* – “food mixed with *guḷa* [i.e. ‘molasses’]”; Kacc 350).

-ima: (a) Denotes position or direction in space or time and also shows relation (e.g. *pacchā* + *ima* + *si* [o] → *pacchimo* – “hindmost,” “western”; Kacc 353). (b) It forms a limited number of possessive adjectives too (e.g. *putta* + *ima* + *si* [o] → *puttimo* – “the one who has a son”).

-in (-ī nom.): (a) This forms a very great number of derivatives. (b) A large class of possessive adjectives is also constructed with this affix (e.g. *manta* + *ī* + *si* [→ Ø] → *mantī* – “one replete with [or ‘having’] plans,” “a minister,” “adviser”; Kacc 366). (c) It also signifies praise, excellence and abundance (Vism-mhṭ I: 6).

-ina: (a) This affix constructs a few possessive adj. (e.g. *√mala* + *ina* → *malina* – “dirty,” “tainted”). (b) After *√ji*, it is used to form agent

nouns (*jino* – “the one who subjugates”; Kacc 558), and after *√supa* it makes abstract nouns (e.g. *supinaṃ* – “sleep”; Kacc 559).

-isika: This is the sign of the superlative (Kacc 363).

-itta: is said to express multitude (e.g. *√vada* + *itta* + *si* [*aṃ*] → *vādittaṃ* – “the multitude of those who play music,” “an orchestra”). This affix and its derivatives are incomprehensible.

-iṭṭha: An affix used for the comparison of adjectives (Kacc 363).

-iya: (a) An affix used for the comparison of adjectives (Kacc 363). (b) It forms a few abstract nouns (e.g. *issara* [“chief,” “lord”] + *iya* + *si* [*aṃ*] → *issariyaṃ* – “dominion”) and denotes position or direction in space or time (Kacc 353). (c) This affix intimates also sources of passion, fear, joy etc. (Kacc 356).

-ī: is used after the cardinals from ten upwards to form ordinals expressing the day of the month but sometimes also regular ordinals (e.g. *ekādasā* + *ī* + *si* [→ Ø] → *ekādasī* – “the 11th day” or simply “the 11th”).

-ī/-ñī: (a) Denotes habit, habitual pattern of doing things well, consistent character, ingrained nature (e.g. *brahma* + *√cara* + *ī* + *si* [→ Ø] → *brahmacārī* – “the one who [is used to] practicing the holy life”; Kacc 532). (b) It is also expressive of sure action or event and a debt owed (Kacc 636) as well as the sense of the future – the future sense is expressed when attached to *√gamu*, *√bhaja*, *√su*, *√ṭhā* etc. (Kacc 651).

-ja: *√jā*, *√jana* (“to be born,” “produced”; e.g. *paṇka* + *ja* + *si* [*aṃ*] → *paṇkajaṃ* – “that which is produced in the mud,” “a lotus”).

-ji: *√ji* (“to conquer”; e.g. *māra* + *ji* + *si* [→ Ø] → *māraji* – “conqueror of *māra*”).

-ka: (a) Kacc 571 states that this affix is applied after *√vada* and *√hana*. (b) It is used to form agent nouns and adjectives (e.g. *√vada* + *ka* + *si* [*o*] → *vādako* – “one who speaks,” “a musician”).

-ka: (a) This affix is much employed to form adjectives and also a certain number of substantive nouns which are, however, adjectives used as substantive nouns (e.g. *rakkhā* + *ka* + *si* [*o*] → *rakkhako* – “protecting,” “a guard”). (b) It also forms or denotes:

- Collection, group (e.g. *mahiṃsa + ka + si [o] → māhiṃsako* – “a group [or ‘band’] of buffaloes”; Kacc 354).
- Diminutives; sometimes, a certain amount of contempt is implied (e.g. *pāda + ka + si [o] → pādako* – “a small foot”).
- It is much used in compounds, above all attributives, to form possessives – often, it is redundant.
- The use of *ka* after numerals also occurs.
- Abstract nouns (Kacc 362).
- Not seldom, *ka* adds nothing whatsoever to the primary meaning of the word.

-kaṭa: (a) is considered an affix by some grammarians. (b) It forms adjectives differing very little or even not at all from the meaning of the affix to which it is added. (c) It is probably a form of *kata*, from *√kara* (“to do,” “make”). (d) It is used with these prefixes: *ni + kaṭa → nikaṭa* (“near”); *vi + kaṭa → vikaṭa* (“changed”); *pa + kaṭa → pākaṭa* (“evident,” “public,” “clear”); *saṃ + kaṭa → saṃkaṭa* (“narrow”).

-kha: *√khā* is a collateral form of *√khana*.

-kiya: This affix forms adjectives denoting relation/connection and is made up of *ka + iya* (e.g. *andha + kiya → andhakiya* – “relating [or ‘belonging’] to the Andha country”).

-kvi: (a) Duroiselle (1906/1997: 151) has the following to say about this affix: “‘kvi’ is an imaginary suffix denoting that the root itself is to be considered as the suffix. [...] As these form primarily adjectives, they assume, in certain cases, but not always, the endings of the three genders.” (b) These roots can themselves be appended to all roots (Kacc 530) but are in practice elided (e.g. *sayam + √bhū + kvi + si [→ Ø] → sayambhū*; Kacc 639).

-la: (a) forms a few adjectives and substantive nouns and is often preceded by the vowels *i* and *u* (e.g. *bahu + la → bahula* – “abundant”). (b) Affix *la* is another form of *ra*; *ra* and *la* are oftentimes interchangeable. (c) It expresses that on which something “depends” or to which it is “related” (Kacc 358).

- ma:** (a) This affix forms some abstract nouns, agent nouns and some adjectives (e.g. $\sqrt{bhī}$ [“to fear,” “to be afraid of”] + *ma* → *bhīma* – “terrible,” “fearful”; Kacc 369). (b) It also forms ordinal numbers (Kacc 373).
- mantu** (*-mā* nom.): expresses possession of the quality or state indicated by the noun to which it is affixed (e.g. *sati* + *mantu* + *si* [*ā*] → *satimā* – “possessed of mindfulness [i.e. ‘mindful’]”; Kacc 369; morphological changes as per Kacc 124).
- maya:** with this affix are formed adjectives denoting “made of,” “consisting of” (e.g. *suvaṇṇa* + *maya* → *suvaṇṇamaya* – “made of gold,” “golden”; Kacc 372).
- min** (*-mī* nom.): This forms a few possessive adjectives (e.g. *gomī* – “possessing oxen,” “cattle,” “a possessor of cattle”; *sāmī* – “owner,” “master,” “lord”).
- ni:** By means of this affix, we obtain but a few substantive nouns (e.g. $\sqrt{hā}$ + *ni* + *si* [→ Ø] → *hāni* – “abandonment,” “loss,” “decay”).
- nu:** forms a few words, some abstract and some concrete (e.g. $\sqrt{bhā}$ + *nu* + *si* [→ Ø] → *bhānu* – “beam,” “light,” “the sun”).
- pa:** $\sqrt{pā}$ (“to drink”; e.g. *pada* + *pa* + *si* [*o*] → *pādapo* – “drinking by the foot [i.e. ‘the root’],” “a tree”).
- ra:** It is said that *upasaggo saṃ* + \sqrt{hana} and others take affix *ra* – with \sqrt{hana} → *gh* (e.g. *saṃ* + \sqrt{hana} + *ra* + *si* [*o*] → *saṅgho*; Kacc 538).
- ra:** (a) A few abstracts are formed with the help of this affix. (b) It is often preceded by the vowels *a* and *i* (e.g. *madhu* [“honey”] + *ra* → *madhura* – “sweet” or + *si* [*o*] → *madhuro* – “something having a sweet taste”; Kacc 367).
- ramma** (**-an stem**): (a) forms action nouns (e.g. \sqrt{dhara} + *ramma* + *si* [*o* or *aṃ*] → *dhammo* or *dhammaṃ* – “nature,” “characteristic” etc.; Kacc 531). (b) When any *r*-morpheme is appended to a root, the first component vowel of that root and its last consonant as well as the vowel and the *r* of the *r*-morpheme are usually elided (see *rū* below for an example; Kacc 539).

- ratthu (-ā nom.):** (a) This affix forms agent nouns (e.g. *sāsa + ratthu + si* [→ Ø] → *satthā*; Kacc 566; morphological changes of *u* [of *ratthu*] → *ā* as per Kacc 199). (b) In Table 3 in the “Tables” section below, the declensions belonging to this affix are given as having the stem in *r*, following in that other Western Pāli guides (modelled after Sanskrit grammar). Actually, this affix forms stems in *u* with the nominative in *ā*.
- ri:** Just a very few formations transpire with this affix (e.g. *√bhū + ri + si* [→ Ø] → *bhūri* – “abundant,” “much”).
- ricca:** (a) This affix of the future passive participle is called a *kicca* affix but is included in the *kita* chapter of Kaccāyana (e.g. *√kara + icca + si* [*aṃ*] → *kiccaṃ* – “that which ought to be done”; Kacc 540, 542, 545). (b) When any *r*-morpheme is appended to a root, the first component vowel of that root and its last consonant as well as the vowel and the *r* of the *r*-morpheme are usually elided (see affix *rū* below for an example; Kacc 539).
- ririya:** Occasionally applied after *√kara* (e.g. *√kara + ririya + si* [*aṃ*] → *kiriyaṃ*), it is another affix of the future passive participle (Kacc 554).
- ritu, -rātu (-ā nom.):** These affixes form agent nouns (e.g. *√pā + ritu + si* [→ Ø] → *pitā* – “father”; Kacc 567–568).¹⁸⁹ The same holds true here for what was explained just above for the *ratthu* affix: “In Table 3 in the ‘Tables’ section below, the declensions belonging to this affix are given as having the stem in *r*, following in that other Western Pāli guides (modelled after Sanskrit grammar). Actually, this affix forms stems in *u* with the nominative in *ā*.”
- ru:** is used to form some substantive nouns and adjectives and stands to express habit, habitual pattern of doing things well, consistent character, ingrained nature (e.g. *√bhī* [“to fear,” “to be afraid”] + *ru + si* [→ Ø] → *bhīru* – “timid”).

¹⁸⁹ Morphological changes of *u* [of *ritu*] → *ā* as per Kacc 199.

-rū (-u stem): (a) stands to mean: habit, habitual pattern of doing things well, consistent character, ingrained nature (e.g. *bhikkha* + *rū* + *si* [$\rightarrow \emptyset$] \rightarrow *bhikkhu*; Kacc 534–535). **(b)** When any *r*-morpheme is appended to a root, the first component vowel of that root as well the vowel and the *r* of the *r*-morpheme and its last consonant are usually elided (e.g. *pāra* + $\sqrt{\text{gamu}}$ + *rū* \rightarrow *pāragū*; Kacc 539).

-so: From this are made a few adjectives, and it is applied after some nouns expressing possessiveness (e.g. *medhāso* – “the one having wisdom”; Kacc 364).

-(s)sī: This affix is used to form adjectives of possession from stems *tapa*, *teja* etc. (Kacc 365).

-ta: (a) This is the affix of the past passive participle and a few concrete nouns (e.g. $\sqrt{\text{su}}$ + *ta* + *si* [*aṃ*] \rightarrow *sotaṃ* – “the ear,” “a stream”). **(b)** The *ta* affix is applied after $\sqrt{\text{chada}}$, $\sqrt{\text{citi}}$, $\sqrt{\text{su}}$, $\sqrt{\text{nī}}$, $\sqrt{\text{vida}}$, $\sqrt{\text{pada}}$, $\sqrt{\text{tanu}}$, $\sqrt{\text{yata}}$, $\sqrt{\text{vada}}$, $\sqrt{\text{mada}}$, $\sqrt{\text{yuja}}$, $\sqrt{\text{vatu}}$, $\sqrt{\text{mida}}$, $\sqrt{\text{mā}}$, $\sqrt{\text{pu}}$, $\sqrt{\text{kala}}$, $\sqrt{\text{vara}}$, $\sqrt{\text{ve}}$, $\sqrt{\text{pu}}$, $\sqrt{\text{gupa}}$, $\sqrt{\text{dā}}$ etc. (Kacc 656). **(c)** *Kita* affix *ta* \rightarrow *cca* or $\sqrt{\text{ṭṭa}}$ / $\sqrt{\text{naṭa}}$ — (e.g. $\sqrt{\text{naṭa}}$ + *ta* + *si* [*aṃ*] \rightarrow *naccaṃ* – “dancing”; Kacc 571).

-tabba: It is called a *kicca* affix but included in the *kita* chapter of Kaccāyana (Kacc 545) – an affix of the future passive participle (Kacc 540).

-tama: This is the affix used in forming the superlative (Kacc 363).

-tana: forms a few adjectives from adverbs (e.g. *svā* [*sve*, *suve*] + *tana* + *si* [*o*] \rightarrow *svātano* – “belonging to tomorrow”).

-tara: is the affix used to form the comparative (Kacc 363).

-tavantu (-tavā nom.): This affix forms the past active participle (Kacc 555; Thitzana, 2016: 712).

-tave: This is a suffix of the infinitive.

-tā: (a) This affix forms feminine abstract nouns from adjectives and denotes several things: the state, nature or quality of being of that which is denoted by the adjectives or substantive nouns (e.g. *lahu* + *tā* + *si* [$\rightarrow \emptyset$] \rightarrow *lahutā* – “lightness”; Kacc 360). **(b)** It also denotes

“multitude” or “collection” (e.g. *jana* + *tā* + *si* [$\rightarrow \emptyset$] \rightarrow *janatā* – “a multitude of persons,” “folk,” “people”; Kacc 355).

-*tāvī*: This is another affix of the past active participle (Kacc 555; Thitzana, 2016: 712).

-*teyya*: This one is designated a *kicca* affix but is included in the *kita* chapter of Kaccāyana (Kacc 545) – an affix of the future passive participle (Kacc 540).

-*tha*: The derivatives constructed with this affix are not very numerous (e.g. $\sqrt{gā}$ + *tha* + *si* [*ā*] \rightarrow *gāthā* – “a song,” “stanza,” “verse”).

-*tha*: used in forming ordinals: fourth, fifth etc.

-*thā*: applied after pronouns to express “manner” (e.g. *yathā* – “by which manner” etc.; Kacc 398).

-*thaṃ*: makes adverbs from pronominal stems and denotes “manner” (Kacc 399).

-*ti*: fashions an extensive class of derivatives and stands for the following:

- Fem. action nouns (e.g. \sqrt{bhaj} + [*ti*] + *si* [$\rightarrow \emptyset$] \rightarrow *bhatti* – “division”; cf. Kacc 553).
- A circumscribed number of adjectives.
- Proper nouns expressive of “wishing well” (e.g. *ghanabhūti* [a name] – “May he be prosperous [or ‘wealthy’]!”; Kacc 552).

-*ti*: used to form words expressing decades.

-*tra*, *ta*: form a large number of derivatives, chiefly agent and concrete nouns (e.g. \sqrt{chad} + *tra* or *ta* + *si* [*aṃ*] \rightarrow *chatraṃ*, *chattaṃ* – “an umbrella”).

-*tta*: abstract form of that which is denoted by the adjective or substantive noun (e.g. *puthujjana* + *tta* + *si* [*aṃ*] \rightarrow *puthujjanattaṃ* – “the state of being a common man”; Kacc 360).

-*ttana*: used in the same sense as *tta*.

-*tu* (-*tā* nom.): (**a**) forms agent nouns and signifies habit, habitual pattern of doing things well, consistent character, ingrained nature (e.g.

bhijanadātā – “the one who gives food,” “the food giver”; Kacc 527, 532). **(b)** It can be expressive of a future sense (e.g. *bhottā* – “[would-be] eater”; Kacc 652).

-tuka: This affix is applied after *√gamu*, forming agent nouns (e.g. *ā + √gamu + tuka + si [o] → āgantuko* – “the one who comes”; Kacc 569).

-tum: This is a suffix of the infinitive.

-tuna: This is a suffix of the absolutive.

-tvā: This is a suffix of the absolutive.

-tvāna: This is another suffix of the absolutive.

-tya: forms a few adjectives from indeclinables (e.g. *niti + tyā → nicca* – “inward,” “inmate,” “own,” “eternal”; cf. Kacc 638).

-uka/-ṇuka: forms a few substantive nouns and adjectives denoting the agent and also denotes: habit, habitual pattern of doing things well, consistent character, ingrained nature (e.g. *√pada* [“to step”] + *uka + si [o] → pāduko* – “a shoe”; Kacc 536).

-una: forms a few derivatives (e.g. *√pisa + una → pisuna* – “malicious” or + *si [o] → pisuno* – “backbiting,” “a talebearer”).

-ū: forms some adjectives and substantive nouns (e.g. *√vida + kvi + ū + si [→ Ø] → vidū* – “knowing”; the *kvi* affix is elided as per Kacc 639).

-va: forms a small number of adjectives (e.g. *aṇṇa* [“wave”] + *va → aṇṇava* – “billowy”).

-vantu (-vā nom.): **(a)** This affix makes a very large class of possessive adjectives. **(b)** It is similar in character to *mantu (mā)* and expresses possession of the quality or state indicated by the noun to which it is affixed: *māna + vantū + si [ā] → mānavā* – “having pride [i.e. ‘proud’]”; Kacc 368; morphological changes as per Kacc 124).

-vī: **(a)** This affix is used to form adjectives of possession (e.g. *medhā + vī + si [→ Ø] → medhāvī* – “the one possessing wisdom,” “the wise one”; Kacc 364). **(b)** The suffix *inī* is employed to construct the feminine (e.g. *medhāvinī*; Kacc 240; cf. Duroiselle, 1906/1997: 58).

-ya/-ṇya: This is called a *kicca* affix but is included in the *kita* chapter of Kaccāyana (Kacc 545) – an affix of the future passive participle (Kacc 540).

-ya: **(a)** forms a very large class of nouns, mostly neuter abstract; **(b)** strengthening takes place in most cases and assimilation is regular (e.g. *alasa* + *ya* + *si* [*aṃ*] → *ālasyaṃ*, *ālassaṃ* – “laziness”; Kacc 360).

Uṇādi Affixes

(a) Kaccāyana's uṇādi chapter comprises special rules and further miscellaneous affixes for words which cannot be derived from the antecedent ones tendered so far (Subhūti, 2018: 11). (b) To avoid repetition, this chapter deals only with the latter affixes because the divers morphological rules have already been given above, in the chapter "Morphology." (c) The words formed with the addition of uṇādi affixes are presumably capable of expressing any sense, such as agent, object, instrument and abode, as demanded by exigency (Abhyankar, 1961). (d) The just tendered supposition constitutes a fact when presented against the backdrop of the Sanskrit language but is not explicitly spelled out in Kaccāyana, although the examples therein support it. (e) These are the respective affixes.

-*ala*: is added after √paṭa, √kala, √kusa, √kada, √bhaganda, √mekha, √vakka, √takka, √palla, √sadda, √mūla, √bila, √vida, √caḍi, stem pañca, √vā, √vasa, √paci, √maca, √musa, √gotthu, √puthu, √bahu, √maṅga, √baha, √kamba, √samba, √agga and after some stems (Kacc 665).

-*athu*: This affix is applied after √vepu, √sī, √dava, √vamu, √ku, √dā, √bhū, √hū etc. and expresses the sense of "caused by" or "originated from" (e.g. √vepu + athu + si [→ Ø] → vepathu – "ailment [which occurs by the shaking of the body]"; Kacc 644).

-*āni*: This affix is applied after all roots in the context of the applied negative particle *na* and signifies a sense of "reviling" or "cursing" (e.g. na + √kara + āni + si [→ Ø] → akarāṇi; Kacc 645).

-*da*: This affix is employed after √uda, √idi, √cadi, √madi, √khuda, √chidi, √rudi etc. (e.g. √idi + da + si + [o] → indo – the celestial king of that name; Kacc 661; Thitzana, 2016: 807).

-*dha*: is used after √ranja etc., seemingly forming concrete, abstract, proper and agent nouns (e.g. √ranja + dha + si [aṃ] → randham – "hole"; Kacc 661; Thitzana, 2016: 807).

-*du*: This affix is utilized after √sasū, √dada, √vada, √mada etc. (e.g. √dada + du + si [→ Ø] → daddu – a kind of cutaneous eruption; Kacc 667).

- ḍha*: is appended to √*usu*, √*ranja*, √*daṃṣa* (√*daṃṣa* → *daḍḍha*; e.g. √*usu* + *ḍha* + *si* [o] → *uḍḍho* – “heat”; Kacc 659).
- ghīṇ*: This one could be a redundant affix which is pretty much alike *kita* affix *i/ṇī* (cf. Kacc 651; Thitzana, 2016: 796).
- i*: is appended to √*muna*, √*yata*, √*agga*, √*pata*, √*kava*, √*suca*, √*ruca*, stem *mahāla* and stem *bhaddāla*, √*mana* etc. as well as after some other stems (e.g. √*muna* + *i* + *si* [→ Ø] → *muni* – “a sage”; Kacc 669).
- idda*: is used after √*dala* etc. (e.g. √*dala* + *idda* + *si* [o] → *daliddo* – “a beggar”; Kacc 661; Thitzana, 2016: 807).
- ima/-ṇima*: is applied after √*vepu*, √*sī*, √*dava*, √*vamu*, √*ku*, √*dā*, √*bhū*, √*hū* etc. and expresses the sense of “caused by” or “originated from” (e.g. *ava* + √*hu* + *ṇima* + *si* [aṃ] → *ohāvimam* – “things meant for sacrifice”; Kacc 644).
- ira*: This affix is used after √*vaja* etc. (e.g. √*vaja* + *ira* + *si* [aṃ] → *vajiram* – “diamond,” “thunderbolt”; Kacc 661; Thitzana, 2016: 807).
- isa*: This one is affixed to √*manu*, √*pūra*, √*suṇa*, √*ku*, √*su*, √*ila*, √*ala*, √*maha*, √*si*, √*ki* etc. and some stems (e.g. √*ala* + *isa* + *si* [o] → *alaso* – “a lazy man”; Kacc 673).
- itta/-ṇitta*: is attached to √*vada*, √*cara*, √*vara* etc., expressing “collection” or “grouping” (e.g. √*cara* + *ṇitta* + *si* [aṃ] → *cārittam* – “group of ethical precepts [or ‘rules]”; Kacc 657).
- īvara*: Affix is put to use after √*ci*, √*pā*, √*dhā* etc. (e.g. √*pā* + *īvara* + *si* [o] → *pīvaro* – “a fat person”; Kacc 668).
- ka*: This affix is found to be attached after √*susa*, √*suca*, √*vaca* etc. (e.g. √*suca* + *ka* + *si* [o] → *soko* – “sadness”; Kacc 661; Thitzana, 2016: 807) and is also applicable after √*kaḍi*, √*ghaḍi*, √*vaḍi*, √*karaḍi*, √*maḍi*, √*saḍi*, √*kuṭhi*, √*bhaḍi*, √*paḍi*, √*daḍi*, √*raḍi*, √*taḍi*, √*siḍi*, √*caḍi*, √*gaḍi*, √*ḍaḍi*, √*laḍi*, √*meḍi*, √*veraḍi*, √*khaḍi* etc. (e.g. √*kaḍi* + *ka* + *si* [o] → *kaṇḍo* – “chapter”; Kacc 663).
- kta*: This affix can be regarded as the *kita* affix *ta* (Kacc 626; Thitzana, 2016: 765).

- la*: is applied after *√ala*, *√kala*, *√sala* and forms substantive nouns and adjectives (e.g. *√sala* + *la* + *si* [aṃ] → *sallaṃ* – “arrow [lit. ‘that which pierces’]”; Kacc 632).
- lāna*: is appended to *√kala* and *√sala* (e.g. *pati* + *√sala* + *lāna* + *si* [aṃ] → *paṭisallānaṃ* – “seclusion”; Kacc 633).
- ma*: As with affix *tha*, this affix is applied after *√samu*, *√damu*, *√dara*, *√raha*, *√du*, *√hi*, *√si*, *√bhī*, *√dā*, *√yā*, *√sā*, *√ṭhā*, *√bhasa* etc. (e.g. *√du* + *ma* + *si* [o] → *dumo* – “a tree”; Kacc 628).
- man*: After *√khi*, *√bhī*, *√su*, *√ru*, *√hu*, *√vā*, *√dhū*, *√hi*, *√lū*, *√pī*, *√ada* etc., this affix is applied (Kacc 627).
- nu*: This affix is appended to *√hana*, *√jana*, *√bhā*, *√ri*, *√khanu*, *√ama*, *√ve*, *√dhe*, *√dhā*, *√si*, *√ki*, *√hi* etc. (Kacc 671).
- tha*: This affix is applied after *√samu*, *√damu*, *√dara*, *√raha*, *√du*, *√hi*, *√si*, *√bhī*, *√dā*, *√yā*, *√sā*, *√ṭhā*, *√bhasa* etc. (Kacc 628).
- ṭha*: This affix, as *ḍha* above, is appended to *√usu*, *√ranja*, *√daṃsa* (*√daṃṣa* → *daḍḍha*; e.g. *√ranja* + *ṭha* + *si* [aṃ] → *raṭṭhaṃ* – “kingdom”; Kacc 659) and also to *√kuṭa*, *√kusa*, *√kaṭa* etc. and some stems (e.g. *√kaṭa* + *ṭha* + *si* [aṃ] → *kaṭṭhaṃ* – “piece of wood”; Kacc 672).
- ti*: Same explanation as for *tī* applies; possibly the same affix as *kita ti*.
- tī*: is appended to *√mida*, *√pada*, *√ranja*, *√tanu*, *√dhā* etc., forming common and abstract nouns (e.g. *√mida* + *tī* + *si* [→ Ø] → *metti* – “love”; Kacc 658).
- tīma*: This affix is applied after *√vepu*, *√sī*, *√dava*, *√vamu*, *√ku*, *√dā*, *√bhū*, *√hū* etc. and expresses the sense of “caused by” or “originated from” (e.g. *√kara* + *tīma* + *si* [aṃ] → *kuttimaṃ* – “something created artificially”; Kacc 644).
- tran*: The affix is applied after *√chada*, *√citi*, *√su*, *√nī*, *√vida*, *√pada*, *√tanu*, *√yata*, *√ada*, *√mada*, *√yuja*, *√vatu*, *√mida*, *√mā*, *√pu*, *√kala*, *√vara*, *√ve*, *√pu*, *√gupa*, *√dā* (e.g. *√yuja* + *tran* + *si* [aṃ] → *yotraṃ* – “rope”; Kacc 656).

- tu: is utilized after √sasū, √dada, √ada, √mada etc. (e.g. √sasū + tu + si [→ Ø] → sattu – “enemy”; Kacc 667) and also after √hana, √jana, √bhā, √ri, √khanu, √ama, √ve, √dhe, √dhā, √si, √ki, √hi etc. (e.g. √dhā + tu → dhātu – “root”; Kacc 671).
- u/-ṇu: **(a)** is applied in the senses of the present and past (e.g. √kara + u + si [→ Ø] → kārū – “artisan” or “carpenter [who did or is doing his craft]”; Kacc 650). **(b)** It is used after √hana, √jana, √bhā, √ri, √khanu, √ama, √ve, √dhe, √dhā, √si, √ki, √hi etc. (Kacc 671).
- ūra: This affix finds itself employed after √vida, √valla, √masa, √sida, √du, √ku, √kapu, √maya, √udi, √khajja, √kura etc. and after some stems (e.g. √du + ūra + si [o] → dūro – “a distant place,” “remote”; Kacc 670).
- usa: Affix is appended to √manu, √pūra, √suṇa, √ku, √su, √ila, √ala, √maha, √si, √ki etc. and some stems (e.g. √manu [or √mana] + usa + si [o] → manusso – “a human being”; Kacc 673).
- ya: is applied after √ala, √kala, √sala (Kacc 632).
- yāna: This type of affix is tacked to √kala and √sala (e.g. √kala + yāna + si [aṃ] → kalyāṇaṃ – “good”; Kacc 633).

Repetition

(a) Repetition of words at times happens to express the senses of plurality, totality, distribution, variety, multiplicity etc. (e.g. *yaṃ yaṃ gāmaṃ* – “whatever village”; Duroiselle, 1906/1997: 162). (b) Oftentimes, a strong dissimilarity is expressed by repeating the interrogative pronoun before each clause in a sentence (e.g. *ke ca chhave sigāle ke pana sihanāde* – “What is [the yapping of] a vile jackal but what a lion’s roar,” DN III: 10 [DN 24]; Perniola, 1997: 393).

Prohibition

(a) As mentioned under the aorist section above: “The indeclinable *mā* + the aorist intimates prohibition (Duroiselle, 1906/1997: 163) and may stand for all tenses (e.g. *mā gamī* – ‘Don’t go!’; Kacc 420).” (b) In some cases, the present indicative, imperative and optative moods following *mā* can also be employed to express the selfsame import (e.g. *mā pamādamanuyuñjetha*, *mā kāmaratisanthavaṃ* – “Don’t engage in heedlessness and intimacy with sensual delight,” Dhṛ: 2, v. 27; Dhammajoti, 2018: 234; Oberlies, 2019: 474). (c) An optative with *na* (Duroiselle: 167) and indeclinables *alaṃ/halaṃ* (“enough!”, “stop!”) may also be utilized to voice prohibition (Collins, 2006: 121).

Comparison

(a) As mentioned above in the chapter “Sentence Structure and Syntax”: “*seyyathāpi* (‘just as’) contrasted with *evameva* (‘just so’) and *yathā* (‘just as’) contrasted with *tathā* (‘so’)” are expressive of comparative clauses (Perniola, 1997: 393). (b) To repeat another relevant portion from just above: “Oftentimes, a strong dissimilarity is expressed by repeating the interrogative pronoun before each clause in a sentence (e.g. *ke ca chhave sigāle ke pana sihanāde* – ‘What is [the yapping of] a vile jackal but what a lion’s roar’).” (c) It also needs to be reiterated here for convenience that “certain

past participles, by themselves or as the final member of compounds, are used comparatively with the appropriate affixes (e.g. *paṇīta* – ‘excellent’ → *paṇītatara* – ‘more excellent’).” **(d)** In addition to that, it must be mentioned that the second term of an attributive compound is expressive of a comparison when it ends with *upamā* (“simile,” “parable,” “comparison”; e.g. *nagarūpamaṇ* – “like a citadel”), and superiority is expressed when the word *seyyo* is found in the first clause or phrase (Perniola: 394).

Interrogation

(a) The main verbs of interrogative clauses may be the present, aorist or future of the indicative or stand in the optative mood (e.g. *taṃ kiṃ maññasi* – “What do you think of this?”, DN I: 28 [DN 2]; *iccheyyātha no tumhe mārisā nimi rājānaṃ daṭṭhum* – “Would you like, friends, to see king Nimi?”, MN II: 132 [MN 83]). **(b)** Interrogation may also be realized with participles or agent nouns – with or without an auxiliary verb. **(c)** Pronouns, pronominal adjectives, adverbs and interrogative particles (e.g. *api*, *api nu*, *api nu kho*, *kiṃ*, *katara*, *kati*, *kīva*, *ko*, *kā*, *kadā*, *kathā*, *kamaṃ*, *kuhiṃ* etc.) may be employed to construct interrogative clauses (Perniola, 1997: 388–9) – *api* and *api nu* stand as sentence initials, but *kiṃ* may also be encountered in the final position (Ānandamaitreya, 1993/2012: 17). **(d)** Phrases like *saccaṃ kira* (“Is it really true?”) and *atthi nāma* (“Is it thus?”) can also be utilized to frame interrogative clauses (e.g. *saccaṃ kira tvaṃ, nanda, sambahulānaṃ bhikkhūnaṃ evaṃ ārocesi* – “Is it really true, Nanda, that you spoke thus to many bhikkhus?”, Ud: 14 [Ud 3.2]). **(e)** The same sense of interrogation is occasionally achieved when placing the main verb or the verb *atthi*¹⁹⁰ at the beginning of a sentence (Perniola: 389–90; Dhammajoti, 2018: 116). **(f)** Negative particle *na* before *nu* intimates an emphatic interrogation – *kiṃ* and *api* followed by *nu* also possess emphatic force. **(g)** At times, the mere tone of voice suffices to form a question (e.g. *supaṃ labhi* – “Did you get sleep?”; Duroiselle, 1906/1997: 168; Dhammajoti: 116).

¹⁹⁰ In certain instances, it is effectively indeclinable, so the context has to be evaluated to understand the respective case, if it is interrogative or not.

Negation

(a) Negative sentences are constructed with the negative particles *na* and *no* (e.g. *na dānāhaṃ bhagavantaṃ uddissa viharāmi* – “Now I am not living with reference to the Blessed One [as a teacher],” DN III: 1 [DN 24]; Duroiselle, 1906/1997: 167). (b) Some particles following *na* put emphasis on it (e.g. *na + pi* → *nāpi*; *na + eva* → *neva*; *na + kho* → *na kho* etc.; Perniola, 1997: 384), and in the case of *no* following *na*, the emphasis becomes a strong one. (c) As explained above, an optative may also stand with *na* to give the same meaning (Duroiselle: 167). (d) Two negative particles *na* have an affirmative sense, making the sentence positive (Duroiselle: 167). (e) On some occasions, particles *a/an* and *na* are added to substantive nouns, adjectives, verbs (finite and infinite forms) or predicates to invest them with a negative or privative meaning (DOP I, s.v. “a-”; Collins, 2006, 121; Perniola: 384) – *a* and *na* before consonants and *an* before vowels. (f) As mentioned earlier in the chapter “Compounds (*samāsā*),” these particles can also stand as the first member of a dependent-determinative compound (e.g. *na + āgamaṇaṃ* → *nāgamaṇaṃ* – “non-arrival”; Kacc 333–334).

Etcetera (etc.)

(a) The word *ādi* (“beginning,” “starting point,” “beginning with”), functioning either as an adjective or adverb, is sometimes added to a noun or a list to convey the sense of “etcetera,” “and so forth” but can also stand by itself (e.g. *ko ādi* – “What is the beginning?”). (b) It can also appear as a neuter – when the phrase ends in a neuter noun – or masculine plural construction (e.g. *muttakarīsādīni* – “excrement, urine etc.”; *pasukādayo* – “quadrupeds etc.”; cf. Gair & Karunatilake, 1998: 141; Levman, personal communication, July 17, 2020).

Direct and Indirect Speech

Direct Speech

(a) Direct speech is a common feature of the Pāli language. (b) The particle *iti* (“so,” “thus,” “in this way”) marks a clause as direct speech (or thought etc.) when following it. (c) It is always abbreviated to *ti* unless undergoing a change to *cca* due to sandhi procedures (e.g. ‘*pāpaṃ me katan’ti tappati* – “He is tormented [thinking]: ‘Evil has been done by me,’” Dhp: 2, v. 17). The two forms may also appear together for emphasis. (d) *Iti* is an adverb of manner usually suffixed (rarely prefixed) to words, phrases or clauses – with or without verbs such as “saying,” “thinking” etc. – and typically has the meaning of “quote” (Collins, 2006: 141; Deokar, 2013: 125; Duroiselle, 1906/1997: 167; Perniola, 1997: 395; Warder, 1963/2001: 35–6). (e) It is at times difficult to ascertain when the quotation begins since in most cases an opening quotation marker is not set. (f) The respective rules of morphology and sandhi are applied for *iti* and its preceding and succeeding letters (e.g. *iti + evaṃ* → *iccevaṃ*; *kvāci + iti* → *kvācīti*) – a vowel preceding *iti* is usually lengthened and *ṃ* → *n* (e.g. ‘*sammukhībhūto no satthā ahoṣi, na mayaṃ sakkhimhā bhagavantaṃ sammukhā paṭipucchitun’ti* – “The teacher had been present with us, [yet] we were not able to ask the Blessed One in his presence,” DN II: 64 [DN 16]; Collins: 141–2; Duroiselle: 167; Warder: 36). (g) It is possible to convey the idea of quotation in Pāli texts leaving out the particle *iti* altogether (e.g. *sakyo eva muni sakyamuni* – “‘The Sakyan Sage’: that very Sakyan as a sage,” Pj I: 72).

(a) To quote a pertinent statement of Duroiselle (1906/1997: 167): “Verbs of ‘saying, telling, asking, naming, knowing, thinking,’ are generally used with *iti*.” Such verbs may stand either after or before the elements quoted or be omitted altogether (e.g. ‘*sādhū’ti vatvā* – “having said ‘very well’”). (b) Clauses with *iti* express the words as well as the thoughts of persons or anything quoted (such as titles of books) and also signify the senses of cause, motive, intention, purpose, bringing to completion, variation in the meaning of near synonyms, manner, affirmation and illustration (e.g. ‘*jīvitum asakkontā’ti* – “because we are unable to make a

living”; Ānandamaitreya, 2012: 180; Collins, 2006: 142; Duroiselle: 167). **(c)** *Iti* appears also to be used in the prepositional sense of English “as” (e.g. *yo ca neyyatthaṃ suddantaṃ neyyattho suddantoti dīpeti* – “he who explains a discourse whose meaning has to be inferred as a discourse whose meaning has to be inferred,” AN II: 7 [AN 2.25]).

Indirect Speech

(a) Indirect speech is just rarely employed in the Pāḷi language (Warder, 1963/2001: 36). **(b)** When it occurs, it is in constructions where a substantive noun or pronoun stands with a participle agreeing with it, both constituting then the object of the clause’s main verb (e.g. *tathāgate arahante sammāsambuddhe āsādetabbaṃ maññasi* – “You think that the Tathagata, the worthy one, the Perfectly Enlightened One, ought to be assailed,” DN III: 10 [DN 24]; Perniola, 1997: 395; cf. Wijesekera, 1936/1993: 106). **(c)** Attributive and dependent-determinative compounds are also seen to express indirect speech (e.g. *āhu sabbappahāyinaṃ* – “They say [that] he is one who has given up everything,” It: 26 [It 66]; Perniola: 395–6). **(d)** In certain contexts, it is not impossible to translate an *iti*-clause – as introduced above in the section “Direct Speech” – into English by means of employing indirect speech.

Metrical License

(a) Metrical License is rare in Pāli when compared to the usage in Buddhist Hybrid Sanskrit, but the readers of Pāli texts not infrequently encounter irregular forms in verse compositions (Warder, 1967: 74). (b) This license is most prominent in the increased flexibility it imparts on the order of words in verse compilations but comprises also the following.

- Employment of archaic word forms instead of regular ones (e.g. *ādiseyya* → *ādise* – “should announce,” “should dedicate”; *sāvakā* → *sāvakāse* – “disciples,” DN II: 111 [DN 8]; Warder, 1963/2001: 356).
- Flexible sandhi (Warder, 1967: 71).
- Phonological variance (e.g. *hessati/bhavissati*, Bv: 9; Warder: 71).
- Alternative case numbers expressive of the same meaning (Warder: 74).
- Employment of lexicographical variants (e.g. *nimeso* → *nimiso* – “winking”; *upayānaṃ* → *upāyanaṃ* – “approach,” Cp: 3; Warder: 73).
- Lengthening of short vowels and shortening of long vowels: as word initials, word finals, between compound words, betwixt prefixes and roots as well as roots and affixes (incl. suffixes) and occasionally also as root vowels (e.g. *upanissaya* → *ūpanissaya* – “supporting condition”; *nadati* → *nadatī* – “roar”; *ca* → *cā* – “and”; *satimā* → *satīmā* – “possessed of mindfulness”; *chetvā* → *chetva* – “having cut [or ‘severed’],” Sn: 3 [Sn 3]; Ānandajoti, 2000/2004: 18; Warder 1963/2001: 355; Warder, 1967: 75–7, 82).
- Doubling or simplification of consonants (Ānandajoti: 18–9).
- Elision, insertion or change of the *niggahitaṃ* (e.g. *ṃ* → *m* at the end of a word; Ānandajoti: 18–20).
- Elision of whole syllables (e.g. *chamāya* → *chamā* – “on the ground”; *accupatati* → *accupatī* – “He flew nearby,” Jā I: 166 [Jā 481]; Warder: 78, 82).
- Insertion of redundant particles providing emphasis or with otherwise opaque meaning.

- Interchangeability, for the most part, of final vowels *i* and *e*, *a* and *o* (Warder: 78).

(a) It is the fluidity of the language that accounts for most of the above-mentioned variation (Warder, 1967: 83). **(b)** It must be remarked that (i) end syllables are most likely to be affected by the changes, (ii) that syllables in medial position are only altered within a junction (either between compound words or stems and affixes) and that (iii) initial syllables but infrequently change (Ānandajoti, 2000/2004: 19). **(c)** The denominative, intensive, desiderative and root aorist are more often met with in verse than in prose formats (Warder 1963/2001: 356); the root aorist is found in poetry without the augment *a* (Perniola, 1997: 273). **(d)** Most of the occurrences of the middle voice are also encountered in verse (Perniola: 339).

Tables

Declensions – Substantive Nouns and Adjectives

Table 3. Substantive Noun and Adjectival Declensions (stem vowels mostly included)

Stem	-a	-a	-ā	-i	-i	-in	-in
Gender, sing.	Masc.	Neut.	Fem.	Masc.	Neut.	Masc.	Fem.
Nominative	e, o	aṃ, e	ā	i, ī	asū, i(ṃ)	i, ī	i, inī, ī
Vocative	a, aṃ, ā, e, o	a, ṃ	a, ā, e	i, e	i	ini, ī	i, ī
Accusative	aṃ	aṃ	aṃ	iṃ, inaṃ	asū, i(ṃ)	iṃ, inaṃ	iṃ
Instrumental	asā, aso, ā, ena	asā, aso, ā, ena	āya, ā	inā	inā	inā	iyā, yā
Ablative	amhā, aṃ, asmā, aso, ato, ā, āh, i	amhā, aṃ, asmā, aso, ato, ā, āh, i	ato, āto, āya	imhā, inā, ismā, ito	imhā, inā, ismā, ito	imhā, inā, ismā, ito	ito, iyā, yā
Genitive/Dative	assa, ā/ayā	assa, ā/ayā	āya	ino, issa	ino, issa	ino, issa	iyā, yā
Locative	amhi, asi, asmi(ṃ), e	amhi, asi, asmi(ṃ), e	āya(ṃ), āye	e, imhi, ini, ismiṃ, o	e, imhi, ini, ismiṃ, o	imhi, ine, ini, ismiṃ	(ā)yaṃ, iyaṃ, o, u, yaṃ
Gender, pl.	Masc.	Neut.	Fem.	Masc.	Neut.	Masc.	Fem.
Nominative	ā, āse, āso, o	ā, āni	ā, āyo	ayo, ino, iyo, ī	ī, īni	ayo, inā, ino, iyo, ī	iyo, ī, yā, yo
Vocative	ā, āse, āso	ā, āni	ā, āyo	ayo, iyo, ī	ī, īni	ino, ī	iyo, ī, yo

Table 3. Substantive Noun and Adjectival Declensions (stem vowels mostly included)

Stem	-ī	-u	-u	-u	-ū	-u	-ū	-u/-r
Gender, sing.	Fem.	Masc.	Neut.	Masc.	Fem.	Fem.	Fem.	Masc.
Nominative	i, ī	u, o	u, uṃ	u(m), ū (neut.)	u	u, ū	u, ū	a, ā, o
Vocative	i, ī	u, o	u, uṃ	u, ū	u	u, ū	u, ū	a, ā, e
Accusative	iṃ, iyaṃ	uṃ, unaṃ	u, uṃ	uṃ	uṃ	uṃ	uṃ	aṃ, araṃ, āraṃ, uṃ
Instrumental	ā, iṃ, iṃ, iṃ, yā	unā	unā	unā	uyā	uyā, ūyā	uyā, ūyā	arā, ārā, unā
Ablative	ā, īto, iṃ, iṃ, yā	u, umhā, unā, usmā, uto	u, umhā, unā, usmā, uto	umhā, usmā, ūto	uto, uyā	uyā	uyā	arā, ārā, īto, u
Genitive/Dative	ā, iṃ, iṃ, yā	u, uno, ussa	u, uno, ussa	uno, ussa	uyā	uyā	uyā	u, uno, ussa
Locative	aṃ, iyaṃ, iṃ, yā	u, umhi, usmiṃ	u, umhi, uni, usmiṃ	umhi, usmiṃ	uyam, uyā	uyam, uyā	uyam, uyā	ari

Table 3. Substantive Noun and Adjectival Declensions (stem vowels mostly included)

Gender pl.	Fem.	Masc.	Neut.	Masc.	Fem.	Fem.	Masc.
Nominative	āyo, iyo, īyo, yo	avo, uno, uyo, ū	ū, ūni	uno, uvo, ū, ūni, ūno	uvo, uyo, ū	uyo, ū, ūyo	aro, āro
Vocative	āyo, iyo, īyo, yo	ave, avo, uno, ū	ū, ūni	uno, uvo, ū, ūno	uvo, uyo, ū	uyo, ū, ūyo	āro
Accusative	āyo, iyo, īyo, yo	avo, uno, uyo, ū	ū, ūni	uno, uvo, ū, ūno	uvo, uyo, ū	uyo, ū, ūyo	are, aro, āre, āro, e, uno, ū
Instrumental	ībhi, īhi	ubhi, uhi, ūbhi, ūhi	ubhi, uhi, ūbhi, ūhi	ūbhi, ūhi	ūbhi, ūhi	ūbhi, ūhi	arebhi, ārehi, ārebhi, ārehi, ūbhi, ūhi
Ablative	ībhi, īhi	ubhi, uhi, ūbhi, ūhi	ubhi, uhi, ūbhi, ūhi	ūbhi, ūhi	ūbhi, ūhi	ūbhi, ūhi	arebhi, ārehi, ārebhi, ārehi, ubhi, uhi, ūbhi, ūhi
Genitive/Dative	inaṃ, iyaṇaṃ, īnaṃ, īyaṇaṃ	unaṃ, unnaṃ, ūnaṃ	unaṃ, unnaṃ, ūnaṃ	ūnaṃ	ūnaṃ	ūnaṃ	arāṇaṃ, ānaṃ, ārāṇaṃ, unnaṃ, ūnaṃ
Locative	īsu, īsu	usu, ūsu	usu, ūsu	ūsu	ūsu	ūsu	aresu, āresu, usu, ūsu

Table 3. Substantive Noun and Adjectival Declensions (stem vowels mostly included)

Stem	-u/-r	-a/-an	-a/-an	-m/vantu	-m/vantu	-as	-us
Gender, sing.	Fem.	Masc.	Neut.	Masc.	Neut.	Neut.	Neut.

Declensions – Pronouns

Table 4. Pronominal Declensions

PERSONAL PRONOUNS: 1. Person – Stem <i>ma(d)</i> , <i>mam</i> ; 2. Person – Stem <i>ta(d)</i>			
	Singular	Plural	
1. Person			
Nominative	<i>aḥaṇ (amhi, asmi, mhi)</i>	<i>amhā, amhe, mayañ, mayhaṇ, no, vayan</i>	
Accusative	<i>maṇ, mamaṇ, mayhaṇ, māṁ-, me</i>	<i>amhākaṇ, amhe, asmākaṇ, asme, no</i>	
Instrumental	<i>mayā, me</i>	<i>amhebbhi, amhehi, asmāhi, asmābbhi, no</i>	
Ablative	<i>mamato, mayā, me</i>	<i>amhebbhi, amhehi, asmāhi, asmābbhi, no</i>	
Gen./Dat.	<i>anhaṇ, mama(ṇ), mānā, maṇ, mayha(ṇ), me</i>	<i>anhaṇ, amhāka(ṇ), asmākaṇ, no (ne)</i>	
Locative	<i>mayi, me</i>	<i>amhesu, asmāsu, asmesu</i>	
2. Person			
Nominative	<i>taṇ, tuvaṇ, tvaṇ</i>	<i>tumhe, vo</i>	
Accusative	<i>taṇ, tavaṇ, tuvaṇ, tvaṇ, tyaṇ, te</i>	<i>tumhākaṇ, tumhe, vaṇ, ve, vo</i>	
Instrumental	<i>tayā, te, tvāya</i>	<i>tumhebbhi, tumhehi, vaṇ, ve, vo</i>	
Ablative	<i>tayā, te, tvāya</i>	<i>tumhebbhi, tumhehi</i>	

Table 4. Pronominal Declensions

Gen./Dat.	<i>tava(m), tayā, te, tumhaṃ, tuyha(m)</i>	<i>tumhaṃ, tumhāka(m), tuyhaṃ</i> (possibly), <i>vaṃ, ve, vo</i>
Locative	<i>tavi, tvayi</i>	<i>tumhesu</i>
DEMONSTRATIVE PERSONAL PRONOUNS – Stem <i>ta(d)</i> . Substitues in <i>n</i> are in Parentheses		
3. Person	Masculine Singular	Neuter Singular Feminine Singular
Nominative	<i>sa, se, so, sū</i>	<i>tad-, tadam, taṃ (naṃ), se</i> <i>sā</i>
Accusative	<i>taṃ (naṃ), te</i>	<i>tad-, taṃ (naṃ), se</i> <i>taṃ</i>
Instrumental	<i>tena (nena)</i>	<i>tena (nena)</i> <i>tāya (nāya)</i>
Ablative	<i>tamhā, tasmā (nasmā), tato, tāto</i>	<i>tamhā, tasmā (nasmā), tato, tāto</i> <i>tāya (nāya)</i>
Gen./Dat.	<i>asmā, assa, tassa (nassa), tāya (dat.)</i>	<i>asmā, assa, tassa (nassa), tāya (dat.)</i> <i>assā, tassā (nassā), tassāya (nassāya), tāya, tissā, tissāya</i>
Locative	<i>asmiṃ, tamhi, tamhī, tasmīṃ (nasmīṃ)</i>	<i>asmiṃ, tamhi, tamhī, tasmīṃ (nasmīṃ)</i> <i>assam, tassam, tāsam (nassam), tāya(m) (nāyam), tissam</i>
3. Person	Masculine Plural	Neuter Plural Feminine Plural
Nominative	<i>te (ne)</i>	<i>tāni</i> <i>tā, tāyo</i>
Accusative	<i>te (ne)</i>	<i>tāni</i> <i>tā (nā), tāyo</i>
Instrumental	<i>tebhi, tehi (nehi)</i>	<i>tebhi, tehi (nehi)</i> <i>tābhi, tāhi (nāhi)</i>
Ablative	<i>tebhi, tehi (nehi)</i>	<i>tebhi, tehi (nehi)</i> <i>tābhi, tāhi (nāhi)</i>

Table 4. Pronominal Declensions

Gen./Dat.	<i>tesaṃ (nesaṃ), tesānaṃ</i>	<i>tesaṃ (nesaṃ), tesānaṃ</i>	<i>tāsaṃ (nāsaṃ), tāśānaṃ, sānaṃ</i>
Locative	<i>tesu (nesu)</i>	<i>tesu (nesu)</i>	<i>tāsu (nāsu)</i>

DEMONSTRATIVE PERSONAL PRONOUNS – Stem <i>eta(d)</i>			
3. Person	Masculine Singular	Neuter Singular	Feminine Singular
Nominative	<i>esa, eso, yo</i>	<i>etad-, etaṃ</i>	<i>eśā</i>
Accusative	<i>etaṃ</i>	<i>etad-, etaṃ</i>	<i>etaṃ</i>
Instrumental	<i>etena</i>	<i>etena</i>	<i>etāya</i>
Ablative	<i>etamhā, etasmā</i>	<i>etamhā, etasmā</i>	
Gen./Dat.	<i>etassa</i>	<i>etassa</i>	<i>etissa, etissā</i>
Locative	<i>etamhi, etasmiṇ</i>	<i>etamhi, etasmiṇ</i>	

3. Person	Masculine Plural	Neuter Plural	Feminine Plural
Nominative	<i>ete</i>	<i>etāni</i>	<i>etā, etāyo</i>
Accusative	<i>ete</i>	<i>etāni</i>	<i>etā, etāyo</i>
Instrumental	<i>etehi</i>	<i>etehi</i>	<i>etāhi</i>
Ablative	<i>etehi</i>	<i>etehi</i>	<i>etāhi</i>
Gen./Dat.	<i>etesaṃ, etesānaṃ</i>	<i>etesaṃ, etesānaṃ</i>	<i>etāsaṃ</i>
Locative	<i>etesu</i>	<i>etesu</i>	<i>etāsu</i>

Table 4. Pronominal Declensions

DEMONSTRATIVE PRONOUNS – Stem <i>ima</i>			
	Masculine Singular	Neuter Singular	Feminine Singular
Nominative	ayaṇ	idaṇ, imaṇ	ayaṇ
Accusative	imaṇ	idaṇ, imaṇ	imaṇ
Instrumental	aminā, anena, imena, iminā	aminā, anena, imena, iminā	asnā, imāya
Ablative	amhā, asmā, imanhā, imasma	amhā, asmā, imanhā, imasma	asmā, assā, assāya, imāya, imissā, imissāya
Gen./Dat.	assa, imassa, imissa	assa, imassa	imāya
Locative	amhi, asmiṇ, imamhi, imasmi(m)	asmiṇ, imamhi, imasmiṇ	assaṇ, imāsaṇ, imāyaṇ, imissaṇ, imissā

	Masculine Plural	Neuter Plural	Feminine Plural
Nominative	ime	imāni	imā, imāyo
Accusative	ime	imāni	imā, imāyo
Instrumental	ebhi, ehi, imebhi, imehi	ebhi, ehi, imebhi, imehi	imābhi, imāhi
Ablative	ebhi, ehi, imebhi, imehi	ebhi, ehi, imebhi, imehi	imābhi, imāhi
Gen./Dat.	āsaṇ, esaṇ, esānaṇ, imesaṇ, imesānaṇ	āsaṇ, esaṇ, esānaṇ, imesaṇ, imesānaṇ	āsaṇ, imāsaṇ, imāsaṇaṇ
Locative	āsaṇ, esu, imesu	āsaṇ, esu, imesu	āsaṇ, imāsaṇ, imāsu

Table 4. Pronominal Declensions

DEMONSTRATIVE PRONOUNS – Stem <i>amu</i>			
	Masculine Singular	Neuter Singular	Feminine Singular
Nominative	<i>amu, asu, asū</i>	<i>adum</i>	<i>asu</i>
Accusative	<i>amum</i>	<i>adum, amum</i>	<i>amum</i>
Instrumental	<i>amunā</i>	<i>amunā</i>	<i>amuyā</i>
Ablative	<i>amumhā, amusmā</i>	<i>amumhā, amusmā</i>	<i>amuyā</i>
Gen./Dat.	<i>adussa, amussa</i>	<i>adussa, amussa</i>	<i>amussā, amuyā</i>
Locative	<i>amumhi, amusmiṇ</i>	<i>amumhi, amusmiṇ</i>	<i>amussan, amuyan</i>
	Masculine Plural	Neuter Plural	Feminine Plural
Nominative	<i>amuyo, amū</i>	<i>amū, amūni</i>	<i>amuyo, amū</i>
Accusative	<i>amuyo, amū</i>	<i>amuyo, amū</i>	<i>amuyo, amū</i>
Instrumental	<i>amūbhi, amūhi</i>	<i>amūbhi, amūhi</i>	<i>amūbhi, amūhi</i>
Ablative	<i>amūbhi, amūhi</i>	<i>amūbhi, amūhi</i>	<i>amūbhi, amūhi</i>
Gen./Dat.	<i>amūsān, amūsānaṇ</i>	<i>amūsān, amūsānaṇ</i>	<i>amūsān, amūsānaṇ</i>
Locative	<i>amūsu</i>	<i>amūsu</i>	<i>amūsu</i>

Table 4. Pronominal Declensions

RELATIVE PRONOUNS – Stem <i>ya(d)</i>			
	Masculine Singular	Neuter Singular	Feminine Singular
Nominative	<i>yo</i>	<i>yad-, yaṇ</i>	<i>yā</i>
Accusative	<i>yaṇ</i>	<i>yad-, yaṇ</i>	<i>yaṇ</i>
Instrumental	<i>yena</i>	<i>yena</i>	<i>yāya</i>
Ablative	<i>yamhā, yasmā</i>	<i>yamhā, yasmā</i>	<i>yāya</i>
Gen./Dat.	<i>yassa</i>	<i>yassa</i>	<i>yassā, yāya</i>
Locative	<i>yamhi, yasmim</i>	<i>yamhi, yasmim</i>	<i>yassam, yāya, yāyaṇ</i>
	Masculine Plural	Neuter Plural	Feminine Plural
Nominative	<i>ye</i>	<i>yāni</i>	<i>yā</i>
Accusative	<i>ye</i>	<i>yāni</i>	<i>yā</i>
Instrumental	<i>yebhi, yehi</i>	<i>yebhi, yehi</i>	<i>yāhi</i>
Ablative	<i>yebhi, yehi</i>	<i>yebhi, yehi</i>	<i>yāhi</i>
Gen./Dat.	<i>yesam, yesānam</i>	<i>yesam, yesānam</i>	<i>yāsam, yāsānam</i>
Locative	<i>yesu</i>	<i>yesu</i>	<i>yāsu</i>

Table 4. Pronominal Declensions

INTERROGATIVE PRONOUNS – Stem <i>ka</i>			
	Masculine Singular	Neuter Singular	Feminine Singular
Nominative	<i>ko, ke</i>	<i>kiṃ</i>	<i>kā</i>
Accusative	<i>kaṃ, kiṃ</i>	<i>kiṃ</i>	<i>kaṃ</i>
Instrumental	<i>kena</i>	<i>kena</i>	<i>kāya</i>
Ablative	<i>kasmā, kismā</i>	<i>kasmā, kismā</i>	<i>kāya</i>
Gen./Dat.	<i>kassa, kissa</i>	<i>kassa, kissa</i>	<i>kassā, kāya, kissā</i>
Locative	<i>kaṃhi, kasmīṃ, kismīṃ</i>	<i>kaṃhi, kasmīṃ, kismīṃ</i>	<i>kayaṃ, kāya, kissaṃ</i>
	Masculine Plural	Neuter Plural	Feminine Plural
Nominative	<i>ke</i>	<i>kāni</i>	<i>kā, kāyo</i>
Accusative	<i>ke</i>	<i>kāni</i>	<i>kā, kāyo</i>
Instrumental	<i>kebhi, kehi</i>	<i>kebhi, kehi</i>	<i>kāhi</i>
Ablative	<i>kebhi, kehi</i>	<i>kebhi, kehi</i>	<i>kāhi</i>
Gen./Dat.	<i>kesaṃ, kesānaṃ</i>	<i>kesaṃ, kesānaṃ</i>	<i>kāsaṃ, kāsānaṃ</i>
Locative	<i>kesu</i>	<i>kesu</i>	<i>kāsu</i>

Table 4. Pronominal Declensions

INDEFINITE PRONOUNS – <i>ka</i> + suffix <i>-ci</i>				
	Masculine Singular	Neuter Singular	Feminine Singular	
Nominative	<i>koci</i>	<i>kiñci</i>	<i>kāci</i>	
Accusative	<i>kañci, kiñci</i>	<i>kiñci</i>	<i>kañci</i>	
Instrumental	<i>kenaci</i>	<i>kenaci</i>	<i>kāyaci</i>	
Ablative	<i>kasmāci</i>	<i>kasmāci</i>	<i>kāyaci</i>	
Gen./Dat.	<i>kassaci</i>	<i>kassaci</i>	<i>kassāci, kāyaci</i>	
Locative	<i>kamhici, kamiñci, kimhici, kismiñci</i>	<i>kamhici, kamiñci, kimhici, kismiñci</i>	<i>kassañci, kāyaci, kāyañci</i>	
	Masculine Plural	Neuter Plural	Feminine Plural	
Nominative	<i>keci</i>	<i>kāñici</i>	<i>kāci, kāyoci</i>	
Accusative	<i>keci</i>	<i>kāñici</i>	<i>kāci, kāyoci</i>	
Instrumental	<i>kehici</i>	<i>kehici</i>	<i>kāñici</i>	
Ablative	<i>kehici</i>	<i>kehici</i>	<i>kāñici</i>	
Gen./Dat.	<i>kesañci</i>	<i>kesañci</i>	<i>kāsañci</i>	
Locative	<i>kesuci</i>	<i>kesuci</i>	<i>kāsuci</i>	

Table 4. Pronominal Declensions

DEFECTIVE PRONOUNS – Stem <i>na</i>			
	Masculine Singular	Neuter Singular	Feminine Singular
Accusative	<i>naṃ, ena(m)</i>	<i>naṃ, ena(m)</i>	<i>naṃ, enaṃ</i>
Gen./Dat.	<i>nassa</i>	<i>nassa</i>	
	Masculine Plural	Neuter Plural	Feminine Plural
Accusative	<i>ne</i>		
Gen./Dat.	<i>nesaṃ</i>

ABOUT PARIYATTI

Pariyatti is dedicated to providing affordable access to authentic teachings of the Buddha about the Dhamma theory (*pariyatti*) and practice (*paṭipatti*) of Vipassana meditation. A 501(c)(3) non-profit charitable organization since 2002, Pariyatti is sustained by contributions from individuals who appreciate and want to share the incalculable value of the Dhamma teachings. We invite you to visit www.pariyatti.org to learn about our programs, services, and ways to support publishing and other undertakings.

Pariyatti Publishing Imprints

Vipassana Research Publications (focus on Vipassana as taught by
S.N. Goenka in the tradition of Sayagyi U Ba Khin)

BPS Pariyatti Editions (selected titles from the Buddhist Publication
Society, copublished by Pariyatti)

MPA Pariyatti Editions (selected titles from the Myanmar Pitaka Association,
copublished by Pariyatti)

Pariyatti Digital Editions (audio and video titles, including discourses)

Pariyatti Press (classic titles returned to print and inspirational writing
by contemporary authors)

Pariyatti enriches the world by

- disseminating the words of the Buddha,
- providing sustenance for the seeker's journey,
- illuminating the meditator's path.
